Our Australian team understands the global language of business.

Baker McKenzie is unique among law firms in our ability to deliver the knowledge, experience and capabilities of our global network to our clients in the local market. Companies benchmark themselves against the best practice in their sectors, globally, not just domestically. We provide our clients with the innovative legal solutions they expect from the global top-tier law firm, together with commercial pragmatism and seasoned experience.

The results speak the global language of success.

Baker McKenzie’s Australian lawyers have advised on many of the headline Australian transactions of the last five decades. We continue to bring the experience of our global classroom to our clients in Australia through every transaction. We actively ensure that we have harnessed the best legal solution as tested through our global network, which currently comprises 77 offices in 47 jurisdictions globally. In Australia we have offices situated in Brisbane, Melbourne and Sydney. Our growth has been organic, giving us a strong, common culture that runs through our firm. For six decades we have followed clients into new markets, each time establishing offices driven by local lawyers and talent.

Foreword

Welcome to the 2016 edition of Baker McKenzie’s Doing Business in Australia Guide. In 1964, we established Australia’s first global law firm in Australia. Since then, we have been a key adviser to Australia’s most established and respected companies, financial institutions and government organisations. Our long experience in this market means that we have established strong relationships with relevant regulators at a federal, state and territory level.

The purpose of this publication is to provide a practical guide to the legal framework within which business is conducted in Australia. We hope that it also will be of use to those seeking a general understanding of regulations and compliance issues across the Australian legal landscape. Please note that Doing Business in Australia is not a substitute for taking legal advice about your company’s circumstances.

In this Guide, we discuss the foreign investment criteria, the forms of business organisation and company regulation, taxation, and banking and finance regulations a company needs to consider when doing business in Australia.

We also discuss other relevant considerations, including intellectual property, trade practices and consumer protection, employment and labour law, immigration and visa requirements, tariff and customs regulations, real property, and environmental law.

Doing Business in Australia has been written by lawyers in a number of our specialist practice groups in our offices in Brisbane, Melbourne and Sydney who have considerable experience in advising companies that are considering, and engaging in, commercial activities in this country. We are well placed to understand the needs of foreign investors, and address the most fundamental of investors’ concerns in this Guide.

We hope that you find it a useful and practical resource tool and welcome any comments on this Guide.

Chris Freeland
National Managing Partner
Australian offices

Australia - An overview
1. **Australia – An overview**

**Our Government**

The Commonwealth of Australia comprises a federation of six States: New South Wales, Queensland, South Australia, Tasmania, Victoria and Western Australia, and two major mainland territories, the Northern Territory and the Australian Capital Territory and a number of minor territories.

Australia obtained de-facto independence from Great Britain in 1901, when the Federation was formed and the Australian Constitution was adopted. Full independence was formally achieved in 1986. Since Federation, Australia has enjoyed a history of stable government based on a parliamentary system similar to the British Westminster system, where the government exercises executive authority but is directed by and accountable to the parliament via the head of government (known as the Prime Minister) and his or her ministers.

Whilst independent, Australia continues to be a constitutional monarchy with Queen Elizabeth II as its current ceremonial head of state. The Queen is represented by a Governor General, who is appointed by the Queen on the advice of the Prime Minister.

**Economy and industries**

In its 25th year of uninterrupted annual growth, Australia offers significant opportunities for foreign investment in a range of growth sectors, including in agribusiness, education, tourism, mining and wealth management. Investors regard Australia as an excellent place to invest because of its population growth, highly skilled workforce, strategic location, strong record of economic growth and stable governance and regulatory environment.

Australia’s economy is primarily services-based, although in recent years it has enjoyed the success of a strong resources sector. Australia is a major global commodity producer of natural resources such as coal, iron ore, uranium, gold and natural gas. The five biggest industries in Australia are financial and insurance services, mining, construction, manufacturing and scientific and technical services. Other significant industries include education, agriculture, forestry and fishing.
Australia is open for business as a major trading nation. Seven nations in the Asia region are now top 10 trading partners, including China, Japan, South Korea, Singapore, New Zealand, Malaysia, Thailand, USA, United Kingdom and Germany. Australia is also a major attraction for foreign investors, and was ranked as the world’s tenth most attractive destination for foreign direct investment (FDI) in 2015.

Australia has built up bilateral trade relationships with Japan, Indonesia, Malaysia, China and the United Arab Emirates over many years. It is party to a number of Free Trade Agreements (FTAs), notably with the United States, China, Japan and Korea.

The Federal and State systems

Overview
There are three levels of government in Australia: Federal, State and Local. Australia has a Westminster system of government (based on the United Kingdom) and an independent judiciary.

Australia is a representative parliamentary democracy. Therefore, members of Federal and State Parliaments (and Local Governments) are chosen from and elected by the people. Voting is compulsory for Australian citizens from the age of 18 in Federal, State and Local Government elections.

Foreign companies doing business in Australia must comply with laws made by all three levels of government. If operating in multiple states and territories, businesses should also be aware that applicable state/territory laws can be different from each other, and so the business may have to comply with different legal/regulatory arrangements in different states or territories.

Division of Powers
The Australian Constitution governs the division of powers between the Federal and State Parliaments. Generally, the Federal Parliament is vested with specified powers to legislate in areas such as defence, foreign affairs, immigration, taxation, customs and currency, as well as corporations, interstate and overseas trade and commerce, bankruptcy and insolvency, communications, banking, insurance, intellectual property and industrial relations. Remaining powers are vested in
the State Parliaments, which have the right to legislate on all matters that the Australian Constitution does not consign exclusively to the Federal Parliament.

The State Governments are mainly responsible for day-to-day matters such as justice (including most criminal and commercial law), education, health, housing, police, agriculture, lands, forests, water, mineral resources and transportation (but not family law). Although the Federal Government is the main taxation authority, the State Governments also raise revenue by means of various duties, levies and royalties (e.g. mining royalties, property duties). The Australian Government funds many State activities and functions, often attaching conditions to the use of funds.

There are three levels of government in Australia: Federal, State and Local. There are three “arms” of each Federal and State Government:

– The legislature (or parliament) is responsible for debating and voting on new laws to be introduced.

– The executive is responsible for enacting and upholding the laws established by parliament. Certain members of parliament (i.e. ministers) are also members of the executive, with special responsibilities for certain areas of the law.

– The judiciary is responsible for enforcing the laws and deciding whether the other two arms are acting within their powers. It is independent of the other two arms.

**Federal (also known as Commonwealth)**

Federal legislative power is vested in the Federal Parliament which consists of the House of Representatives (the lower house) and the Senate (the upper house). The party which holds the majority of seats in the lower house forms the Federal Government, and the leader of the majority party becomes the Prime Minister. Executive power is exercised by the Cabinet, which comprises of Ministers drawn from the majority party candidates elected into parliament and headed by the Prime Minister.
State Government

At the State level, each State has their own constitution and each State Government has power to govern and to pass laws within the State so long as it is consistent with their respective constitution and are not matters controlled by the Commonwealth under the Constitution. The parliaments of each State, except Queensland, also have two chambers, a lower house and an upper house. Again, executive power is exercised by the State Cabinet which is headed by the Premier, who is the leader of the majority party in the lower house.

Local Government

Local governments are established by State governments to take responsibility for certain community services and derive their authority from statutes passed by State Parliaments. Local governments have a legislative body and an executive body, but not a judiciary. Local governments regulate local community matters such as property zoning and planning, local environment (e.g. waste collection) and public recreation facilities. They raise revenue by levying rates on land ownership.

The legal system

Australia’s legal system is inherited from the British model where laws are created and amended not only by the Federal and State parliaments and territories, but also through the decisions of the courts, who are independent from the parliament and the executive. This judge-made law, also known as “common law” or “case law”, is binding on future court decisions unless there are distinguishing features from the prior decisions, or a higher court has overruled the prior decisions.

Australia has both a federal and state system of courts. The system is headed by the High Court of Australia which decides all constitutional matters and is the country’s final court of appeal from both Federal and State courts. The Federal Court of Australia, the Federal Circuit Court and the Family Court form the other branches of the federal system of courts. The Federal courts have jurisdiction to decide all matters of Federal law such as corporations law and interstate trade and commerce, copyright, trade marks and patents, competition and consumer law, immigration, insolvency and bankruptcy and family law.
The State court systems each comprise a Supreme Court and minor courts (at local and district levels). They have the jurisdiction to decide all matters of State law (such as criminal and property law) but in many cases also have the right to hear Federal matters.
Foreign Investment – Regulations and Government Policy
2. Foreign Investment – Regulations and Government Policy

Overview

Foreign investments in Australian entities, businesses and land are regulated by the Foreign Acquisitions and Takeovers Act 1975 (Cth) (FATA), the Foreign Acquisitions and Takeovers Fees Imposition Act 2015 (Cth), the Foreign Acquisitions and Takeovers Regulations 2015 (Cth) (Regulations) and Australia’s Foreign Investment Policy (Policy). The foreign investment regime was recently overhauled with significant amendments to the FATA and Regulations taking effect on 1 December 2015.

The Foreign Investment Review Board (FIRB) administers the FATA, Regulations and the Policy and assists the Treasurer to make decisions on foreign investment proposals submitted for examination and approval.

Approval may be required under the FATA if a “foreign person” or “foreign government investor” is involved in an acquisition of an entity, business or land in Australia.

Who is a foreign person?

Under the FATA, a “foreign person” includes:

− an individual not ordinarily resident in Australia;
− a corporation in which an individual not ordinarily resident in Australia, a foreign corporation or a foreign government investor holds a substantial interest (i.e. a share holding of 20% or more);
− a corporation in which two or more persons, each of whom is an individual not ordinarily resident in Australia, a foreign corporation or a foreign government investor, hold an aggregate substantial interest (i.e. a total share holding of 40% or more);
− the trustee of a trust in which an individual not ordinarily resident in Australia, a foreign corporation or a foreign government investor holds a substantial interest of 20% or more;
− the trustee of a trust in which two or more persons, each of whom is an individual not ordinarily resident in Australia, a foreign corporation or a foreign government investor, hold an aggregate substantial interest of 40% or more; or
– a foreign government or foreign government investor, which includes a corporation or other entity in which a foreign government or other foreign government investor holds a substantial interest of 20% or more or two or more foreign governments or foreign government investors which hold an aggregate substantial interest of 40% or more (see below).

**Who is a Foreign Government Investor?**

There is greater scrutiny of investments by foreign government investors, given that such acquisitions may be more likely to raise national interest considerations.

A person will be a “foreign government investor” if the person is:

– a foreign government or separate government entity; or

– a corporation, trustee of a trust or general partner of a limited partnership in which a foreign government or separate government entity, alone or together with one or more associates, holds a substantial interest (i.e. 20% or more), or in which foreign governments or separate government entities of more than one foreign country, together with their associates hold an aggregate substantial interest (i.e. 40% or more).

In determining whether substantial interest or an aggregate substantial interest exists the FATA deems all foreign government investors from a single country to be associates. This is also relevant both for determining whether the definition of foreign government investor applies and is also applicable in determining whether the transaction involves a notifiable acquisition of a direct interest by a foreign government investor and its associates.

One of the main implications of being a foreign government investor is that the monetary thresholds discussed below do not apply to their investments. This means that regardless of the value of the investment, all foreign government investors must get prior approval from FIRB before:

– acquiring a direct interest in an Australian entity or business, such as a shareholding of 10% or more;

– starting an Australian business;

– acquiring a legal or equitable interest in an exploration, mining or production tenement or an interest of at least 10% in securities of a mining, production or exploration entity; or

– acquiring an interest in land.
Notification to FIRB

Under the FATA, there are two categories of transactions:

- “notifiable actions”; and
- “significant actions”.

Only notifiable actions must be mandatorily notified to the Treasurer and failure to do so constitutes an offence.

It is not compulsory to notify the Treasurer of significant actions. However, if the Treasurer is not notified, the Treasurer may block, unwind or place conditions on a significant action if such transaction is considered by the Treasurer to be contrary to the national interest.

In addition, investments in certain sectors are subject to more stringent requirements, including investments in the telecommunications and media sectors. For instance, an investment in 5% or more in an entity or business in the media sector will require FIRB approval, regardless of size.

Notifiable actions

Subject to the threshold tests being met (see below), the following are transactions which must be mandatorily notified to FIRB for approval:

- the acquisition by a foreign person of a “direct interest” in an Australian corporation, Australian unit trust or holding entity of an Australian corporation or unit trust, that carries on agribusiness;
- the acquisition by a foreign person of a “substantial interest” in an Australian corporation, Australian unit trust or holding entity of an Australian corporation or unit trust (which is not agribusiness); or
- the acquisition by a foreign person of an interest in Australian land, subject to certain exemptions (see below).

A person acquires a “direct interest” in an Australian entity or business if it acquires:

- an interest of at least 10% in the entity or business;
- an interest of at least 5% in the entity or business and has also entered into a legal arrangement relating to the person’s business and the entity or business (such as an agreement to secure the offtake of commodities); or
an interest of any percentage in the entity or business if the person is in a position to influence or participate in the central management and control of the entity or business, or influence, participate in, or determine the policy of the entity or business.

A person holds a “substantial interest” in an entity, business or trust if the person (and its associates) holds an interest of at least 20% in the entity or business, or for a trust (including a unit trust) if the person (and its associates) holds a beneficial interest in at least 20% of the income or property of the trust. If there are two or more foreign persons involved, then they will hold an “aggregate substantial interest” in an entity, business or trust if they (and their associates) hold at least 40% of an entity, business or trust.

There are also tracking provisions which may mean that even an acquisition completed outside Australia may fall within the FATA requirements, if the relevant group of companies or business includes an Australian entity or business that meets the necessary threshold requirements.

**Significant actions**

Some notifiable actions like an acquisition of an interest in Australian land or of a direct interest in an agribusiness are also classified as significant actions.

Additionally, subject to the threshold tests being met, a foreign investment is a “significant action” if it involves:

- the acquisition of an interest in an Australian business or in securities of an Australian entity, even if it is less than a substantial interest of 20%;
- entering into certain agreements or altering the constituent documents of an Australian entity which enables a foreign person to control senior officers of the entity; or
- entering into or terminating significant agreements with an Australian business (i.e. agreements relating to using the assets of the business or participating in its profits or management and control).

Further, for a transaction involving an Australian entity or business to be a significant action, it will generally require a “change of control” as a result of the transaction. This condition, however, does not apply to the acquisition of an Australian agribusiness.
Threshold tests

Even if a transaction is within one of the categories of actions discussed above, it will only be a notifiable action or significant action if the value of the transaction, entity or business exceeds the monetary thresholds in the table below.

In some instances, higher thresholds apply for investments in sectors other than sensitive businesses (e.g. defence and media) for "agreement country investors" such as countries with which Australia has a Free Trade Agreement. Currently this comprises investors from the US, New Zealand, Chile, Japan, South Korea and China.

These thresholds do not apply to foreign government investors so they will have to notify and obtain approval from FIRB for such investments and actions, regardless of their value.

Transactions or actions which exceed these thresholds will need to be notified and approved under the FATA, unless a relevant exemption applies.

Most of these threshold amounts (other than for agricultural land) are indexed so that they will increase annually each calendar year, based on Australian inflation rates.

**Agribusiness**

Previously, foreign investment in agribusiness was subject to the same thresholds that applied to other foreign acquisitions of Australian entities or business assets.

From 1 December 2015, foreign persons (other than foreign government investors or agreement country investors) who propose to enter into an agreement to acquire a direct interest in an agribusiness where the value of the investment is more than A$55 million are required to notify FIRB and obtain approval for the investment.

Consistent with prior policy, all proposed direct investments by foreign government investors, including in agribusiness, will require approval regardless of value.

An “agribusiness” is defined by reference to specified and well recognised industry classifications as set out in the Australian and New Zealand Standard Industrial Classification Codes. These industry classifications include agriculture, forestry, fishing and also most food manufacturing or what has been described as “first stage downstream manufacturing”.

A business or entity will be considered an agribusiness if the business or entity (or a subsidiary of the entity) carries on such activities and where at least 25% of the value of such assets of the business/entity are used in, or at least 25% of the earnings are derived from, carrying on such activities.

Investments in agribusiness by foreign persons are required to be notified to FIRB where they involve the acquisition of a “direct interest”, being:

- an interest of at least 10% in the agribusiness entity or business;
- an interest of at least 5% in the agribusiness entity or business, where there is also a legal arrangement which relates to the businesses of the investor and the agribusiness, such as an agreement to secure the offtake of commodities produced by an agribusiness; or
- any interest where the investor is in a position to influence or participate in the central management and control of the agribusiness entity or business or is in a position to influence, participate in or determine its policy.

While the direct interest test involves a lower threshold than the substantial interest test (which applies to a non-agribusiness acquisition), the tracing provisions, under which a substantial interest in a corporation or trust is traced up through the chain of ownership, do not apply in determining whether the acquisition of a direct interest in an agribusiness is a notifiable action.
**Australian land**

Proposals involving the acquisition of interests in Australian land by foreign persons are subject to rigorous scrutiny. Under the FATA “Australian land” is now divided into four categories, namely, agricultural land, commercial land, residential land and mining / production tenements:

- “Agricultural land” refers to land used, or that could reasonably be used, for a primary production business (e.g. a business cultivating or propagating plants, maintaining animals for the purpose of selling them or their bodily product, planning or tending trees in a plantation or forest that are intended to be felled). The Australian Tax Office (ATO) has set up and maintains an agricultural land register to track foreign ownership of agricultural land. Regardless of whether approval is required, the acquisition by foreign persons of all freehold interests, and leasehold interests likely to exceed five years, in agricultural land now need to be notified to the ATO.

- “Commercial land” means land in Australia other than residential land or land used wholly and exclusively for a primary production business.

- “Vacant land” means land that has no current or planned use.

- “Residential land” means land in Australia that has at least one dwelling but is not commercial land or agricultural land. Different types of residential land have different treatment under the FATA. For example, the acquisition of existing residential dwellings by a foreign person is generally prohibited. However, a foreign person wishing to acquire an interest in residential land may apply for an exemption on the basis that the acquisition is not contrary to national interest (see below for more information about exemptions).

**“Interest” in Australian land**

The definition of an “interest” in Australian land is extremely wide and includes options over freehold land, leases with a term exceeding five years (including any option for a further term) and any financing or other arrangements for the sharing of profits from investment in Australian land. Further, any proposed foreign investment in an Australian land corporation or Australian land trust (other than an agricultural land corporation or agricultural land trust), will also require prior FIRB approval. An Australian land company or an Australian land trust is a company or trust whose value of interests in Australian land exceed 50% of their assets.
**Exemptions**

Proposals involving the acquisition of interests in Australian land by foreign persons that fall within specific exemptions do not require FIRB approval. The major exemptions include:

- pre-approval for off-the-plan sales: a developer may apply for a residential development "exemption certificate" if they propose to acquire or have acquired land and propose to sell to foreign persons the new dwellings that will be or have been built on that land. The exemption certificate will specify the developer and the interest to which the certificate relates and will allow foreign purchasers to acquire dwellings in the development without the need for their own approval. The development must however involve new dwellings of 100 or more and a single investor may only rely on the exemption certificate for acquisitions of up to A$3 million in any one development. A foreign investor wishing to purchase apartments over this value will need to seek individual approval;

- annual program certificates: a foreign investor may apply for an exemption certificate to obtain advance approval for a 12 month program of acquisitions of Australian land, relieving them of the requirement to notify and seek FIRB approval for each individual acquisition within that period. It is within FIRB's discretion whether or not to grant the exemption, and FIRB will assess each application on a case by case basis;

- passive investments: a passive investment in Australian land that is an acquisition of an interest of less than 10% in shares or units in a listed land entity (including an Australian land corporation or Australian land trust) or an acquisition of an interest of less than 5% in shares or units in an unlisted land entity (including an Australian land corporation or Australian land trust) does not require FIRB approval;

- visa holders: acquisitions of residential property by foreign persons who hold permanent visas or are eligible to hold a “special category visa” (i.e. New Zealand citizens), or by foreign persons purchasing, as joint tenants with their Australian-citizen spouse;

- acquisitions from government: acquisitions of an interest in Australian land from Commonwealth, State, Territory or Local Government do not require FIRB approval; and

- time share schemes: acquisitions of an interest in a time-share scheme where the entitlement of the foreign person and any of that person's associates does not exceed an aggregate of four weeks in any year do not require FIRB approval.
Commonly approved investments in Australian land

Proposals of the following nature will normally be approved by FIRB unless judged contrary to the national interest:

- acquisitions of vacant land for development subject to conditions requiring continuous substantial construction to commence within five years and a minimum of 50% of the acquisition cost or market value of the land (whichever the greater) must be spent on the development;

- acquisitions of developed non-residential commercial real estate (including hotels, motels, hostels and guesthouses) valued above the relevant monetary thresholds are normally approved unless they are determined to be contrary to the national interest; and

- acquisitions of developed residential real estate by foreign-owned companies operating in Australia for the purpose of providing accommodation for their employees resident in Australia, provided that the accommodation is sold or rented out if it is expected to remain vacant for six months or more.

Mining and oil and gas

Investments in Australian mining and oil and gas tenements may require FIRB approval depending on the type of the tenement and value of the investment.

Acquisitions of interests in an exploration tenement by foreign persons (other than foreign government investors) are generally not notifiable or significant actions, regardless of the value of the tenement, unless the interest also constitutes an interest in Australian land such as a long term lease over the property on which exploration will take place.

Acquisitions of interests in a mining or production tenement by foreign persons (excluding certain agreement country investors) are notifiable and significant actions regardless of the value, except if acquired directly from the Australian Government. For acquisitions by non government investors from the US, New Zealand and Chile, a higher threshold of A$1,094 million applies.
Sensitive businesses

To reflect national security concerns and interest regarding investments by foreign persons in certain sectors, there are specific restrictions on foreign investment in "sensitive businesses" and depending on the nature of the investment, different monetary thresholds or other requirements may apply. The following are prescribed sensitive businesses:

- a business carried on wholly or partly in the media sector, telecommunications sector or transport sector (including a business relating to infrastructure for those sectors);
- a business that wholly or partly involves:
  - the supply of training or human resources, the manufacture of military goods, equipment or technology for, or the supply of military goods, equipment or technology to the Australian Defence Force or other defence forces;
  - the manufacture or supply of goods, equipment or technology able to be used for a military purpose;
  - the development, manufacture or supply of, or the provision of services relating to encryption and security technologies and communications systems; or
  - the extraction of (or the holding of rights to extract) uranium or plutonium or the operation of a nuclear facility.

Media

All proposals by foreign persons to invest in at least 5% in an Australian media business (including newspapers, television and radio), irrespective of value, are subject to prior approval by FIRB.

Airports

Proposed acquisitions of interests in Australian airports by foreign persons will be examined on a case by case basis in accordance with the standard FIRB notification and approval requirements. In addition, some major airports are also subject to the Airports Act 1996 (Cth), which provides for a 49% foreign ownership limit, a 5% airline ownership limit and a 15% limit on cross-ownership between Sydney airport (together with Sydney West) and Melbourne, Brisbane and Perth airports.
Critical Infrastructure

Some acquisitions by investors, other than Foreign Government Investors, from State and Territory Governments are not subject to FIRB review. However, FIRB review and approval is required for acquisitions by all foreign investors of critical infrastructure assets sold by State and Territory Governments, with a focus on national security.

Critical infrastructure assets include:

- public infrastructure (such as an airport or airport site, a port, infrastructure for public transport, electricity, gas, water and sewerage systems);
- existing and proposed roads, railways, inter-modal transfer facilities that are part of the National Land Transport Network or are designated by a State or Territory Government as significant or controlled by the Government;
- telecommunications infrastructure; and
- nuclear facilities.

FIRB approval will also be required for acquisitions of Australian entities and businesses which hold interests in such critical infrastructure assets.

This will be particularly relevant to acquisitions of key assets sold as part of Government privatisation transactions.

Financing transactions

The FATA now makes it easier for foreign persons to take and enforce security over Australian assets as part of financing transactions.

Previously the enforcement of a security interest over an Australian business, securities or land was deemed to be the acquisition of a direct interest and subject to prior FIRB approval. However, from 1 December 2015 approval is not required for enforcement of a security interest where:

- the interest is held solely by way of security, or acquired by way of enforcement of a security held solely, for the purposes of a moneylending agreement; and
- the holder or acquirer of the interest is:
  » the entity (Lender) that provided money or financial accommodation under the moneylending agreement;
» a subsidiary or holding entity of the Lender or a person who is (alone or with others) in a position to determine the investment policy of the Lender;
» a security trustee on behalf of the Lender; or
» a receiver, or a receiver and manager, appointed in relation to a person or entity referred to above.

For an interest in residential land, where the foreign person entering into the moneylending agreement is not a foreign government investor, this moneylending exemption applies only if that entity or a holding entity of that entity:

– is an approved deposit institution (ADI) or otherwise licensed (whether or not in Australia) as a financial institution; or

– has at least 100 holders of securities in it or is listed for quotation in the official list of a stock exchange (whether or not in Australia).

For a foreign government investor entering into a moneylending agreement, this moneylending exemption applies only if:

– the foreign government investor holds the interest for less than 12 months (if it is an ADI or a subsidiary of an ADI) or otherwise six months; or

– the foreign government investor is making a genuine attempt to dispose of the interest.

Examples of the kinds of actions that may constitute a genuine attempt to dispose of an interest include deciding on the method of disposal, and complying with any requirements of a law that apply before the interest can be disposed of.

**State regulation of foreign investment**

Although regulation of foreign investment remains primarily with the Federal Government, States have introduced measures to regulate foreign investment in areas such as gaming and real estate. For example, various states have requirements for foreign investors to register their interests in real estate or to pay a higher level of stamp duty on real estate acquisitions. In addition, FIRB will often consult with the relevant State Government in connection with proposals relating to activities in that State. A number of State Governments have released guides for investors which set out their attitude to various types of foreign investment in their respective State.
FIRB approval process

Making an application

If an application for approval under FATA is required, then the applications must be made in writing and submitted via the FIRB portal.

It is possible to enter into documentation for a transaction which will require FIRB approval, if the documentation is made conditional upon obtaining any necessary FIRB approval.

An application is made in the form of a letter and needs to include at least the information set out in the application checklist issued by FIRB, which includes matters such as:

- details of the parties, including whether the applicant or any of its associates is a foreign government investor;
- details of the proposed acquisition or investment, including whether it involves an entity, business and/or land;
- the consideration value and basis of calculation;
- the value of the entity, total assets or any interests in land;
- the rationale for the investment or acquisition, including the purchaser’s intention for the business;
- any submissions the applicant wishes to make in relation to national interest criteria;
- copies of transaction documents, any ownership structure diagrams or step plans; and
- copies of financial statements for the target entity or business.

Further information may also be required depending on the nature of the parties, acquisition or investment involved.

Review by FIRB

Once an application is made and the applicable fee has been paid, the Treasurer has 30 days to decide whether to approve or object to the foreign acquisition, and a further 10 days to notify the applicant of the decision. Generally, this is done by providing an applicant with a no objection notice. An interim order can be made extending the initial 30 day decision period for up to a further 90 days if the Treasurer considers that further time is required to assess the proposal. However to avoid any potential negative implications of an interim order, an applicant may request the Treasurer to extend the 30 day decision period.
FIRB has the power to prohibit notifiable actions, significant actions or investments by foreign investors if they are contrary to the “national interest”. There is no specific definition of the “national interest” in the FATA although the Policy does provide some guidance. When considering whether a foreign investment proposal is contrary to the national interest, the Treasurer and FIRB will consider factors such as the character of the investor, existing government policy and law (particularly tax), national security interests, competition, and any impact on Australia’s economic development and the community as a whole.

The Treasurer may impose conditions on any approval given in order to prevent the proposal from being contrary to Australia’s national interest. In particular, the Treasurer has indicated it is likely to impose tax conditions on certain transactions, particularly corporate restructurings, to ensure that investors fully comply with Australian tax requirements.

**Fees**

From 1 December 2015, the FATA imposes fees on FIRB applications on a “user pays” system. For example:

<table>
<thead>
<tr>
<th>Action</th>
<th>Fee</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acquisition involving an Australian business or a direct interest in an agribusiness investment valued at over A$1 billion</td>
<td>A$101,500</td>
</tr>
<tr>
<td>Acquisition involving an Australian business or a direct interest in an agribusiness investment where the consideration for the acquisition is A$1 billion or less</td>
<td>A$25,300</td>
</tr>
<tr>
<td>Internal reorganisation</td>
<td>A$10,100</td>
</tr>
<tr>
<td>Foreign government investor starting a business</td>
<td>A$10,100</td>
</tr>
<tr>
<td>Acquisition of developed commercial land (including heritage listed properties)</td>
<td>A$25,300</td>
</tr>
<tr>
<td>Acquisition (excluding internal reorganisations) where the fee would otherwise be more than 25% of the value of the investment</td>
<td>A$1,000</td>
</tr>
<tr>
<td>Application for an exemption certificate for land</td>
<td>A$25,300 minimum</td>
</tr>
</tbody>
</table>

Where multiple fees apply, the applicant is only required to pay the higher fee.
The applicable fee must be paid before an application will be considered and is non-refundable.

**Confidentiality**

FIRB recognises that most of the proposed foreign investment applications will contain “commercial-in-confidence” information.

The FATA contains confidentiality provisions under which FIRB is required to have in place processes to ensure the confidentiality of information provided by applicants.

FIRB may share applications with other government departments and agencies for consultation purposes, but will not provide them to third parties outside of the government unless it has permission from the applicant or it is ordered to do so by a court of competent jurisdiction.

**Penalties**

The amended FATA also strengthened the offence and penalties provisions by creating a number of new civil penalty provisions and increasing the existing criminal and civil penalties for non-compliance.

Offences include failing to notify the Treasurer before taking a notifiable action, giving notice to the Treasurer about a significant or notifiable action and taking the action before the end of the applicable time limit available to the Treasurer to object or contravening an order made by the Treasurer. The maximum penalties for an individual include a fine of A$135,000 or three years’ imprisonment or a fine of A$675,000 for companies.

The criminal and civil penalties extend to third parties including company officers, lawyers, accountants and real estate agents if they knowingly assist a foreign investor to breach the FATA.

The Treasurer also has broad powers to make disposal or other orders in relation to a breach.
3

Forms of business organisation
3. **Forms of Business Organisation**

**Introduction**

When formulating an investment proposal, foreign investors need to determine which form of business organisation is the most appropriate for their requirements. The major types of investment vehicles used in Australia by both residents and non-residents are:

- companies, including branch offices of foreign companies;
- joint ventures;
- partnerships; and
- trading trusts.

Specific advice as to the appropriate vehicle should be sought on a case-by-case basis.

**Companies**

An overseas company wishing to carry on business in Australia may elect either to register a subsidiary or establish a branch office by registering itself as a foreign company. Registration of a subsidiary or branch under the *Corporations Act 2001* (Cth) automatically confers the right to carry on business throughout Australia.

**Choice of branch or subsidiary**

The main factors to consider when deciding whether to establish a branch or subsidiary are:

- a subsidiary is a separate entity from its parent corporation. It has limited liability and the parent is not normally liable for the debts or obligations of a subsidiary. A parent company can be held liable for the debts of its subsidiary where:
  - that subsidiary was insolvent or becomes insolvent at the time of incurring a debt;
  - there were reasonable grounds for suspecting that insolvency; and
  - the parent corporation, or one or more of its directors, suspected insolvency or should reasonably have suspected insolvency.
an Australian branch of an overseas corporation is not a separate legal entity and the corporation will therefore be liable for all debts and obligations of the Australian branch;

from a taxation viewpoint, if a subsidiary is chosen, some establishment expenses will not be deductible at all from the company’s assessable income and other establishment expenses will not be of use until the subsidiary is earning sufficient assessable income. Different registration and filing requirements for the goods and services tax (GST) apply to subsidiaries and branches;

the annual return of a branch office (which is available to the public) must include the worldwide financial accounts of the company of which it is a branch, unless exempted by the Australian Securities and Investments Commission (ASIC). Disclosure is not limited to the local branch operations;

the use of a branch may lead to practical difficulties in dealing with Australian government organisations, financiers or other third parties. For example, in arranging Australian finance, institutions will normally require audited financial statements relating to the Australian operations of the applicant which may not be readily available in an acceptable form in the case of a branch; and

third parties dealing with a branch may need to be satisfied as to the nature of the foreign corporation’s legal structure and the means by which it is able to bind itself to obligations in Australia.

Public company or proprietary company

Several types of companies are available. The two most common company types are:

- public companies; and
- proprietary (or private) companies, which are further divided into large and small proprietary companies.

The major differences between public and proprietary companies are as follows:

- A proprietary company cannot have more than 50 non-employee shareholders whereas a public company may have an unlimited number of shareholders.
- A proprietary company must be either limited by shares or be an unlimited company that has share capital. A public company may be limited by shares, limited by guarantee (e.g. charities) unlimited or a no liability company (only for mining companies).
A proprietary company cannot engage in any activity that would require the lodgement of a prospectus, such as offering shares to retail investors. A proprietary company must have at least one director who must also be ordinarily resident in Australia, whilst a public company must have at least three directors, at least two of whom must be ordinarily resident in Australia. There are no specific qualifications to be satisfied to enable non-residents to act as directors of Australian companies, provided they are at least 18 years of age and have otherwise consented to act as directors.

Proprietary companies are not usually required to lodge all their constituent documents with ASIC, while public companies are required to do so.

Proprietary companies are not required to have a secretary, but if one or more secretaries are appointed, one must be resident in Australia, whereas public companies must have a company secretary who resides in Australia.

In all cases, both directors and secretaries must be individuals, not companies.

A proprietary company will usually be more appropriate if the entity is to be a wholly-owned subsidiary of a foreign company and if a public offering of shares or debentures is not intended. A proprietary company may be converted into a public company at any time.

A small proprietary company is defined as a company which has, on a consolidated basis (judged at financial year end), at least two of the following features:

- Gross operating revenue of less than A$25 million;
- Gross assets of less than A$12.5 million; and
- Fewer than 50 employees.

If the proprietary company does not meet at least two of these requirements, it is a large proprietary company.

For a description of the registration requirements for companies and other regulations concerning the operations of companies in Australia, see Chapter 4 “Companies and Securities Regulation”.

**Joint ventures**

A foreign investor may wish to enter into a joint venture arrangement with one or more other parties with respect to the conduct of an Australian enterprise. Such arrangements may be either unincorporated or incorporated. There is no legislation directly regulating joint venture arrangements of either type.
Unincorporated joint ventures

Under an unincorporated joint venture, the respective rights and obligations of the participants are essentially determined by contract. The rights and duties of the participants are usually set out in detailed joint venture documents and may be interpreted and supplemented by reference to general contract law. A joint venture of this type is most suitable for specific projects or business ventures.

Careful structuring is required to ensure that the joint venture is not treated as a partnership for partnership law and tax purposes. This may carry with it certain taxation advantages and generally involves the joint venture agreement providing for the sharing of the product of the joint venture rather than any sharing of profits.

Incorporated joint venture

A joint venture will often be conducted by a corporate entity owned by the joint venture participants. In this case, the participants normally enter into shareholder agreements while Australian company laws will apply to many aspects of their relationship.

Partnerships

General

A partnership under Australian law is an association of persons who carry on business in common with a view to profit. Business partnerships of more than 20 persons are prohibited, except for certain professional partnerships.

A partnership is formed by agreement between the parties and the rights and obligations of the partners are usually set out in a written partnership agreement. Partnership Acts in each State apply to regulate certain rights and obligations of partners. Subject to the terms of the partnership agreement, each partner is entitled to participate in the management of the partnership.

In general, the liability of partners for the debts of the partnership is unlimited, so that each partner is fully liable and may be sued personally. However, certain States of Australia now permit the formation of limited partnerships.
Limited partnerships
Limited partnerships comprise two classes of partners:

− “limited partners” whose liability is limited to a pre-contributed sum; and
− “general partners” whose liability is unlimited and who generally undertake a managerial role.

Each limited partnership must be registered with the relevant State authority.

There are certain jurisdictional problems which cast doubt on the ability of the States to effectively limit liability under these arrangements. Most of the States have made reciprocal arrangements to overcome these problems.

Limited partnerships are not generally used as they are generally taxed as companies in Australia.

Trading trusts
A trading trust is a trust arrangement under which a trustee (usually a limited liability company) conducts a business or holds an investment on behalf of certain beneficiaries. To establish the trust, a nominal amount is normally settled by a party (the settlor) to be held by the trustee on behalf of and in trust for the beneficiaries. Once the trust is created, the trustee acquires the business or investment and holds it on trust for the beneficiaries in accordance with the terms of the trust instrument.

The duties owed by the trustee to the beneficiaries are regulated by the trust deed, State legislation and the general law. Trusts fall broadly into two categories:

− Discretionary trusts
− Unit trusts.

Discretionary trusts
Under this form of trust, the trustee has a discretion over the distribution of the income and capital of the trust to any of the beneficiaries identified in the trust deed. Discretionary trusts have historically been employed for family tax planning purposes as a means of splitting income among various family members. Discretionary trusts are usually inappropriate as investment vehicles.
**Unit trusts**

Unit trusts are trusts in which investors subscribe for units issued by the trustee. Each unit confers upon the holder a proportionate interest in the overall assets and undertaking of the trust. Unit trusts have been used as vehicles for public investment schemes.

**Sole trader**

Any person may carry on business as an individual using either their own name or a registered business name. A sole trader is personally liable for all debts incurred by them in carrying on that business.

**Comparative business advantages**

The choice of an appropriate structure will depend upon the facts of any particular case. As a general indication, some advantages usually associated with the different structures are set out below.

**Companies (and incorporated joint ventures)**

The major advantages in adopting a corporate structure include:

- the liability of shareholders is usually limited to the amount of their capital contribution in the company;
- the corporate structure facilitates the coordination of the interests of a large number of investors under a well-defined legal framework in situations where other business forms may be unworkable;
- public companies are able to raise finance from the general public through offers to subscribe for securities;
- profits may be accumulated and re-invested by the company without the need for distribution to shareholders; and
- the differential between the corporate tax rate of 30% and the top effective personal tax rate of 47% may give rise to tax-planning opportunities in certain circumstances.
Partnerships

The major advantages of partnerships include:

- the partnership structure is often more flexible than other structures;
- partnerships are under no obligation to make public disclosures of reports and accounts;
- in contrast to the use of companies and trusts, a partnership enables the participants to offset losses and expenditure incurred in relation to unrelated activities against the income of the partnership for tax purposes. However, these benefits will not extend to limited partnerships; and
- where professionals conduct business jointly with other members of the same profession, legal or ethical restrictions may exist which limit the conduct of the business as a company and the partnership structure may be appropriate.

In those States in which it is permitted, the limited partnership also offers the benefit of limited liability for some of the partners.

Trusts

Advantages of trusts include:

- trusts may be more effective for tax purposes where assets are to be held for ultimate sale;
- a trust may be structured so that the liability of the unitholders or beneficiaries of the trust is limited;
- trusts facilitate certain public investment schemes, where an independent trustee (called a “responsible entity”) is required to protect the interests of the investing public; and
- the trust structure is often more flexible than the company structure. For example, the legal restrictions which apply to reductions in the capital of a company do not apply to similar reductions in the capital of a trust.
Companies and securities regulation
4. Companies and securities regulation

The national scheme

All corporations in Australia are required to comply with provisions of the Corporations Act 2001 (Cth) (Corporations Act). The legislation is administered by a single national regulatory authority called the Australian Securities & Investments Commission (ASIC).

ASIC regulates the registration of companies and the registration of foreign companies or branches in Australia. ASIC also maintains a publicly available database on each registered entity and regulates and oversees all aspects of corporate and securities law activity and transactions, including the release of regulatory guides for use by corporations and their advisers.

Registration requirements

Incorporation

A person may choose to incorporate a company themselves or purchase all of the shares in a clean shelf company (a company that has not traded) from a solicitor, accountant or specialist company formation service.

A company (whether a proprietary company or a public company) is registered by ASIC as an Australian company in the following manner:

– If a particular company name is requested it may be reserved with ASIC by lodging an application and paying the prescribed fee (otherwise the registration number will be the company’s name);

– Written consent must be obtained from each person who will become a director, secretary and public officer of the company and from the person who will become a shareholder of the company (for example the parent entity). A proprietary company must have at least one director, but need not have a secretary, and at least one director and secretary (if any), must ordinarily reside in Australia;

– An application for registration must be lodged with ASIC accompanied by certain prescribed documents and the necessary filing fees;

– A certificate of registration is issued, entitling the company to carry on business in every State and Territory of Australia.

The company’s name can be changed, subject to availability, by special resolution of the shareholders and the issue of a certificate of registration of change of name by ASIC.
Constitution

A company’s internal management will be contained in:

- the replaceable rules which are set out in the Corporations Act;
- its own constitution; or
- a combination of replaceable rules and the constitution.

The replaceable rules are optional provisions contained in the Corporations Act which relate to the internal management of a company, however they do not deal with every aspect of corporate governance. In general, companies (proprietary and public) choose to adopt their own constitution instead of relying on the replaceable rules. A company will adopt a constitution either:

- on registration, if each person specified in the registration application as a person who consents to become a member agrees in writing to the terms of a constitution before the application is lodged; or
- after registration, if the company passes a special resolution adopting a constitution.

If a company does not choose to adopt its own constitution, it will be taken to automatically adopt the replaceable rules.

Companies may choose to have a common seal for executing documents but this is not mandatory and is not often done in practice. To execute a document without a common seal, the document may be signed by either two directors or a director and a secretary or, in the case of a sole director/secretary proprietary company, by that director/secretary.

Foreign companies

A foreign company is an incorporated or unincorporated body that is formed in an external territory of Australia or outside Australia, and which can sue and be sued or may hold property in the name of its secretary or other officer. Corporations sole, exempt public authorities, and unincorporated bodies that have their head office or principal place of business in Australia are excluded from the definition of a foreign company.

If a foreign company elects to carry on business in Australia (for example through a branch office in Australia), the company must be registered with ASIC as a foreign company. Whether a body is “carrying on business” in Australia will depend
on a number of factors. Generally, carrying on business involves some kind of systematic and regular commercial activity. A company does not carry on business in Australia merely because, for example, it has a bank account, is involved in a proceeding or dispute, or invests funds or holds property in Australia.

To register as a foreign company, the company must:

− lodge the relevant application form with ASIC, accompanied by certified copies of its constituent documents including an equivalent certificate of registration and its constitution;
− provide details of its registered office in Australia;
− lodge a memorandum of appointment of a local agent (who must be a resident) to carry out limited functions such as accepting service of process and certain notices; and
− pay the relevant fees to ASIC.

A foreign company is not required to have resident directors or secretaries in order for it to operate a branch office in Australia.

Rather than carry on business in Australia itself, a foreign corporation may instead use an Australian incorporated subsidiary which may be a proprietary or a public company.

**Representative office**

If a foreign corporation does not wish to register as carrying on business in Australia, it may be possible to establish a representative office to engage only in activities which do not amount to, or form part of, the carrying on of the relevant business in Australia. For example, having a nominated person employed by a local affiliate to handle enquiries.

**Publication requirements**

Both Australian companies and registered foreign companies are required to display their name and Australian Company Number or Australian Registered Body Number on all public documents and negotiable instruments. Under the Corporations Act “public documents” are broadly defined and include business letters, statements of account, invoices, receipts, orders and official notices or publications of the company. Registered foreign companies are also required to specify their place of origin on these documents and instruments.
Compliance and reporting requirements

Registered office
Every company must have a registered office in Australia from the date of registration. The company’s name must be prominently displayed at the premises of its registered office. The registered office of every public company must be open to the public for at least three hours between 9 am and 5 pm on each business day. A proprietary company may keep its registered office closed, but it must provide access to its registers upon request.

Preparation of accounts
All public companies, registered managed investment schemes (MIS) and large proprietary companies are required to prepare, and lodge with ASIC, an annual financial report that complies with the accounting standards and gives a true and fair view of the company’s financial position for that period, as well as an annual director’s report. In some cases, a company may seek relief from ASIC in respect of this requirement.

The annual financial report consists of financial statements for the year, notes to these financial statements, and directors’ declarations about the financial statements, including a declaration as to whether the company will be able to pay its debts as and when they become due and payable. A disclosing entity (for example a public company) or registered MIS must lodge its financial reports within three months of the end of the financial year. All other reporting companies must lodge their financial reports within four months of the end of the financial year and half yearly accounts within 75 days of the end of the financial year.

A small proprietary company is required to maintain proper accounting records but it will only have to prepare an annual financial report and directors’ report and lodge them with ASIC if it is:

− required to do so by ASIC, or if it is required to do so by members who hold at least 5% of the votes; or
− controlled by a foreign company which has not lodged audited consolidated accounts with ASIC.

A small proprietary company is defined as a company which satisfies at least two of the following three conditions:
1. The consolidated revenue of the company and its controlled entities for the financial year is less than A$25 million;

2. The total value of its consolidated gross assets at the end of the financial year is less than A$12.5 million;

3. It has fewer than 50 employees at the end of the financial year.

Registered foreign companies are required to lodge financial statements with ASIC at least once every calendar year and at intervals of not more than 15 months. Financial statements comprise a copy of the company’s balance sheet, profit and loss statement and cash flow statement (all made up to the end of the last financial year) and any other documents the company is required to prepare by the law that applies in the company’s place of origin, together with an ASIC document to verify those financial statements.

A foreign-controlled small proprietary company may apply to ASIC for relief from lodging an annual report and directors’ report.

**Auditors**

Every public company and large proprietary company must appoint an auditor. A public company must do this within one month after registration. If a small proprietary company is required to prepare audited financial statements, it will need to appoint an auditor. This requirement also applies where the company is controlled by a foreign company which has not lodged audited consolidated accounts with ASIC or otherwise qualified for relief.

**Annual general meeting**

Unless its constitution provides otherwise, a proprietary company is not required to hold an annual general meeting of its shareholders (AGM). A public company must hold an AGM within 18 months after registration and must hold an AGM at least once every calendar year within five months of the end of its financial year. The auditor of a public company must attend AGMs.

All general meetings, including the AGM, require at least 21 days’ notice and, in the case of a public company listed on the Australian Securities Exchange (ASX), at least 28 days’ notice.

All resolutions of a proprietary company may be passed by a written circulating resolution signed by all of the members.
Annual statement filing

Every company has an annual review date which is usually the anniversary of its registration date. Companies can apply to ASIC to alter their review date. Each year, soon after its annual review date, ASIC issues a company with an annual statement and an invoice for the company’s annual review fee. An annual statement contains information about the company such as details of its registered office, its shareholders, officeholders and the share structure. The annual statement is available for inspection by the public.

The obligation to respond to the annual review documents is a separate obligation from the financial report obligations discussed above.

Continuous disclosure by disclosing entities

Disclosing entities (typically only listed public companies or trusts) must also disclose, on a continuous basis, information that a reasonable person would expect to have a material effect on the price or value of the entity’s securities. There are limited carve-outs available (for example for information that is incomplete and remains confidential or is a trade secret). Most listed entities adopt rigorous monitoring and reporting systems to enable price-sensitive information to be identified and disclosed to the market in a timely fashion.

Civil penalties apply for non-compliance with the continuous disclosure requirements. ASIC has the power to fine entities which do not comply with the requirements. Directors may be criminally liable if the failure to disclose is intentional or reckless. If the failure to disclose is negligent, the entity and any of its directors knowingly involved in the contravention may incur civil liability to any person suffering loss as a result.

The continuous disclosure requirements applicable to Australian disclosing entities are not applicable to branch offices of a foreign company (unless the foreign company is listed on the ASX). A foreign company’s branch must also make certain, but more limited, continuing disclosures.

Ongoing filing requirements

A company’s minute book and registers must be kept at its registered office or its principal place of business within Australia. The company register might also be kept at the place where the register is maintained, for example the company’s solicitor’s office, or elsewhere if permission has been granted by ASIC. Members are entitled to inspect the minute books free of charge.
In addition to the minutes of directors and shareholders’ meetings, a company must maintain registers of members, option holders and debenture holders. Any changes to the company’s name, officers, registered office and other matters concerning the business of the company must be notified to ASIC using the appropriate form within a certain prescribed period after those changes occur (otherwise late fees and penalties apply) and the company’s registers must be updated to reflect these changes.

A company must also maintain accurate records on the personal property securities register of the creation or discharge of any registrable security interests in respect of its personal property under the *Personal Property and Securities Act 2009* (Cth) (PPSA). Generally the PPSA will apply to personal property which is located in Australia or the grantor of the security interest is Australian. The PPSA is a priority based regime meaning that a failure to register promptly may result in the company losing its priority in respect of the security interest (and potentially its title in the underlying personal property) or the security interest becoming unenforceable in the insolvency or bankruptcy of the grantor (see Chapter 7 “Banking and Finance” for more information on the PPSA).

Proprietary companies are not required to file their constitution on the public record at the time of registration or when resolutions embodying changes to the constitution are made, unless the resolutions are related to the name, share capital or status of the proprietary company.

**Company directors: duties and liabilities**

**Directors’ duties**

Under the Corporations Act, the directors must exercise their powers and duties by:

− using the care, diligence and skill which a reasonable director, having the same knowledge and skills as the director, would reasonably do in the circumstances;
− acting in good faith in the best interests of the company (by acting for the benefit of the company as a whole) and for a proper purpose;
− not acting improperly either to gain an advantage for themselves or someone else or cause detriment to the company;
− not improperly using information obtained from their position as a director either to gain an advantage for themselves or someone else; and
− preventing the company from trading while it is unable to pay its debts.
The duty of care, diligence and skill requires the directors to acquaint themselves with, and take responsibility for, the running of the company. A director is expected to be capable of understanding the company's affairs to the extent of actually reaching a reasonably informed opinion of its financial capacity. A director must, in the performance of his or her duties, exercise a degree of skill that may reasonably be expected from a person of like knowledge and experience. The duty to exercise care, skill and diligence applies in relation to executive directors and non-executive directors. A director may not be able to argue a lack of formal training or knowledge of financial statements to avoid his or her duties, nor can directors rely unquestioningly on management to satisfy their duties.

The standard of care required of a director must be assessed by reference to the particular circumstances of the director concerned, including any special skills for which the director was appointed. A breach of the duty of care and diligence will only give rise to civil sanctions (e.g. the director being disqualified from office or being forced to pay compensation) and will not provide a basis for a criminal offence.

**Business judgement rule**

The Corporations Act contains a statutory business judgement rule which deems a director to have met the requirements of the statutory duty of care and diligence, and the equivalent duties at common law and in equity, in respect of a business judgement if the director:

- made the judgement in good faith for a proper purpose;
- did not have a material personal interest in the subject matter of the judgement;
- informed themselves about the subject matter of the judgement to the extent they reasonably believed to be appropriate; and
- rationally believed that the judgement was in the best interests of the company.

The business judgement rule further provides that the director’s belief that the judgement is in the best interests of the company is rational unless the belief is one that no reasonable person in their position would hold.

**Conflict of interest**

Directors must avoid any actual or potential conflicts between personal interests and their duties to the company. Generally, directors have a duty to notify the Board of any “material personal interest” in a matter in which conflict arises, subject to exceptions in the Corporations Act that may apply to certain kinds of
interests of a director of a proprietary company. Even if the director does not profit from a particular transaction in which they have an interest, the director may be in breach of this duty. In addition, there are specific restrictions on voting and attendance at directors’ meetings for directors of public companies where a material personal interest exists in the matter under consideration, even where this interest has been appropriately disclosed.

A conflict may also arise where the director has a personal interest in a contract made by the company or when a director is a director of two or more companies which are parties to a contract.

A director may not take advantage of a commercial opportunity that may have been available to the company unless full disclosure to, and consent from, the members is obtained.

**Financial benefit**

A public company must not give any “financial benefit” to a related party, which broadly includes anything that confers a financial advantage, such as the making of a payment, entering into an agreement or giving an indirect financial benefit. A “related party” includes a director of the company, a close relative of the director, a parent company, or a company controlled by any of those people.

A public company may, however, give a financial benefit to a related party where it has obtained shareholder approval and the benefit is conferred within 15 months of approval being given. There are also certain benefits which are exempted from the prohibition and do not require shareholder approval, including arm’s length transactions on commercial terms, and the payment of “reasonable remuneration” to an officer. In practice, these exemptions are commonly relied upon by public companies.

**Statutory derivative action**

The Corporations Act contains a statutory derivative action which enables shareholders, directors or officers of a company to bring an action on behalf of the company for a breach of duty by a director, officer or third party where the company is unwilling or unable to bring the action itself. The individual seeking to bring the action on behalf of the company is required to satisfy the Court of certain criteria in order to be granted leave. The rationale behind this ability is to encourage company management to be more accountable to the shareholders for decisions they make.
Directors’ insurance and indemnities

A company will often agree to indemnify directors, to the extent permitted by law, against certain liabilities and legal costs incurred by the directors as officers of the company and will maintain and pay the premium on a director’s or officer’s insurance policy in respect of the directors.

The Corporations Act prohibits a company or a related body corporate from exempting a person, whether directly or through an interposed entity, from a liability to the company incurred as an officer or auditor of the company. A company or its related companies is prohibited from indemnifying a director or other officer of a company (not including legal costs) where:

- the liability is owed by the officer to the company itself or a related body corporate;
- a civil penalty or compensation order is imposed on the officer under the Corporations Act; or
- the liability is owed by the officer to someone other than the company and it did not arise out of conduct in good faith.

Indemnities given by the company to an officer of the company for legal costs are permitted, except where:

- the officer is defending proceedings in which the officer is liable on one of the above three grounds;
- the officer is found guilty in a criminal proceeding;
- ASIC has established a successful action against the officer; or
- the Court has denied relief sought by the officer.

The company may loan or advance the officer money to cover the legal proceedings, but that money must be repaid if the director loses the proceedings. The advance may be retained as an indemnity if the officer wins the proceedings.

The company is prohibited from taking out insurance or paying premiums, either directly or indirectly through an interposed entity, to insure against liability incurred by an officer of the company which involves:

- a wilful breach of duty in relation to the company;
- improper use of information; or
- improper use of his or her position to gain an advantage at the expense of the company.
A company may take out insurance and pay the premiums to protect its directors and officers from other risks, including costs and expenses in defending civil and criminal proceedings, whatever the outcome.

**Insolvent trading**

The duty to prevent insolvent trading is one of the most important duties imposed on company directors. It allows for enforcement by creditors and it allows for the personal assets of directors to be used for the repayment of a company’s debts. Under the Corporations Act, directors have a positive duty to prevent their company from trading while insolvent and civil liability (and in some cases criminal liability) may attach to the directors as a result of a breach of this requirement.

In determining a breach, the timing of the incurrence of a debt and the reasonable knowledge of the director at the relevant time will be relevant. The circumstances in which a debt may be incurred include, for example, the issue of redeemable preference shares, entry into a buy-back agreement or the payment of a dividend. If the company is insolvent when a debt is incurred or becomes insolvent by incurring the debt, then the directors risk personal liability for the debt.

The provisions apply to debts incurred where there are reasonable grounds to suspect that the company will not be able to pay its debts as and when they become due and payable. In determining this issue, consideration is given to both what the director actually knew and what the director ought reasonably to have known. There are various statutory defences under the Corporations Act which the directors may rely on provided that they can prove certain elements. For example, that they had reasonable grounds to expect that the company was solvent, that they had taken reasonable steps to prevent the company from incurring the debt or that they were relying on a competent person to provide them with information as to the affairs of the company.

**Other liabilities**

The Corporations Act may also impose personal liability on directors in certain specific circumstances where provisions of the Act are breached. This may include a failure to comply with the requirements as to company and business names, insider trading in a company’s securities, inaccuracies or omissions in the contents of any company prospectus, breach of the prohibition on financial assistance for share acquisitions, and breach of provisions relating to the preparation of accounts.
Directors may be personally liable for breaches by the company of other legislation, including laws relating to occupational health and safety, competition and consumers, environmental protection, equal opportunity, discrimination and taxation.

Directors may also be made personally liable for certain State and Commonwealth taxes that are not paid by the company or for payments of tax that are clawed back by a liquidator of a company.

**Offerings of securities**

The Corporations Act regulates capital raising activities of both local and foreign corporations in Australia. Generally, a company is prohibited from offering securities (including shares, options and debentures) in Australia unless it first lodges a disclosure document (such as a prospectus) with ASIC that complies with certain content and procedure-related statutory requirements.

Offers which are exempt from the disclosure document requirement include:

- personal offers where no more than 20 people invest during any 12 month period for amounts up to A$2 million in aggregate;
- offers where the minimum subscription is A$500,000 by each person to whom the offer is made;
- offers made to “sophisticated investors”, who are defined as persons who meet a wealth test (i.e. those investors who have net assets of more than A$2.5 million or gross income exceeding A$250,000 per annum) or persons who a licensed security dealer considers to be “sophisticated” based on previous investment experience;
- offers made to “professional investors”, for example, financial services licensees, listed entities and persons who have more than A$10 million in assets under management; and
- certain offers to present security holders, including employee share schemes.

The most common form of disclosure document is a prospectus. However, a company may offer securities using an Offer Information Statement (OIS) if the amount of money to be raised, when added to all amounts previously raised, is A$10 million or less. A company may also offer securities using a Profile Statement in connection with ASIC approved offers where a prospectus has been lodged.
The onus lies on the issuer to ensure that the disclosure document complies with the disclosure requirements set out in the Corporations Act. A prospectus must contain all the information investors and their professional advisers would reasonably require and reasonably expect to find in the prospectus for the purpose of making an informed investment decision. If the issuer becomes aware that the prospectus contains misleading or deceptive information, or if there is an omission or change in circumstances that is materially adverse from the point of view of an investor, a supplementary or replacement document must be lodged with ASIC.

The company, directors, and expert advisers may benefit from a uniform "due diligence" defence for misleading or deceptive statements in a prospectus if they can prove they made reasonable inquiries and they believed on reasonable grounds that the prospectus did not contain any misleading or deceptive statements and that there was no omission. Professional advisers (such as independent accountants) will only be liable for statements in a prospectus that have been attributed to them with their consent.

A special disclosure regime exists for offers of interests in a managed investment scheme (such as units in a unit trust).

ASIC has issued certain exemptions providing relief from procedural requirements for prospectuses lodged and distributed both in Australia and in another country where the issuer has securities quoted on a foreign stock exchange. However, the disclosure requirements of the Corporations Act are still required to be met by the company offering the securities.

Prospectuses may be issued in hard copy or electronically, for example, by making the document available on the internet. An issuer of securities must take all reasonable measures to ensure that a person to whom an electronic application form is issued is given access, at the same time and by the same means, to the relevant disclosure document. The issuer must also ensure safeguards are in place such that the offer is made only in Australia, or to those other jurisdictions intended to be covered by the issuer.

**ASX listings of securities of foreign companies**

The ASX has detailed listing rules which set out the pre-conditions to listing a company on the ASX and official quotation of the securities, and which prescribe requirements to be satisfied by listed companies on an ongoing basis.
Foreign corporations may apply for listing on the ASX in one of two ways. First, if the foreign corporation is listed on another stock exchange and complies with the listing rules of its overseas home exchange, it may qualify as an “exempt foreign company” under the ASX listing rules. An ASX foreign exempt listing requires, among other things, an entity to have at least A$200 million in operating profit for each of the preceding three years or to have net tangible assets of at least A$2 billion. The thresholds have recently been reduced to an aggregated profit of A$1 million for the past three financial years or net tangible assets of at least A$3 million (or a market capitalisation at the time of admission of A$10 million) for NZX-listed entities only.

A foreign exempt listing means that the entity is not subject to most of the ASX listing rules, but it must continue to comply with the listing rules of its overseas home exchange, maintain an informed market (which would be satisfied by sending ASX copies of all documents lodged by the foreign company to its home stock exchange) and allow for electronic share registration and transfer records in Australia.

A foreign company which does not meet the above thresholds may also seek admission to ASX under the “standard” ASX listing route, which applies the same criteria to an Australian entity. One significant requirement for an ASX listing is that the entity issues a disclosure document (typically a prospectus) which must be lodged with ASIC and provided to ASX. A foreign entity seeking an admission under the ASX listing process will then be subject to all of the ASX listing rules.

**Trading in securities and takeovers**

The Corporations Act also regulates:

- trading in securities and the conduct of participants in the securities industry; and

- the acquisition of shares in listed and certain unlisted companies. Generally, a person is prohibited from acquiring more than 20% of the voting shares of a listed Australian company, or more than 20% of the voting interests of a listed trust. Exceptions to the prohibitions include takeover offers to all shareholders where the offer documents are lodged with ASIC and acquisitions which are first approved by shareholders - see Chapter 5 for more detail.
Employee share and options plan

The Corporations Act and ASX listing rules impose various approval requirements on the adoption of employee share or option plans by public companies. Employee plans usually take the form of either an employee share purchase plan, which provides employees with means for acquiring existing or new shares, or an employee share option plan which provides employees with options to acquire shares in the future.

Once the employee share or option plan is established, it usually will be implemented by an offer of securities to employees or executives. Any such offering will need to comply with the fundraising provisions of the Corporations Act unless an exception is applicable. ASIC has also released various Class Orders which give relief from the fundraising provisions if certain requirements are followed.

Return of capital

The Corporations Act sets out a relatively simple procedure to enable a company to reduce its share capital (such as returning capital to shareholders) or offer to buy-back its own shares. In general, a company may reduce its share capital provided the reduction in capital is fair and reasonable to the company’s shareholders as a whole, it does not materially prejudice the company’s ability to pay its creditors and it is approved by shareholders.

An equal reduction of share capital (where the company reduces the shares held by all shareholders in equal proportions) requires an ordinary resolution of the company’s shareholders.

For a selective reduction in capital (where the company repays capital or reduces some of the shares held by selected shareholders), special shareholder approval is required, either by:

- a special resolution passed at a general meeting of the company, where any person who is to receive consideration as part of the reduction or whose liability to pay amounts unpaid on shares is to be reduced, or any of their associates, are unable to vote in favour of the resolution; or

- a resolution which is agreed to at a general meeting by all ordinary shareholders.

If the reduction involves the cancellation of shares, the reduction must also be approved by a special resolution passed at a meeting of the shareholders whose shares are to be cancelled.
Buy-Backs

A proprietary or public company may buy back its own shares if the buyback does not materially prejudice the company’s ability to pay its creditors and the company complies with the procedural requirements set out in the Corporations Act. Except in the case of selective buybacks, shareholder approval will be required if the buyback will result in more than 10% of the company’s issued shares being acquired in a 12 month period.

A selective buyback requires the unanimous approval of all shareholders or a special resolution of shareholders must be passed at which no vote is cast by the selling shareholders or their associates.

Certain information must be provided to shareholders and to ASIC before some buybacks can be implemented to ensure that shareholders receive all material information known to the company at the time of the buyback. Directors must ensure that the buyback does not result in the company becoming insolvent to ensure that they do not breach the insolvent trading provisions in the Corporations Act.

Corporate insolvency

General

The Corporations Act provides a uniform set of laws governing the various forms of insolvency administration for companies in Australia; although there are procedural differences observed in the various State Supreme Courts and in the Federal Court of Australia, all of which have jurisdiction in this area.

Voluntary administration

The voluntary administration procedure is a short-term insolvency administration designed to maximise the chances of the company (or as much as possible of its business) continuing in existence or, if it is not possible for the company or its business to continue in existence, achieve a better return for the company’s creditors than would be the case if the company were to be wound up.

A voluntary administration is usually commenced by the directors of a company resolving that, in their opinion, the company is or is likely to become insolvent and that an administrator should be appointed. A secured creditor or a liquidator of the company may also appoint an administrator.

The appointment of an administrator to a company operates to stay all proceedings against the company and restrictions are imposed upon the rights of owners, lessors
and secured creditors to seize and reclaim their property or security (subject to a number of limited exceptions set out in the Corporations Act).

The administrator must inform the company’s creditors of the appointment and call meetings of creditors within strict time limits (the first meeting must be held eight business days after the administrator’s appointment). The administrator must also convene a meeting of creditors at which the creditors may resolve to bring the administration to an end and return the company to the control of its directors (but only if it is solvent), put the company into liquidation or have the company enter into a deed of company arrangement (if one has been proposed).

**Deed of company arrangement**

Where a company executes a deed of company arrangement (DOCA), a person (usually the administrator) is appointed to administer the deed with all the powers set out in the deed and under the Corporations Act.

A DOCA itself has very few formal requirements and will be tailored to suit the particular circumstances of the company. For example, it may allow the company to continue to trade on, including under the control of its directors, and it will often provide for a fund to be established for distribution to creditors in satisfaction of the creditor’s claims against the company, and for the release of creditors’ claims against the company. Importantly, a DOCA will bind all creditors of a company (secured and unsecured).

The administration of the company will come to an end when the DOCA is terminated. If the deed is terminated because its objectives have been met, the company can continue to trade and control will revert to the company’s directors and officers. However, if the DOCA is terminated for other reasons and the objectives of the deed of arrangement have not been met, then it is likely that the company will transition to liquidation.

A DOCA is an alternative to a scheme of arrangement to effect a reorganisation of a company’s affairs. There are reasons for and against using a scheme of arrangement or a deed of arrangement (chief among which are time, cost and complexity), depending on the individual circumstances of the company.

**Liquidation**

Liquidation may be effected on a voluntary basis where a company’s members or creditors resolve to wind up the company. In these circumstances, control of the winding-up process and appointment of a liquidator will generally be in the hands of
the members if the company is solvent, or creditors if it is insolvent. Alternatively, compulsory liquidation occurs where a creditor or other applicant applies to a court for an order that the company be wound up and a liquidator appointed.

There is also an interim procedure, known as a provisional liquidation, where a provisional liquidator is appointed as an urgent measure to maintain the status quo in a company.

In both compulsory and voluntary liquidations there is an automatic stay of all proceedings and enforcement against the company and its property once the winding up order is made (except in limited circumstances). The liquidator’s primary role and duty is to preserve, collect and sell the assets of the company and distribute the available proceeds in the order provided for by the Corporations Act.

In terms of the impact of winding up on contracts, a winding up may give a counterparty a contractual right to terminate the contract (under an *ipso facto* clause) as liquidation, as a terminal insolvency regime is considered to effect a repudiation of the company’s contractual obligations. A liquidator also has the power to disclaim onerous property of the company, such as land burdened with onerous covenants or unsaleable property including unprofitable contracts.

The liquidator has the role of investigating the company and is entitled to possession of its books and records and to question its directors to ascertain the reasons for the company’s failure. A liquidator must also investigate the company’s pre-liquidation transactions, which may uncover transactions that are voidable under the Corporations Act. Setting aside such transactions increases the pool of assets available for distribution to the company’s creditors. A liquidator may also consider actions against directors and officers of the company for insolvent trading or breaches of directors’ duties.

Once a distribution of funds (if any) to creditors is complete, the liquidation will be finalised and the company deregistered.

In a winding up, all unsecured creditors with debts or claims (including contingent, unliquidated and future claims) against the company are entitled to participate for dividends from the available assets in respect of their debt or claim if the circumstances giving rise to their debt or claim arose before the “relevant date” for the liquidation. The relevant date is usually the date on which the winding up order was made, or the date of the appointment of the administrator if the winding up was preceded by a voluntary administration. Insolvency set off may be available where a creditor has a claim against and a liability to the company. Specified
debts and claims will take priority over the claims of unsecured creditors, being in general terms:

− expenses incurred by an administrator or liquidator in preserving and relating the property of the company;
− the costs and expenses of obtaining any order for liquidation; and
− priority employee entitlements.

All other unsecured debts rank equally according to the *pari passu* principle and if the property of the company is insufficient to meet them in full, they must be paid proportionately.

Certain registrable security interests that are not perfected by the company may be void upon liquidation of the company. Please refer to Chapter 7 "Banking and Finance" for a detailed discussion of the perfection of security interests under the PPSA.

**Receiverships**

A receivership is a form of external administration that can be commenced by either a secured creditor or, in limited circumstances, by a court order. The most common form of receivership involves a secured creditor exercising its powers under a security interest held over some or all of a company’s assets and appointing a receiver over those assets.

A receivership may occur concurrently with a liquidation or administration.

The receiver will usually (although not always) act as the agent for the company and will have extensive powers, as prescribed in the security document and under the Corporations Act, to arrange for the orderly sale of the secured assets for the benefit of the secured creditor. In realising that property, as a general proposition, receivers are under a duty when selling or exercising a power of sale of secured property to take all reasonable care to:

− obtain not less than market value for the property if, when it is sold, it has a market value; or
− obtain the best price reasonably obtainable, if it does not have market value.

The powers of directors of the debtor company are limited by the appointment of a receiver; however, the directors will retain their powers to deal with assets of the company other than the secured assets.
A receivership does not operate to stay proceedings against the company, and the company may still be placed in liquidation by an unsecured creditor.

The receivership is concluded once the receiver has paid out his or her costs and expenses of the receivership, the debt of the secured creditor and certain statutory priority payments. Once the receivership is terminated, control of the company reverts to the directors (unless it is also in liquidation or administration).

**Mortgagee in possession**

A mortgagee of a company’s assets may itself take possession of, collect and sell secured assets (in reduction of secured debt), or it may appoint an insolvency practitioner or some other person to act as its agent to take those steps. In the instance of an appointment of an agent, the agent acts as the agent for the mortgagee and is personally liable (subject to any indemnity it has obtained) for his or her dealings with the secured assets on behalf of the mortgagee. The duty of receivers to obtain not less than market value of the best price reasonably obtainable also applies to mortgagees exercising powers of sale in relation to secured assets (whether as mortgagee or through an agent for the mortgagee).

**Schemes of arrangement**

A creditors’ scheme of arrangement is a compromise or arrangement between a company and its creditors (or some of them) effected pursuant to the process prescribed in the Corporations Act.

A creditors’ scheme of arrangement is generally considered to be costly, time consuming and cumbersome, which is why the voluntary administration and DOCA processes are more suitable in many cases. Unlike in an administration and DOCA, the Court is heavily involved in a creditors’ scheme of arrangement, and ASIC also has a critical role.

Unlike creditors voting to approve a DOCA (where voting is done on the basis that all creditors form the one class), in a creditors’ scheme of arrangement voting is by each class of affected creditors. Broadly, the process requires:

- ASIC being provided with a draft of the scheme documents at least 14 days in advance of the first court hearing;
- an initial or first court hearing at which orders are made convening a meeting or meetings of the affected creditors and approving the material (an explanatory statement) to be despatched to those creditors;
− a meeting or meetings of the affected creditors be held to vote on the proposed scheme of arrangement;
− a second court hearing to approve the proposed scheme of arrangement, assuming it has been passed by the requisite majority at the meeting or meetings of creditors. A creditors’ scheme of arrangement is effective once the orders made at the second court hearing are lodged with ASIC.

**Informal workouts and restructures**

Outside of the various formal processes, it is commonplace in Australia for bilateral or multilateral compromises to be reached between debtors and creditors (or groups of creditors), with or without the assistance of insolvency advisors.

The terms of those compromises may take a number of forms: they may contemplate the rescheduling of debts, reduction or cancellation of debts, effecting debt-for-equity swaps, or any number of variations. Those compromises can be effected through private contracts without the need for the involvement of the courts or other government bodies (although certain transactions involving publicly listed companies may require shareholder approval and be subject to various takeovers regulations, and transactions involving foreign parties may require Foreign Investment Review Board approval). Those new contractual rights will be enforceable in accordance with their terms as against the parties to them.

**Deregistration**

A company remains registered with ASIC even after it ceases trading. While registered it is still subject to the requirements set out in the Corporations Act, including payment of the annual review fee each year, notification of changes relating to the company and financial reporting.

ASIC has the power to deregister a company if ASIC does not believe that it is carrying on business, if the company has not responded to a compliance notice or if it has not paid its annual review fee for at least 12 months after the due date.

A company may apply to ASIC for deregistration if it meets certain requirements including that all members of the company agree to deregister, the company is not carrying on business, the company's assets are worth less than A$1000, the company has no outstanding liabilities and is not a party to any legal proceedings and the company has paid all fees and penalties payable under the Corporations Act.

Mergers and Acquisitions
5. Mergers and Acquisitions

Overview

Australia historically has had a healthy and vigorous mergers and acquisitions (M&A) market when international financial conditions have been favourable. Both hostile and negotiated takeover bids are frequently made for the shares of listed companies and Australia regularly ranks highly compared to other countries in terms of national M&A activity. Despite the volatility of the world capital market, Australian market conditions remain strong and M&A activity remains among the most active and significant in the world.

The Australian Government welcomes foreign investment, which can take a number of forms including setting up a new company, investing in an existing entity, or establishing a joint venture. For a detailed description of the restrictions on foreign investment into Australia, see Chapter 2 of this Guide, “Foreign Investment: Government Policy”.

Australia has a diversified economy, with a particularly strong primary industries base. Specific areas that have undergone significant merger and investment activity in the past few years (in terms of volume and value) include health care, energy, financial services, business services, information technology, transport/utilities, mining, industrials and chemicals, and real estate.

Private companies

Sale and purchase of private companies

A private business acquisition in Australia usually takes the form of either an asset acquisition, when the assets of a business are purchased and certain liabilities assumed, or a share acquisition.

A share acquisition may proceed by way of:

- the purchase of shares in an Australian company (direct share acquisition); or
- the purchase of shares in a non-Australian corporation which holds the shares of the Australian company (indirect share acquisition).
The legal consequences may differ depending upon whether the share acquisition is direct or indirect.

The table below outlines some possible advantages and disadvantages of share acquisitions and asset acquisitions.

**Share acquisition**

<table>
<thead>
<tr>
<th>Advantages</th>
<th>Disadvantages</th>
</tr>
</thead>
<tbody>
<tr>
<td>An acquisition of shares is often simpler than an acquisition of assets. In an asset acquisition, it is necessary to separately deal with and transfer or assign each asset and assumed liability. In a share acquisition, it is (generally) only necessary to transfer the shares in the target company, which in Australia is a straightforward process.</td>
<td>The acquisition of shares of the target company involves the purchase of the target company together with all liabilities (including contingent or undisclosed liabilities such as undisclosed tax liabilities, breaches of legislation affecting the business or claims by customers or employees) which may have an impact on the value of the shares being acquired. In contrast, under an asset purchase the seller retains all liabilities not specifically assumed by the buyer.</td>
</tr>
<tr>
<td>Profit on the sale of shares may be tax-free for sellers who have held the shares prior to 20 September 1985, being the date Australia introduced capital gains tax or “CGT”. For further information about CGT, see the section “Capital Gains Tax” in Chapter 6, below.</td>
<td>Due diligence enquiries relating to the acquisition of shares can be more extensive than in an acquisition of assets because the buyer is acquiring the target company together with all assets and liabilities (including contingent or undisclosed liabilities). This means the due diligence enquiries are often more wide-ranging than in an asset acquisition, where a buyer can select the assets and liabilities it wishes to acquire and target its due diligence enquiries accordingly.</td>
</tr>
</tbody>
</table>
### Advantages

There will be no stamp (share transfer) duty payable by the buyer on a share acquisition, provided that the target company does not hold significant land assets. If the target does hold land assets over a certain value thresholds stamp duty (called “landholder/land rich” duty) can apply on an acquisition of shares at the same rates as applied for an asset acquisition.

GST (similar to VAT) does not apply on a sale of shares as this is an input taxed supply (see Chapter 6, “Taxation”, below, for more details).

### Disadvantages

The warranties and indemnities in a share sale agreement may be more extensive than in an asset sale agreement because (as explained above) the buyer is acquiring all the liabilities of the target company and so extensive warranties and indemnities may be required to deal with the accompanying risks. This particularly applies in relation to taxation issues.

There may be limited recovery of input tax credits for both seller and buyer on a share sale (see Chapter 6, “Taxation”, below, for more details).

### Asset acquisition

<table>
<thead>
<tr>
<th>Advantages</th>
<th>Disadvantages</th>
</tr>
</thead>
<tbody>
<tr>
<td>The seller may more easily select which assets it wishes to divest under an asset sale than under a share sale. The seller may also wish to retain the corporate entity in order to utilise tax losses, which it cannot do under a share sale.</td>
<td>An asset acquisition is often more logistically complex and time consuming than a share purchase as it is necessary to separately deal with and transfer or assign each asset and assumed liability in accordance with the contractual, legislative or other requirements governing that particular asset or liability.</td>
</tr>
<tr>
<td>Advantages</td>
<td>Disadvantages</td>
</tr>
<tr>
<td>------------</td>
<td>--------------</td>
</tr>
<tr>
<td>The buyer can be more selective when deciding which assets to purchase and more precise about the extent of liabilities being assumed and is therefore less exposed to contingent or undisclosed liabilities. This is particularly important where there is concern relating to contingent or undisclosed liabilities of the company for which adequate provision cannot be made at the time of purchase.</td>
<td>Stamp duty generally applies on an asset acquisition at rates of duty up to 5.75% (although more generally settling at 5.5% depending on the State or Territory in which the particular asset is located). Depending on the nature of the asset acquired, surcharge duty rates of up to an additional 7% can also apply where the buyer is a foreign person, entity or trust. At law the liability to pay the duty is generally on the buyer, however, in some jurisdictions the liability for duty is joint and several. If GST is payable on the asset acquisition, stamp duty is calculated on the GST inclusive price (see Chapter 6, “Taxation”, below, for more details).</td>
</tr>
<tr>
<td>Due diligence enquiries relating to the acquisition of assets are generally more targeted than those relating to an acquisition of shares, as the buyer only has to do due diligence on those assets and liabilities that it is taking on rather than on the entire company. Depending on the outcome of the due diligence, this can result in fewer warranties and indemnities in the sale agreement.</td>
<td>It is necessary to obtain third party consents for formal assignments or novations of contracts, leases, licences and permits, as the contracting party under these arrangements is changing. This can be contrasted with a share sale, where it is only necessary to obtain third party consents in certain limited circumstances where change of control provisions are triggered (such as in real property leases).</td>
</tr>
<tr>
<td>Whilst a company may be prohibited from financially assisting the acquisition of its own shares (unless approved by shareholders in what is known as a “whitewash” procedure), it is not prohibited from assisting with the acquisition of its own assets.</td>
<td>Sometimes goods and services tax (GST) is payable with respect to a sale of assets if a business is not being sold as a “going concern” (see Chapter 6, “Taxation”, below, for more details).</td>
</tr>
</tbody>
</table>
**Memorandum of Understanding/Letter of Intent**

It is not unusual for negotiated acquisitions to begin with (or include) the negotiation of a letter of intent (LOI), which can also be known as a Memorandum of Understanding (MOU) or Heads of Agreement (HOA). The LOI is a useful outline of the transaction and may also serve to (among other things):

− prevent a seller from negotiating with other parties;
− allow relevant governmental approval processes to begin;
− facilitate fundraising for the transaction;
− define a buyer’s inspection and due diligence rights;
− provide for the treatment of confidential and proprietary information; and
− establish a schedule for completing all matters necessary to close the transaction.

The LOI may be expressed to be binding or non-binding, either wholly or in part. Unless drafted carefully, a Court may decide that the document is non-binding, even if it states that it is intended to be binding.

**Due diligence**

The buyer can reduce the legal and commercial risks of an acquisition through a number of procedures. For example, it may require comprehensive warranties in the acquisition agreement. However this method is not adequate by itself because a breach of warranty is only enforceable by litigation or arbitration, both of which can be costly and time consuming. The effectiveness of this method also depends on the creditworthiness of the seller and/or the warrantors at the time the judgement is enforced. Additionally, some liabilities may not reveal themselves until after the warranties have expired. The buyer, therefore, will usually also carry out pre-contractual investigations, commonly known as due diligence.

The purpose of due diligence is to gather information and identify any risks or problems associated with an acquisition and to assist the buyer in assessing the level and nature of legal risk in the business to be acquired. Based on the due diligence findings, the buyer will decide whether to go ahead with the transaction, to modify the transaction (for example, by revising the purchase price, inserting additional warranties or excluding certain assets with onerous liabilities from the acquisition) or to abandon the transaction. In addition to legal due diligence, a buyer will often also conduct commercial, financial and accounting due diligence.
The form of the acquisition will usually have an impact on the types of issues to be considered in the legal due diligence process. For example, if the transaction takes the form of an asset acquisition, due diligence may focus on the transferability of those assets. Where the transaction involves a share acquisition, it will be necessary to consider the impact of change in control clauses in contracts with third parties.

The level of due diligence undertaken often depends on the size or significance of the acquisition. Basic due diligence may simply consist of searches of publicly available information, such as:

- the database of the Australian Securities and Investments Commission (ASIC) to determine the identity of the shareholders and officers of the target;
- the Personal Property Securities Register to determine the existence of registered security interests over the assets of the target;
- the local land office to determine title to real property;
- the national trade marks, patents and design registers to determine ownership of intellectual property rights and the existence of third party interests in those rights; and
- the local court system for any litigation or winding-up proceedings involving the target.

In more significant acquisitions, a seller may make a physical or online data room of information available to potential buyers and their advisers. These data rooms allow potential buyers and their advisers access to documents relevant to the proposed transaction that may not otherwise be publicly available (for example corporate registers, key business contracts, leases, workplace agreements and policies, insurance polices, details of disputes, IT agreements, privacy policies, tax returns and other relevant information).

**Vendor due diligence**

Vendor (or seller) due diligence (VDD) has become increasingly common in Australia in competitive bid processes. VDD is effectively the same process as traditional buyer due diligence but is commissioned at the seller’s request and cost. The end product is a report that aims to address key concerns of a prospective buyer. Depending on the basis on which the report has been prepared it may potentially be relied upon by a buyer and its financiers.
Some advantages of conducting VDD may include the following:

− it allows the seller to evaluate the findings and to rectify, or at least mitigate, any problem areas before the sale process begins;
− it can serve to speed up the buyer due diligence process by providing a useful guide to the legal structure of the business and the key legal issues affecting the business;
− it can serve to reduce disruption to the seller’s business as the majority of the due diligence questions are likely to be raised by the seller’s lawyers in preparing the VDD report - this means that the business only has to deal with these questions once, as opposed to having to respond to the same questions from multiple buyer due diligence teams;
− it limits the amount of due diligence that a buyer is required to undertake - this saves a potential buyer time and money in conducting their own due diligence and can encourage more potential buyers to participate in the bid process; and
− it assists in identifying any relevant issues likely to arise in the sale process that might need to be dealt with in the sale documentation.

**Due diligence: other relevant considerations**

Although a seller has no positive duty to disclose information to a potential buyer, a seller may face liability under sections 1041E or 1041H of the *Corporations Act 2001* (Cth) (*Corporations Act*) or section 18 of Schedule 2 of the *Competition and Consumer Act 2010* (Cth) if it engages in conduct that is misleading or deceptive, or is likely to mislead or deceive. It is prudent for a seller to conduct an internal due diligence review to ensure it does not provide a potential buyer with misleading or incorrect information.

Australia’s insider trading laws prohibit a person (including the seller and the target company) from providing information to a potential buyer of the target company’s shares that is material, price sensitive and not generally available to the public. A potential buyer in possession of such information cannot acquire the shares. However a potential buyer of shares in a listed company may draw some comfort from the fact that the company is required to keep the market fully informed and to publicly release price-sensitive information immediately.
Public companies

The Corporations Act prohibits a person from acquiring a “relevant interest” in issued voting shares in a listed public company if, because of the transaction, either that person’s or someone else’s voting power in that company increases:

- from 20% or below to more than 20%; or
- from a starting point that is more than 20% and less than 90%,

unless the acquisition is made under one of the exceptions to the prohibition (discussed below).

The prohibition also applies to:

- voting shares in an unlisted Australian company with more than 50 shareholders; and
- voting interests in a listed managed investment scheme (such as a listed unit trust).

The key concept in determining whether an acquisition breaches the 20% limit is the “voting power” which results from the acquisition. “Voting power” is a term which aggregates the "relevant interests" held by a person (a term which widely draws in all direct and indirect holdings), together with the relevant interests of the person’s “associates”.

Acquisitions of voting shares in a company (including by acquiring existing issued shares and by being issued new shares) above the 20% limit are permitted under the Corporations Act in a number of circumstances, including:

- acquisitions made under an off-market takeover bid for either all or a fixed proportion of each shareholder’s shares in the company;
- acquisitions under an unconditional on-market takeover bid for all of the shares in the company;
- acquisitions made with the prior approval of the company’s shareholders in general meeting;
- “creeping” acquisitions of up to 3% of the company’s shares every six months by a shareholder who already holds at least 19%;
- an acquisition under a pro-rata rights issue;
− certain acquisitions by underwriters;
− certain downstream acquisitions which are deemed to result from upstream takeovers; and
− an acquisition under a scheme of arrangement.

On-market and off-market takeover bids and schemes of arrangement are the primary methods of obtaining control of a public company in Australia, and are discussed further below.

**Takeover bids**

A takeover is essentially a regulated offer made to all of a target company’s shareholders to buy their shares. The form of offer varies depending on which of the two takeover bid procedures is used: on-market (for quoted securities of listed targets only) or off-market (for listed or unlisted targets, and quoted or unquoted securities of a listed target). Takeover bids can be made in both “friendly” and “hostile” circumstances.

On-market bids must be unconditional and can offer only cash consideration. Target shares are acquired by the bidder on the ASX rather than by way of off-market acceptances. On-market bids are less common due to the fact that they are less flexible than off-market bids. However, they can be implemented quickly - a bidder may acquire shares on-market within hours of announcing the bid.

Off-market bids can be conditional (for example, on obtaining sufficient acceptances to gain control or obtaining regulatory approvals) and comprise of separate but identical offers of any form of consideration, including cash or securities of the bidder (or a mixture of both). Due to this increased flexibility, off-market bids are more common in Australia than on-market bids.

If, following a bid, the bidder achieves a holding of 90% or more in the target, the bidder will generally be able to compulsorily acquire the shares held by (or “squeeze out”) the remaining minority shareholders at the bid price.

For further information regarding the takeover regime in Australia, including a detailed description of the types of takeover bids and bid procedure, please refer to Baker McKenzie’s compendium publication *Takeovers Guide: Buying an Australian listed company.*
Schemes of arrangement

An alternative acquisition structure to a takeover bid is a “scheme of arrangement”. A scheme of arrangement is a Court-approved form of corporate reconstruction under which a bidder may acquire control of a target company. Schemes are processes that are driven by the target company and, accordingly, can generally only be implemented in “friendly” transactions.

The scheme structure involves a target company proposing a scheme to its shareholders and target shareholders voting on the proposal rather than offers being made by a bidder to, and accepted by, each shareholder individually (as occurs in a takeover bid). It delivers an “all or nothing” result. If a scheme is approved by target shareholders and by the Court, the scheme of arrangement binds all of the target company’s shareholders, including those who voted against it (or did not vote at all). Conversely, if a scheme is not approved by target shareholders or the Court then it does not become effective, even for those shareholders who voted in favour of the scheme.

The shareholder approval thresholds for a scheme are:

- approval by at least 75% of the shares which are voted on the scheme resolution (i.e. the “value test”); and
- approval from more than 50% in number of shareholders who vote at the meeting, regardless of how many shares they hold (i.e. the “headcount test”).

Whilst it may seem like obtaining a 75% vote in favour of a scheme would be a much easier path to obtaining control of a company than obtaining 90% acceptance of the takeover offers made under a takeover bid, this is not necessarily the case. The 75% approval requirement can be riskier than the 90% acceptance threshold for a takeover because:

- the bidder cannot vote any of the target shares it holds, and shareholder turnout for votes is generally not high. Accordingly, a shareholding of less than 25% (and potentially even less than 10%), can constitute a blocking stake; and
- the headcount test can be a hidden trap if there is grassroots opposition to the scheme. A blocking stake could be as low as a few percent of the target if the blocking stake is widely held.
A scheme of arrangement may, however, have particular advantages depending on the characteristics of the target company and whether special corporate actions need to be undertaken in connection with the transaction, such as amending the target’s constitution or approving a share buy-back. The structuring flexibility afforded by a scheme of arrangement is a key advantage as against the prescriptive requirements that govern takeovers, however, this is tempered by the difficulty to alter the terms of the scheme once they have been approved by the Court (meaning that bidders should be wary of using the scheme structure where a competing bid is likely).

Schemes of arrangement are also popular in private equity-funded “public to private” transactions given the flexibility in transaction structure that they offer. For example, different kinds of shareholders can be offered different kinds of consideration.

**Takeover regulation**

ASIC and the Takeovers Panel (Panel) are responsible for the supervision of compliance with takeovers provisions in the Corporations Act. The Panel was established to act as the main forum for the resolution of disputes stemming from changes in control or relating to the acquisition of substantial interests in a company. The Panel is made up of industry practitioners and experts in the field (including lawyers, investment bankers and company directors). The Panel has significant powers and anyone affected by the circumstances of the acquisition or an ASIC decision may apply to the Panel for a declaration, order or review. Contravention of the Panel’s orders is an offence.

Under a scheme of arrangement, it is the Court which oversees the scheme process (with the assistance of ASIC and having regard to the guidance offered by the Panel) and ultimately approves the scheme.

In addition, other industry-specific rules may be relevant, such as for broadcasting or gaming industry transactions.
Direct investment in listed entities

A foreign investor seeking to invest in an entity listed on the Australian Securities Exchange (ASX) may engage an Australian-based stockbroker to acquire publicly traded securities in that entity. ASX operates Australia’s major financial market for various financial securities including equities and derivatives, and provides listing, trading, risk management, clearing, settlement and depository services and market data for domestic and international companies. ASX is one of the world’s top 15 listed exchange groups measured by market capitalisation and it has a diverse domestic and international customer base.

The Clearing House Electronic Subregister System (CHESS) is ASX’s settlement system that is operated by the ASX Settlement. ASX Settlement authorises participants such as brokers, custodians and settlement agents to access CHESS and settle trades made by themselves or on behalf of their clients. CHESS facilitates the efficient transfer of legal title and settlement of market transactions with an electronic subregister system that provides irrevocable transfer of ownership and cleared funds without using paper documentation.

CHESS cannot be used directly for the transfer of securities of companies domiciled in countries whose laws do not recognise either (or both) electronic security holdings or electronic transfers, such as the US and Singapore. To overcome this difficulty, ASX has developed various mechanisms which provide a method of transferring and holding these foreign securities in CHESS, such as Chess Depository Interests. These mechanisms operate by separating the legal and beneficial ownership of the relevant foreign security – the legal title is held by an Australian depositary entity and the investor holds the beneficial interest. The securities are registered in the name of the depositary entity and are held by that entity on behalf and for the benefit of the holders of the beneficial interest.
Investors with access to the US markets are also able to invest in ASX-listed entities by way of American Depositary Receipts (ADR). An ADR is a security that trades in the US but which represents a specified number of securities in a non-US entity. The transfers of ADRs take place on the depositary’s books in the US rather than in Australia, and settlements of sales of ADRs are in US dollars and within the customary US settlement period. More than 200 Australian companies have instituted sponsored ADR programs which are mostly traded on the NASDAQ Bulletin Board and are not quoted on a US securities exchange. Depository receipt programs are also available on other foreign exchanges. These programs may or may not offer depository receipts in Australian securities.
6

Taxation
6. Taxation

General

The Australian Federal Government is the largest taxing authority in Australia. Taxes imposed by the Australian Government include income tax (which incorporates capital gains tax), fringe benefits tax, GST, customs duty on certain imports and excise duty on certain goods.

Australian income tax is generally based on a 30 June year end, although foreign corporations and their subsidiaries can generally obtain approval to lodge tax returns based on a substituted accounting period where, for example, the foreign parent company has a different fiscal year end.

The State and Territory Governments levy taxes such as stamp duties, land tax and payroll tax. The State Governments do not impose a tax on income or capital gains. Local Governments impose tax in the form of rates and levies.

Income tax

The most significant tax levied in Australia is income tax which is assessed in accordance with the Income Tax Assessment Act 1936 (Cth), the Income Tax Assessment Act 1997 (Cth) and the Taxation Administration Act 1953 (Cth) (together the Tax Acts). Generally, a resident of Australia is assessable to tax on income and capital gains derived by it from all sources, whether within or outside of Australia. A non-resident is assessable to tax only on income derived by it from Australian sources and on capital gains made (or deemed to be made) on assets that are classed as “taxable Australian property” (TAP). Very broadly, TAP includes direct interests in Australian real property; non-portfolio interests (10% or more) in entities that hold a majority of assets, by market value, that comprise Australian real property; business assets of an Australian permanent establishment; and options to acquire the preceding assets.

Capital gains made in respect of assets are usually only assessable if the asset was acquired on or after 20 September 1985. Certain types of income, such as dividends, interest and royalties, may be assessed to non-residents of Australia and offshore permanent establishments of Australian residents, on a gross basis, by way of withholding tax. Other types of income and capital gains are taxed on a net basis, that is after allowing for expenses and other allowances to be deducted from the
gross income and capital gains. If the country in which the non-resident entity is resident has a double tax agreement (DTA) with Australia, that agreement may result in an exemption or a reduction in the rate of tax applicable.

The income tax system is administered by the Australian Taxation Office (ATO). The impact of Australia’s income tax rules will depend on the structure of the Australian operations.

Companies generally

An Australian resident company is liable to pay Australian tax on income and capital gains derived from all sources, either within or outside Australia. Tax is, in general, imposed on the company’s net income. The rate of company tax is 30%. For small business entities (generally defined as an entity with an annual turnover of less than A$2 million) the company tax rate is 28.5%.

A non-resident company is liable to pay Australian tax on income derived from Australian sources (other than income subject to withholding tax) and capital gains made on TAP. The rate is also 30% on the net amount.

In addition to tax on income, the company will be required to pay tax on taxable fringe benefits provided to employees. The current fringe benefits tax rate is 49%.

Tax losses are able to be carried forward indefinitely and utilised, provided the company satisfies either the continuity of ownership test or the same business test. Groups of Australian resident companies that have a 100% common Australian resident parent can form a tax consolidated group. Wholly owned Australian resident subsidiaries of a foreign significant company may access the consolidations regime as well by forming a multiple entry tax consolidated (MEC) group. Where a tax consolidated group or MEC group is formed, the head company is treated as the sole taxpayer for income tax purposes with the other members of the group being effectively regarded as branches of the head company. A Tax Funding Agreement (TFA) is normally entered into by the group in order to determine each member’s liability for the group’s income tax liability. If the head company defaults in the payment of the group’s income tax (and certain related taxes), then the other members of the group become jointly and severally liable for the unpaid tax unless the group has entered into a valid Tax Sharing Agreement (TSA). Broadly, a TSA allocates responsibility for income taxes.
**Taxation of dividends**

Dividends paid out of income which has been subject to taxation at the company level are known as “franked” dividends under the Australian imputation system.

Broadly, the extent to which a company can “frank” a dividend depends upon the balance of its “franking account” at the relevant time.

The franking account represents an accumulation of the amount of profits subjected to the full corporate tax rate of 30%, either directly through tax paid or indirectly through franked dividends received from other companies. For example, given the current 30% company tax rate, for each A$100 of taxable profit A$30 of tax must be paid and an amount of A$70 can be paid as a fully franked dividend.

The imputation system allows Australian resident shareholders to receive franked dividends partially tax free or effectively tax free where the taxpayer’s marginal rate is less than or equal to 30%. If the taxpayer’s marginal tax rate exceeds 30%, any franked dividends received will be subject to additional tax in their hands.

If the shareholder’s marginal tax rate is, for example, 49% (being the top marginal tax rate for individuals), the dividend would be subject to an additional 19% tax. If the marginal rate is less than 30%, taxpayers are entitled to offset their “excess franking credit” against tax on other income. Australian resident individuals and certain superannuation funds are allowed a refund of excess credits.

Fully franked dividends paid to non-residents are exempt from dividend withholding tax. Partially franked dividends and unfranked dividends are subject to withholding tax (but only on the unfranked portion of the dividends). The rate of dividend withholding tax is 30% unless a DTA applies to reduce the rate. The rates allowed by the various DTAs are set out in Appendix A, at the conclusion of this Guide.

Dividend payments made by an Australian corporate entity or trust to a non-resident which represent “conduit foreign income” (broadly this is income which is derived from a source outside Australia) are not subject to Australian dividend withholding tax provided certain conditions are met. The conduit foreign income rules are designed to encourage the use of Australian corporate entities as holding companies for foreign entities.
Branches
Australia does not impose a separate branch profits tax. There is no withholding tax imposed on the remittance of profits of an Australian branch to its head office.

Rather, any income or capital gains derived by the branch would be subject to the general income tax provisions and any applicable DTA.

No taxable presence
Non-resident companies (that are resident in countries with which Australia has a DTA) may be able to organise their Australian operations without creating a permanent establishment. This is often the case with buy/sell operations. Such companies will not be taxable in Australia on their business profits if they do not have a permanent establishment in Australia (but may still be liable for tax on income subject to withholding tax and on capital gains in respect of TAP).

Partnerships
A “partnership” is defined for tax purposes to mean an association of persons carrying on business as partners or in receipt of income jointly but does not include a company. A general partnership is not a separate taxable entity, although it is required to lodge a tax return. The partnership return determines the net partnership income or loss for the year. Each partner must then include in their personal individual income tax return, their individual share of partnership income (or loss) and pay tax on this income accordingly. The net income or loss of a partnership is calculated as if the partnership were an Australian resident taxpayer.

Non-resident partners who are partners in an Australian partnership need only pay Australian tax on their share of the net income of the partnership attributable to sources in Australia. A partnership is not treated as an entity for Australian capital gains tax purposes; instead each partner is considered to own a fractional interest in partnership assets. Consequently, any capital gain or loss made on the disposal of such fractional interests is made by a partner rather than the partnership. A non-resident partner is only liable to Australian capital gains tax in respect of fractional interests in assets which constitute TAP.

Limited partnerships formed in Australia and those formed outside Australia, but which carry on business in Australia are in most instances treated as resident companies for income tax purposes and are taxed accordingly. Distributions to partners of those limited partnerships are taxed as dividends.
Trusts

For Australian tax purposes, trusts are not separate legal entities. As such, a trust is not liable to pay income tax although the trustee of a trust must lodge an income tax return on behalf of the trust. In certain limited circumstances, the trustee is liable to be assessed and to pay tax on the net income in his or her representative capacity. Australian resident beneficiaries are assessable on their share of the net income at their own individual marginal tax rate if they are presently entitled to the income of the trust at year end and are not under a legal disability.

In the case of non-resident beneficiaries, the Australian tax law differentiates between managed investment trusts and other types of trusts.

Very broadly, an Australian resident trust is a “managed investment trust” if it is a managed investment scheme for the purposes of Australian corporate law, is operated by an entity that has an Australian financial services licence and is considered widely held for Australian tax purposes. A trust will not be a managed investment trust if a foreign resident individual holds 10% or more of the interests in the trust.

Broadly, distributions of Australian-sourced income (other than dividends, interest and royalties which are subject to separate withholding tax rules) from a managed investment trust to a foreign beneficiary are subject to a final withholding tax. The rate at which the withholding tax applies depends on where the foreign beneficiary is resident. If the foreign beneficiary is resident in an exchange of information country (these are listed in Appendix C at the conclusion of this Guide) then the rate is 15% from 1 July 2012. If a beneficiary is resident in a country that is not an exchange of information country then the rate is 30%.

Where a foreign resident is a beneficiary of an Australian resident trust that is not a managed investment trust, then the trustee is liable to pay tax on the foreign beneficiary’s share of the trust’s net income. The tax rate that applies depends on whether the foreign resident beneficiary is a company (30%) or an individual/trustee beneficiary (49%). A foreign beneficiary that is a company or individual is required to lodge an Australian tax return and include the gross distribution in its assessable income. The beneficiary may deduct the tax already paid by the trustee and may claim a refund if the tax paid by the trustee exceeds the actual tax payable on the distribution.
Losses incurred in any particular year by a trust cannot be distributed to the beneficiaries and therefore remain within the trust. Losses can be carried forward and offset against future income of the trust provided certain trust loss rules are satisfied.

Certain public unit trusts, called “corporate unit trusts” and “public trading trusts”, are treated as companies for tax purposes (and taxed at the corporate rate of tax, currently 30%) and distributions from these trusts are taxed as if they were dividends.

**Individuals**

Resident individuals are assessable to income tax on income and capital gains from all sources, whether within or outside Australia. A non-resident is generally assessable to tax only on income derived from Australian sources and capital gains on TAP. Broadly, a person is a resident of Australia for tax purposes if the person:

- ordinarily resides in Australia;
- is domiciled in Australia, unless that person’s permanent place of abode is outside Australia;
- has actually been in Australia for more than half the year, unless that person’s usual place of abode is outside Australia and he/she does not intend to take up residence in Australia; or
- meets certain other tests relating to government funded superannuation.

Resident individuals are currently taxed on a net income basis at marginal rates from nil (on income of less than A$18,200) to 45% (on income in excess of A$180,000). In addition, a Medicare levy of 2% is payable on an Australian resident’s taxable income. Individuals who do not have private medical insurance may be liable for an additional Medicare levy surcharge of 1%, 1.25% or 1.5%, depending on their income level. There is also a 2% Temporary Budget Repair Levy. The surcharge applies to individuals with taxable income over A$90,000 or A$180,000 for a couple.

Non-resident individuals also pay the top marginal rate of 45% on income in excess of A$180,000. However, the lowest rate on non-residents’ income is 37%. Non-residents are not liable to pay the Medicare levy. The relevant rates of tax are set out in Appendix 2 at the conclusion of this Guide.
Australians engaged overseas

Salary or wages of an Australian resident subject to tax in a foreign country may be exempt from Australian tax, provided the individual is overseas for a continuous period in excess of 90 days and the foreign service is directly attributable to any of the following:

- The delivery of Australia’s overseas aid program by the individual’s employer;
- The activities of the individual’s employer in operating a developing country relief fund or a public disaster relief fund;
- The activities of the individual’s employer being a prescribed institution that is exempt from Australian income tax;
- The individual’s deployment outside Australia by an Australian government (or an authority thereof) as a member of a disciplined force; or
- An activity of a kind specified in the regulations.

Foreign debt funding and interest withholding tax

Very broadly, Australian interest withholding tax is levied at a 10% rate on interest paid from Australia to a non-resident or Australian resident in respect of a business carried on by a permanent establishment located outside Australia.

Interest withholding tax is a final tax on the interest income.

There are exemptions from interest withholding tax in respect of interest paid on certain debentures and syndicated loan facilities issued by certain companies and certain widely held trusts which satisfy a public offer test.

DTAs which Australia has entered into with other countries may reduce the rate of interest withholding tax to nil. Interest income derived by a financial institution that is wholly unrelated to and deals wholly independently with a borrower is exempt from Australian interest withholding tax where the financial institution is a resident of either the US, UK, Norway, Japan, South Africa or Finland, France and New Zealand and is able to claim the benefits of the DTAs that Australia has with those countries.
Thin capitalisation

Thin capitalisation arises where an investment in Australia is excessively geared. In this regard, legislation discourages excessive gearing by denying debt deductions (including interest and borrowing costs) where an entity’s debt levels exceed certain prescribed thresholds. The debt deductions are denied to the extent of the excess. The main thresholds in relation to foreign investment in Australia are:

- broadly, the average value of total debt must not exceed 90% of the average value of the total assets (subject to some adjustments for non debt liabilities and associate entity equity); or
- if debt exceeds the threshold outlined above, the debt satisfies an “arm’s length” test.

Under rules introduced late in 2001, the characterisation of debt and equity for the purposes of applying the thin capitalisation rules is based, broadly speaking, on economic substance rather than legal form.

There is a de minimis which provides that where the total debt deductions of the entity and its associate entities do not exceed A$2 million for income years commencing on or after 1 July 2014 and A$250,000 for previous years, the thin capitalisation rules will not apply to deny the entity’s debt deductions regardless of the entity’s gearing ratio.

The thin capitalisation rules contain specific provisions for financial entities.

The transfer pricing provisions may also limit the Australian investment vehicle’s ability to claim debt deductions if the Federal Commissioner of Taxation determines that these costs exceed their arm’s length amount. The transfer pricing provisions are applied first to require an arm’s length consideration for debt funding that is provided on a non-arm’s length basis with the thin capitalisation provisions then operating on the amount of debt deductions determined based on that consideration.

Corporation reconstruction

Following the introduction of the tax consolidation rules, the restructuring of groups that are not consolidated for Australian income tax purposes will be difficult as only very limited reconstruction relief is available.
Royalties
Generally, royalties paid by an Australian to a non-resident are subject to withholding tax. Tax is levied at the rate of 30% of the gross royalty paid. This is reduced to 10% by most of Australia’s DTAs. The DTAs Australia has with the US, UK, Finland, Norway, Japan, South Africa, New Zealand and France reduce this rate to 5%.

Management and service fees
A parent company may wish to charge its subsidiary a fee for services actually rendered as a manager and coordinator of group activities, such as planning and advising in service areas of finance, investment, production, marketing, insurance, personnel, legal research and the like. The fee will be exempt from Australian tax if the service fee does not have an Australian source or, where there is a relevant DTA, the fee is not attributable to a permanent establishment of the service provider in Australia.

If the fee is subject to Australian tax it must comply with the “arm’s length” requirement of the Australian transfer pricing rules.

Foreign exchange gains and losses
Realised exchange gains are generally assessable and exchange losses generally deductible.

With respect to a branch office, foreign exchange “losses” arising out of transactions between an overseas company and its Australian branch office are not deductible (nor are exchange “gains” assessable) since there is only one recognised entity involved in the transaction.

Taxation of financial arrangements
Australia has a specific regime regarding the taxation of gains and losses on financial arrangements. The definition of “financial arrangement” is broad and seeks to encompass, for example, loans, hedging contracts, certain foreign exchange transactions and so on.

Broadly, these rules seek to align the tax treatment of certain gains and losses over the life of a financial arrangement to prevent tax timing mismatches. To this extent, these rules will generally apply to the exclusion of other applicable rules. There are exemptions for specific types of entities and certain kinds of financial arrangements.
Certain tax-timing methods are prescribed to allow a particular entity to recognise gains and losses from a financial arrangement, including elective tax timing and character hedging rules that are designed to minimise tax timing and character mismatches. The rules also allow eligible taxpayers to elect to have their financial arrangements taxed on a fair value or retranslation basis, or to rely on their financial reports for taxation purposes. Taxpayers to which the taxation of financial arrangement provisions apply who do not elect to use these methods will be required to apply the accruals and realisation rule.

**Transfer pricing**

Certain rules are aimed at reducing the ability of companies to shift profits out of Australia to another tax jurisdiction, whether by transfer pricing or other means.

Australia’s transfer pricing rules have undergone substantial changes in recent years. The rules are contained in Subdivisions 815-B (for entities), 815-C (permanent establishments), and 815-D (trusts and partnerships) of the Tax Acts, as well as in Subdivision 284-E Schedule 1 of the *Taxation Administration Act 1953* (documentation and penalties). These new laws apply for income years commencing on or after 29 June 2013.

Subdivision 815-B covers dealings between separate legal entities. It requires certain amounts (taxable income, a loss of a particular sort, tax offsets and withholding tax payable) to be calculated only after regard is had to the “internationally accepted arm’s length principle”. Broadly, the premise of the new laws is to require entities to hypothesise the arm’s length conditions that would have operated between independent entities in similar circumstances to the actual conditions that have operated, having regard to both the form and economic substance of the relations. If that analysis suggests a transfer pricing benefit has arisen then a taxpayer should self-assess on this basis but in any case the Commissioner has the capacity to make an adjustment having regard to what the actual conditions would require.

Subdivision 815-B must be applied as consistently as possible with relevant guidance, which includes the OECD Guidelines and the OECD Model Tax Convention on Income and Capital, each as at 22 July 2010. The Subdivision applies to dealings between the Australian taxpayer and its related parties whether or not residing in treaty partner countries.
Under Division 284 of Schedule 1 of the *Taxation Administration Act 1953*, an entity is liable to administrative penalties if a transfer pricing benefit arises under Subdivision 815-B of the Tax Acts. The penalties are higher if the entity’s transfer pricing treatment was not reasonably arguable.

Subdivision 284-E has the effect that an entity must meet the transfer pricing documentation requirements in the subdivision for its transfer pricing treatment to be reasonably arguable, notwithstanding the possibility the taxpayer’s position is ultimately not sustained.

**Capital gains tax**

Capital gains realised on assets acquired after 19 September 1985 are subject to income tax unless specifically exempted. An “asset” for capital gains tax purposes is defined as any form of property and includes intangible as well as tangible property.

A net capital gain (capital gains less capital losses) is included in a taxpayer’s assessable income. Income tax is imposed at the taxpayer’s marginal rate of tax on any net capital gain made by the taxpayer.

In some cases, the market value of the asset will be substituted for the consideration (if any) received on disposal of the asset. This will occur, for example, in the case of gifts and certain disposals not at “arm’s length”.

A capital loss, being the difference between the unindexed cost of an asset and the proceeds of sale, may be offset only against capital gains. Most capital losses can be carried forward indefinitely until absorbed against future capital gains (subject to satisfying either the continuity of ownership test or the same business test).

Australian residents are subject to tax on the disposal of all worldwide assets. Non-residents will generally be liable for tax on gains in respect of TAP. Very broadly this includes direct interests in Australian real property; non-portfolio interests (10% or more) in entities that hold a majority of assets, by market value, that comprise Australian real property; business assets of an Australian permanent establishment; and options to acquire the preceding assets. Non-residents otherwise liable to capital gains tax on the disposal of TAP may have the protection of a DTA (for example, when the capital gain represents a business profit).
Australian individuals (and certain other taxpayers such as trusts and complying superannuation entities) may be able to claim a discount on capital gains made on the disposal of certain assets which they have held for at least 12 months. Companies cannot claim the benefit of the discount. Broadly the discount exempts a portion of the capital gain made from tax. For complying superannuation entities the discount portion is 33.33%, whilst the discount for individuals and trusts is 50%. This discount concession is available to Australian residents and non-residents. Where an entity claims the discount concession, they are required to calculate their capital gain without indexing for inflation (as described above). Non-residents are not eligible for the 50% discount on capital gains earned after 8 May 2012 on taxable Australian property, such as real estate and mining assets. Non-residents are still entitled to a discount on capital gains accrued prior to 8 May 2012 (after offsetting any capital losses), provided they choose to value the asset as at that time.

**Foreign Resident Capital Gains Withholding**

New rules apply to vendors disposing of certain taxable Australian property under contracts entered into from 1 July 2016. A 10% non-final withholding will be applied to these transactions at settlement, to be withheld and paid by the purchaser. The vendor may claim a credit against any withholding tax paid by filing an income tax return for that year.

Australian resident vendors selling real property can obtain a clearance certificate from the ATO prior to settlement in which case the withholding does not apply. For other asset types (e.g. indirect Australian real property interests and options or rights to acquire real property) that are in scope, a vendor declaration they are not a foreign resident will also mean withholding is not required by the purchaser. Variation applications can also be made by the Vendor in some cases.

**Taxation of foreign source income**

Australia taxes its residents on their worldwide income subject to:

- an exemption system for certain non-portfolio income derived by Australian resident companies from foreign companies in which the Australian resident company holds an interest of 10% or more;
- an exemption for income taxed on an accruals basis under the controlled foreign corporation rules or the foreign investment fund rules; and
- a foreign tax income offset system for income that is not exempt. Australia generally does not tax non-residents on income which is not sourced in Australia.
Fringe benefits tax
Fringe Benefits Tax at the rate of 49% is imposed on employers (both resident and non-resident) on the taxable value of fringe benefits provided to employees or associates of employees in Australia. There are specific rules for determining the taxable value of various types of fringe benefits, including the private use of motor cars, free or low-interest loans, release of debts, payments of private expenses, free or subsidised residential accommodation, living away from home allowances, and free or discounted goods or services. However, certain other benefits may be treated as direct taxable income to the employee rather than a fringe benefit. The fringe benefits tax is tax deductible for ordinary income tax purposes. The fringe benefits tax year is the 12 months beginning 1 April and ending 31 March.
Employees are exempt from tax on fringe benefits.

Goods and services tax
Australia’s GST is a broad-based consumption tax on supplies of goods, services, real property, intangibles and other rights in the course of an enterprise (among other things). The rate of GST is 10%. This is a flat rate on all taxable supplies.

The GST operates in the same way as similar value-added taxes in comparable jurisdictions such as Canada, the United Kingdom and New Zealand. While makers of taxable supplies will be liable to GST on those supplies, they will be able to offset this liability with input credits to which they are entitled as a result of taxable supplies they themselves have acquired.

There are a limited number of exemptions. Importantly, the acquisition of a going concern (for example the sale of a business), should generally be exempt from GST subject to satisfaction of certain statutory requirements. Exports, supplies of certain food and medical supplies will also be exempt. Such supplies are often referred to as zero-rated in other jurisdictions, however for Australian purposes they are known as “GST-free”. This results in no GST being payable on the supply of the goods or services with the supplier being able to claim an input tax credit for GST paid on any inputs acquired in making the supply.

Some other supplies are input taxed. This means that no GST will be payable on the supply but the supplier will need to absorb some or all of the GST costs passed on to it by its own suppliers. Certain financial supplies (for example, making of loans, transfer and issue of shares in companies among other things) and residential real
property make up the bulk of input taxed supplies. Merger and acquisition activity is likely to result in an entity making financial supplies with the effect that the entity may need to deny recovery of all or some of its input tax credits.

**Customs duty**

Customs duty may be payable on imported goods. The amount of customs duty is generally calculated by multiplying the duty rate (generally expressed as a percentage) by the customs value of the imported goods. In Australia, customs duty rates are most commonly between zero and 5%, however some industries (for instance textiles, clothing, footwear, automotive, alcohol, tobacco and petroleum) are subject to higher rates.

The Australian Customs and Border Protection Service administers schemes for either removing the liability to pay customs duties (for example where there are no substitutable goods produced in Australia) or deferring the liability to pay customs duties (for example manufacturing in bond).

See Chapter 12, “Importing and Exporting”, below in this Guide, for further details on customs issues.

**Stamp duty**

Stamp duty is a tax levied on transactions by State and Territory Governments including conveyances of property (including business assets) and certain dealings in real estate. The duty applies to transactions evidenced by instruments, as well as transactions effected without a document being brought into existence.

The legislation imposing duty varies between States and Territories. Different rates of duty apply to the dealings in different types of transactions. As at June 2016, the highest effective rate of duty is 5.75% (although the rate more generally settles at 5.5% depending on the State or Territory in which the particular asset is located). In addition, depending on the nature of the asset acquired (in particular residential property), surcharge duty rates of up to an additional 7% can also apply where the buyer is a foreign person, entity or trust.

It is important to note that a party to a transaction subject to duty will usually not be able to enforce its rights under the contract unless the relevant document has been presented at the appropriate State Revenue Office and has been duly stamped. The parties to a transaction subject to duty have a limited period of grace from the date on which the document was first signed to lodge the
document for stamping and pay any estimated duty without attracting any penalties. The relevant grace period ranges between 30 days to six months depending on the State or Territory involved.

Stamp duty may also be payable on transactions involving a change in ownership of Australian property, even if the change occurs through an acquisition of a non-Australian entity by a non-Australian from a non-Australian.

Where the transaction subject to duty is between certain related parties (for example members of the same corporate group) as part of a restructure, stamp duty relief may be available where certain statutory requirements are met.

Over recent years, there has been a program of abolition of stamp duty on certain transactions, for instance on some share dealings, loan security arrangements and business asset transfers. Each State and Territory has a different abolition program and so it is important to seek advice to confirm the current state of the abolition program depending on the nature of the transaction contemplated.

**Land Tax**

Land tax is an annual tax levied on the ownership of real property by State and Territory Governments. It applies regardless of whether the land owned is a freehold estate (for example fee simple or life estates) a leasehold estate (where that estate is leased from the Crown), or a strata lot. Other persons may also be “deemed” to be owners and subject to land tax (for example, shareholders in a company title unit scheme).

Land tax is calculated on the aggregate land values of all taxable lands owned by a taxpayer in a particular land tax year (either year ending 30 December or 30 June) over relevant thresholds. The rates of land tax vary between States and Territories. The highest effective rate is (at June 2016) 3.7%. Surcharge rates apply in some jurisdictions for trusts, absentee owners and foreign owners.

Some exemptions from land tax are available, principally in respect of land used as the principal place of residence of the owner or land used for primary production purposes. Land tax payable on ownership of commercial real estate may in some cases be able to be recouped from tenants as an outgoing under the terms of the commercial lease.
Australian business number

Businesses that make supplies in the course of carrying on an enterprise in Australia should generally register for an Australian Business Number (ABN). This is because if the business fails to quote its ABN to a recipient of its supplies then any consideration receivable by the business may be subject to a 46.5% withholding tax. Applying for an ABN is not compulsory.

The ABN will eventually replace the Australian Company Number (ACN) and will ordinarily be based on the ACN with an additional two digits. It will be a single identifier for each business dealing with the Australian Tax Office and other government bodies and should streamline business reporting requirements.

A company must use its ACN on its common seal, negotiable instruments, public documents and wherever else an ACN is required or permitted to be used under federal Australian law. However, if the last nine digits of a company’s ABN are the same as the last nine digits of its ACN then the company may use its ABN instead of its ACN for these purposes.

Payment of tax

Self assessment system

Australia has a self-assessment system, that is, taxpayers are responsible for determining their own assessable income. The self-assessment system is supported by a binding ruling system that allows taxpayers to obtain advance rulings from the ATO. A taxpayer can challenge an unfavourable ruling.

GST is a self-assessment tax whereby businesses account to the ATO for their GST liabilities and credit entitlements by making a GST return in their Business Activity Statement (BAS) which is filed monthly, quarterly or, for some smaller business, annually.

Stamp duty is also a self-assessment tax whereby taxpayers (or their advisers) determine the duty liability on the transaction and lodge documents and pay the estimated duty within the statutory timeframes. Private rulings on the duty consequences of a transaction may be obtained in certain circumstances.

Land tax is paid on a returns basis following the issue of a Notice of Assessment by the relevant State or Territory Revenue Commissioner.
Companies
Companies must pay their income tax in advance by way of quarterly instalments or, in some instances, an annual instalment of taxation. The quarterly instalments are payable within 21 days after the end of each quarter with the amount based on the ordinary income for that quarter.

An annual income tax return must also be lodged by companies showing the total income and deductions (as well as other disclosure information) for the year. The balance of any unpaid tax must then be paid.

Other entities
Taxpayers other than companies (such as individuals, trusts and, for these purposes, partnerships) must lodge a return of income each year. Such taxpayers may also be liable to pay tax in advance on a quarterly basis.

Obligations of employers
Entities and persons employing other persons in Australia are required to deduct tax from payments of salary or wages to those employees. The amounts deducted must then be forwarded to the ATO. Substantial penalties apply for failure to observe these requirements. Similar obligations apply in relation to some contractors.

Exchange control and tax screening requirements
Exchange controls were effectively abolished in Australia for most transactions. Notwithstanding this change, there is a requirement that exports and imports of Australian and foreign cash in the amount of A$10,000 or more must be reported to the Australian Transaction Reports and Analysis Centre (AUSTRAC). AUSTRAC is Australia’s anti-money laundering and counter-terrorism financing regulator and specialist financial intelligence unit. AUSTRAC does not have any power to restrict a person from transferring currency to or from Australia; rather, its role is limited to collecting data and forwarding it to various governmental authorities, security, social justice and revenue agencies.
Double tax agreements

Australia has agreements for the avoidance of double taxation with a large number of countries, and undertakes an active program to pursue additions to its double tax agreements (DTA) network. Countries with which Australia has double tax agreements are set out in Appendix A at the conclusion of this Guide. By and large, these treaties are modelled on the OECD draft agreement but in important instances they diverge markedly from that model. Various treaties including those with the US and UK provide for information sharing with overseas revenue authorities to varying degrees.

Research and development tax incentive

The Research and Development (R&D) Tax Incentive is an entitlement program that helps businesses offset some of the costs of doing R&D. The Program aims to help more businesses do R&D and innovate.

The scheme operates by means of a 45% refundable tax offset (equivalent to a 150% deduction) for eligible entities with an aggregated annual turnover of less than A$20 million, so long as that entity is not also income tax exempt. For all other eligible entities, the tax offset is reduced to 40% and made non-refundable. The offset applies to both expenditure on eligible research and development activities, and to depreciation on assets used for those activities.

The R&D Tax Incentive is available to a company incorporated:

- under an Australian law;
- under a foreign law that is an Australian resident for tax purposes; and
- under a foreign law that is a resident of a foreign country with a double tax agreement with Australia and who carries on business through a permanent establishment of the body corporate in Australia.

AusIndustry and the Australian Taxation Office are responsible for delivering the R&D Tax Incentive.
Regional headquarters program

The Australian Government has a regional headquarters program (RHQ) to facilitate the establishment of regional headquarters and regional operating centres by international companies. A company must meet the Treasurer’s guidelines which require the company in Australia to provide certain management-related services to an associated company outside Australia.

If a company qualifies under the RHQ, certain tax incentives are available for deductibility of business expenses in respect of set-up costs. The incentives provide that certain costs such as relocation and incorporation costs associated with the establishment of an RHQ can be deductible expenses for tax purposes, whether of a revenue or capital nature, and which are incurred within a two-year window from one year before and after the RHQ company first derives assessable income from the provision of “regional headquarters support”.

7

Banking and Finance
7. Banking and Finance

General

Australia is well served by a wide range of local and foreign financial institutions providing a comprehensive range of financial services.

The Australian financial sector is subject to the supervision of the Australian Prudential Regulation Authority (APRA), the Reserve Bank of Australia (Reserve Bank) and ASIC. These agencies are members of the Council of Financial Regulators, which is the non-statutory coordinating body for Australia’s main financial regulatory agencies, and which contributes to the efficiency and effectiveness of financial regulation and promotes stability of the Australian financial system.

APRA has responsibility for prudential regulation of all banks, insurance companies, superannuation funds, credit unions, and friendly and building societies. APRA is also responsible for the collection of statistical data from registered financial corporations, APRA-regulated entities and subsidiaries of Authorised Deposit-taking Institutions (ADIs), amongst others.

The Reserve Bank has responsibility for the overall stability of the Australian financial system, regulation of the payments system and for setting monetary policy.

ASIC is responsible for corporate regulation of financial services, consumer protection and market integrity functions in respect of banks, finance companies, merchant banks, building societies, credit unions, friendly societies, superannuation interests, retirement savings accounts and general and life insurance products.

Classes of financial institutions and their regulation

Authorised deposit-taking institutions

An Authorised Deposit-taking Institution (ADI) is a body corporate which is granted an authority to carry on “banking business” (which consists of both taking deposits and making advances) in Australia by APRA under the Banking Act 1959 (Cth) (Banking Act). The fact that a body corporate has an authority to carry on banking business in Australia does not mean that it may call itself a “bank”. APRA’s consent is required before an ADI can assume or use the words “bank”, “banker” or “banking” (in any language) in its name or in connection with its business.
There are four major banks and a number of smaller banks and foreign-owned banks operating in Australia as ADIs. The ADI category also includes building societies and credit unions which engage principally in the provision of personal finance to the retail market. The Australian Government has a policy known as the “Four Pillars Policy”, which establishes that there should be no fewer than four major domestic banks to maintain appropriate levels of competition in the banking sector. Foreign banks are permitted to operate in Australia through a branch or through a locally incorporated subsidiary. A locally incorporated subsidiary or a branch of a foreign bank wishing to carry on a banking business in Australia must be an ADI and regulated under the Banking Act, or obtain an exemption from the requirement to be an ADI.

APRA is responsible for the prudential regulation of all ADIs under the Banking Act. ADIs are required to observe capital adequacy standards set by APRA. ADIs are also required to provide information to APRA if requested, including statements of assets and liabilities and other prescribed information on a regular basis.

Ownership of ADIs is subject to restrictions under the Financial Sector (Shareholdings) Act 1998 (Cth). The Act restricts a person from holding, together with the interests of the person’s associates, more than 15% in a financial sector company without the prior approval of the Federal Treasurer.

Under the Financial Sector (Collection of Data) Act 2001 (Cth), APRA may determine reporting standards for ADIs and require them to provide APRA with information about their businesses and activities. APRA’s current requirements for ADIs include the provision of information relating to capital adequacy and off-balance sheet business. ADIs, however, are not “registrable corporations” under that Act and therefore the registration regime under that Act does not apply to them.

**Investment banks and other financial corporations**

Investment banks offer a number of financial services to the corporate market. Often the investment banks are owned by foreign banks not themselves authorised to conduct banking business in Australia.

Such investment banks may operate without authorisation from APRA if they are not conducting banking business in Australia for the purposes of the Banking Act. However, such an investment bank will not be permitted by APRA to use the term “bank” and its derivatives in its name or business unless it is authorised as an ADI.
Investment banks may be subject to the requirement to register under and otherwise comply with the *Financial Sector (Collection of Data) Act 2001* (Cth).

The *Financial Sector (Collection of Data) Act 2001* (Cth), with limited exceptions, applies to foreign corporations, and trading or financial corporations formed within Australia, that are not ADIs if the following requirements are satisfied:

- the sole or principal business activities in Australia of the corporation are the borrowing of money and the provision of finance;
- the total value of assets of the corporation in Australia comprising debts due to the corporation resulting from transactions entered into in the course of provision of finance exceeds 50% of the sum of the values of all the assets in Australia of the corporation; or
- the corporation engages in the provision of finance in the course of carrying on a business in Australia of selling goods by retail and the total value of assets of the corporation (and any related corporation) comprising debts due to the corporation resulting from transactions entered into in the course of provision of finance exceed A$25 million.

“Registrable corporations” under the *Financial Sector (Collection of Data) Act 2001* (Cth) must register under that Act with APRA. Under that Act, APRA is required to prepare a list of registered corporations (which are known as “registered entities” or “Registered Financial Corporations” (RFCs)) in which the corporations are divided into such categories as APRA determines. Categories of corporations under the *Financial Sector (Collection of Data) Act 2001* (Cth) include money market corporations, intra group financiers and other corporations (such as finance companies, general financiers and pastoral finance companies). Investment banks are usually placed in the category of money market corporations.

Under the *Financial Sector (Collection of Data) Act 2001* (Cth) and its regulations, a registered corporation is required to furnish to APRA statements of assets and liabilities and other prescribed information on a regular basis for statistical purposes. Corporations registered under the *Financial Sector (Collection of Data) Act 2001* (Cth) are prohibited from advertising that they are “registered under the Financial Sector (Collection of Data) Act 2001” or “registered with APRA”.

The major source of regulation of investment banks and other non-ADI financial corporations is the *Corporations Act 2001* (Cth) (Corporations Act), particularly in the areas of licensing, conduct and the taking of deposits.
Others

Finally, there are a number of other financial institutions including superannuation funds, friendly societies, insurance companies and finance companies, engaging principally in the provision of personal finance to the retail market. Superannuation funds, building and friendly societies, credit unions and insurance companies are subject to the prudential supervision of APRA.

Foreign banks operating in Australia

Foreign banks may operate through locally incorporated subsidiaries, through branches or through representative offices in Australia. APRA has issued prudential statements which clarify the conditions attaching to the operation and the entry criteria for foreign banks wishing to operate in these ways.

“Banking business” consists of both taking deposits and making advances. To carry on banking business in Australia, foreign banks must obtain a banking authority issued by APRA under the Banking Act. A banking authority may be granted by APRA subject to conditions, and these may be varied, revoked, or added to at any time by APRA by notice in writing. Foreign banks may either operate as a branch or as a locally incorporated subsidiary, or may also hold a dual authority to operate both as a locally incorporated subsidiary and as a branch.

The granting of an authority to carry on banking business comes with the right to use the expression “authorised deposit-taking institution” (ADI). Additional consent from APRA is required to use the words “bank”, “banker” or “banking” (in any language) in a name or in connection with a business.

Only bodies corporate can carry on banking business in Australia.

Applicants for a banking authority are expected to be able to comply with APRA’s prudential requirements, which are set out in various prudential statements, from the commencement of their banking operations.

There are no restrictions on the number or size of operations of foreign banks operating as subsidiaries or branches in the Australian market.

Locally incorporated subsidiaries of foreign banks

Foreign bank subsidiaries incorporated in Australia are expected to maintain a significant presence in Australia and add some depth to the local banking markets.
A locally incorporated subsidiary of a foreign bank must satisfy many of the same legislative and prudential requirements as Australian-owned banks.

The criteria for establishment of a foreign bank subsidiary in Australia include:

- being incorporated in Australia;
- having approval from the foreign bank parent’s home supervisor to establish a locally incorporated ADI in Australia;
- satisfying APRA that its parent is subject to adequate standards of prudential supervision in their home country and is supervised on a consolidated basis consistent with the provisions of the Basel Concordat, and that the home supervisor is willing to cooperate in the supervision of the subsidiary in terms of the Concordat;
- holding a minimum amount of A$50 million in core capital;
- satisfying APRA that it is able to comply with the capital adequacy standards set by APRA from the commencement of its banking operations;
- complying with the Financial Sector (Shareholdings) Act 1998 (Cth) in terms of its ownership;
- ownership in its parent is widely spread unless exemptions from the Financial Sector (Shareholdings) Act 1998 (Cth) apply;
- all its substantial shareholders, including its parent, are able to demonstrate to APRA that:
  » it is “fit and proper” in the sense of being well-established and financially sound entities of standing and substance;
  » its involvement in the bank will be a long-term commitment; and
  » it is able to contribute additional capital, if required;
- satisfying the requirements set out in Prudential Standard APS 510 Governance in relation to the composition and functioning of its board;
- satisfying APRA that it has policies in place to ensure that persons who hold the key positions within the subsidiary are fit and proper in accordance with Prudential Standard APS 520 Fit and Proper;
- satisfying APRA that its proposed (or existing) information and accounting systems are adequate for maintaining up-to-date records of all transactions and commitments undertaken by the subsidiary, so as to keep management continuously and accurately informed;
satisfying APRA that its proposed risk management and internal control systems are adequate and appropriate for monitoring and limiting risk exposures in relation to its domestic and offshore operations from the commencement of its banking operations;

demonstrating that its arrangements for reporting to the parent are adequate;

satisfying APRA as to its capacity to produce accurately and promptly all required statutory and prudential information;

having in place arrangements with an external auditor to report to APRA on their observance of prudential standards, compliance with statutory requirements, the reliability of information supplied to APRA and any other matters agreed between the bank, the external auditor and APRA;

satisfying APRA on the adequacy of its internal audit arrangements; and

submitting to APRA a three-year business plan which includes information relating to the proposed structure of the business, financial projections, and systems and controls.

Branches of foreign banks

Foreign banks operating as branches in Australia (which are also known as “foreign ADIs”) must submit their local operations to the prudential supervision of APRA and provide information to APRA on request in connection with their prudential responsibilities. Foreign bank branches, unlike locally incorporated subsidiaries, are not subject to the depositor protection provisions of the Banking Act. They are not required to maintain endowed capital in Australia and are not subject to any capital-based large exposure limits. As there is less protection for depositors with branches compared to those with locally incorporated banks, foreign bank branches are required to confine their deposit-taking activities to “wholesale” markets.

In particular they are not permitted to accept initial deposits and other funds from individuals and non-corporate institutions of less than A$250,000, but they are able to accept deposits and other funds in any amount from incorporated entities, non-residents and their employees.

Moreover, they must disclose to customers that they are not subject to the depositor protection provisions of the Banking Act. There are no other specific restrictions placed on sources of funding or on the use of funds. Specifically, cheque accounts and credit card accounts may be offered subject to the above.
Doing Business in Australia

If foreign banks wish to undertake “retail” deposit taking, locally incorporated banking subsidiaries must be established.

A foreign bank applying to operate a branch in Australia must satisfy a number of criteria including that it:

− has approval from their home supervisor to operate a banking operation in Australia;
− is incorporated and authorised as a bank under the laws of its home country;
− complies with the Financial Sector (Shareholdings) Act 1998 (Cth) in terms of its ownership (or is otherwise exempt from the requirements of the Act);
− can demonstrate to APRA that both itself and its substantial shareholders are “fit and proper” in the sense of being well-established and financially sound entities of standing and substance, that the involvement of the substantial shareholders in the bank will be a long-term commitment and that they are able to contribute additional capital, if required;
− is able to meet capital adequacy standards required by its home-country supervisor, and these standards must be consistent in all substantial respects with the Basel II Framework, and the Basel III Framework from 1 January 2013;
− is subject to adequate standards of prudential supervision in its home country, and is supervised on a consolidated basis consistent with the provisions of the Basel Concordat (and its home supervisor must be willing to cooperate in the supervision of the subsidiary in terms of the Concordat);
− can satisfy APRA that its proposed risk management and internal control systems are adequate and appropriate for monitoring and limiting risk exposures in relation to domestic and offshore operations from the commencement of the banking operations;
− can demonstrate that arrangements for reporting to head office are adequate;
− can satisfy the requirements set out in Prudential Standard APS 510 Governance and in Prudential Standard APS 520 Fit and Proper to the extent applicable;
− can satisfy APRA that proposed (or existing) information and accounting systems are adequate for maintaining up-to-date records of all transactions and commitment undertaken by the bank, so as to keep management continuously and accurately informed;
can satisfy APRA as to the capability of producing accurately and promptly all required statutory and prudential information, and as to the appropriateness and soundness of the proposed operational arrangements for the branch;

has in place arrangements with an external auditor to report to APRA on the observance of prudential standards, compliance with statutory requirements, the reliability of information supplied to APRA and any other matters agreed between the bank, the external auditor and APRA;

can satisfy APRA on the adequacy of internal audit arrangements; and

can submit to APRA a three-year business plan which includes information relating to the proposed structure of the business, financial projections, and systems and controls.

Operating both a branch and a locally incorporated subsidiary

A foreign bank may operate both a branch and a locally incorporated banking subsidiary in Australia, but the branch and subsidiary must conduct their business so as to make clear their separate legal status and banking authorisation. In particular, the branch and locally incorporated banking subsidiary are required to have:

- separate books of account;
- separate statistical (including prudential) reporting to APRA;
- separate internal risk monitoring and management systems;
- separate systems of delegation;
- separate chief executive officers responsible for the proper management and prudent operation of the branch and subsidiary respectively; and
- processes to ensure customers understand which entity they are dealing with and the implications for their interests when staff are undertaking dual roles for both the branch and the locally operated subsidiary.

Banking transactions between a subsidiary bank and a branch should be at “arm’s length”, and therefore, the subsidiary would not normally be expected to purchase assets from the branch. The branch and the subsidiary may share premises and support services such as personnel, financial control and treasury operations.

A limit is placed on the exposure (both direct and indirect) of a banking subsidiary to its parent bank (including its Australian branch).
Representative offices

A foreign bank wishing to establish a representative office in Australia is required to meet minimum entry standards and comply with operating conditions set by APRA. An applicant must satisfy APRA that it:

- is recognised as a bank under the laws of its home country;
- is of substance and good repute;
- is subject to adequate standards of prudential supervision in its home country; and
- has received approval from its home supervisor to establish a representative office in Australia.

A representative office must only conduct liaison services and must not conduct any form of banking business in Australia. The range of prohibited activities includes soliciting or receiving deposits, granting loans, dealing in or issuing securities, dealing in derivatives products, and buying or selling foreign exchange. The representative office must not engage directly in financial transactions, except those necessary or incidental to the maintenance of the office in Australia.

The activities of the representative office must be kept separate from any financial enterprise operating in Australia. The foreign bank establishing a representative office must be registered as a foreign company under the Corporations Act.

APRA has indicated that it prefers that a representative office be established before the parent entity seeks to establish an ADI in Australia so that APRA can readily liaise with a local entity through the authorisation process.

Regulation of financial services

Chapter 7 of the Corporations Act regulates licensing, product disclosure and conduct in relation to the provision of financial services and the operation of financial markets in Australia.

An Australian financial services licence is required to carry on a business of providing financial services. A person will provide a financial service if they:

- provide financial product advice;
- deal in a financial product;
- make a market for a financial product;
operate a registered managed investment scheme;
– provide a custodial or depository service; or
– engage in conduct of a kind prescribed by regulations.

“Financial products” are facilities through which a person makes a financial investment, manages financial risk, and/or makes non-cash payments. They include:

– securities;
– interests in managed investment schemes (including cash management trusts);
– derivatives;
– certain types of insurance contracts;
– interests in superannuation funds;
– retirement savings accounts (RSA);
– deposit-taking facilities made available by an ADI;
– debentures, stocks or bonds issued by a government; foreign exchange contracts which are not to be settled immediately;
– certain store value cards and other non-cash payment facilities; and
– margin lending facilities.

The following, among others, are specifically excluded from the definition of “financial product”:

– credit facilities;
– foreign exchange contracts where settlement occurs immediately;
– letters of credit;
– bank cheques;
– bank guarantees; and
– certain loyalty schemes and gift cards.

An Australian market licence will be required to operate a financial market in Australia unless the market is exempt.

The product disclosure regime for financial services is based on three documents:

– The Financial Services Guide, which must be provided to retail clients if financial services are provided;
– The Statement of Advice, which must be provided to retail clients if personal advice is provided; and

– The Product Disclosure Document, which must be provided to retail clients if financial products are issued, recommended, and in limited circumstances, sold.

For financial products which are not insurance, superannuation or RSA products, the financial product or service is considered to be provided to a retail client if:

– the financial product or service provided has a price or value of less than A$500,000;

– where the financial product or service is provided for use in connection with a business, that business is a small business (a small business is one employing less than 20 people, or less than 100 people if the business is, or includes, the manufacture of goods);

– the client has net assets of less than A$2.5 million;

– the client has gross income for each of the last two financial years of less than A$250,000;

– the client is not a sophisticated investor meeting the required criteria; or

– the client is not a professional investor (please also see Chapter 15 below).

Regulation of related activities

Financial transaction reports

Under the Financial Transaction Reports Act 1988 (Cth), all cash dealers are required to hold certain account information and signatory information in relation to each account held by them before allowing withdrawals from the account. Cash dealers must also report to the Australian Transaction Reports and Analysis Centre (AUSTRAC):

– significant cash transactions: transactions of A$10,000 or more in Australian currency or the equivalent of A$10,000 or more in foreign currency (also covered by the Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth) [AML/CTF Act] as a “threshold transaction”); and

– suspect transactions, which is any transaction that the cash dealer has reasonable grounds to suspect may be relevant to investigation of criminal activity, including tax evasion (also covered by the AML/CTF Act).
“Cash dealers” include:

- ADIs, (that is, banks, building societies and credit unions) which are referred to as “financial institutions”;
- Australian financial services licensees who deal in securities and/or derivatives (as defined in the Corporations Act);
- persons carrying on a business of issuing, selling or redeeming travellers cheques, money orders or similar instruments;
- currency and bullion sellers;
- persons who carry on a business of operating a gambling house or casino;
- bookmakers; and
- persons carrying on the business of collecting and holding currency on behalf of others, exchanging currency and remitting or transferring currency into or out of Australia.

The Financial Transaction Reports Act 1988 (Cth) provides penalties for avoiding reporting requirements and providing false or incomplete information.

Note that, whilst still effective to regulate “cash dealers”, the AML/CTF Act applies Australia’s new and more broadly applicable anti-money laundering regime and has in effect replaced the Financial Transaction Reports Act 1988 (Cth), including by also applying to “cash dealers”.

**Anti-Money Laundering and Counter-Terrorism Financing Act 2006**

The Anti-Money Laundering and Counter-Terrorism Financing Act 2006 (Cth) (AML/CTF Act) sets out a “risk-based” legislative regime aimed at aligning Australia’s anti-money laundering and terrorist financing regulatory framework with international best practice. The AML/CTF Act is administered by AUSTRAC. AUSTRAC has set out both AML Rules and guidance notes to assist the regulated “reporting entities” to comply with their obligations.

“Reporting entities” are captured by the AML/CTF Act if they provide certain “designated services” which are set out in the AML/CTF Act and relate to banking and financial services, bullion and the gambling industry.

Reporting entities must comply with the prescriptive requirements in the AML/CTF Act, including by preparing and implementing a “risk-based” AML/CTF program with the goal of identifying, mitigating and managing the risks of money laundering and terrorism financing.
Some of the other key obligations for reporting entities under the AML/CTF Act are as follows:

- Reporting entities must report transactions of A$10,000 or more (threshold transactions) in Australian currency or the equivalent of A$10,000 or more in foreign currency or e-currency;
- Reporting entities must report international funds transfer instructions;
- Reporting entities must report suspicious transactions including any transaction which the reporting entity has reasonable grounds to suspect may be relevant to investigation of criminal activity, such as tax evasion, terrorism financing, or money-laundering or where the reporting entity has reasonable grounds to suspect that the counterparty in the transaction is not who they say they are;
- Reporting entities must engage in customer and employee identification and due diligence procedures;
- Reporting entities must maintain a record-keeping system of the provision of designated service(s) to customers; and
- Reporting entities must develop and maintain an AML/CTF compliance program, as they may be required to provide reports to AUSTRAC.

**Consumer credit**

The provision of credit to consumers for domestic, personal or household use or for residential investment property purposes, is now regulated by the Commonwealth under the National Credit Code throughout Australia. The *National Consumer Credit Protection Act 2009* (Cth) also regulates consumer credit by imposing a credit licensing regime and responsible lending obligations.

**General banking**

Designed to protect users of electronic payment facilities in Australia, the ePayments Code regulates payments including ATM, EFTPOS and credit card transactions, online payments and BPAY. Almost all banks, credit unions and building societies in Australia subscribe to the ePayments Code.

**Secured financing types of securities**

Traditionally, the principal types of security over property in Australia available to a financier included the mortgage and the company charge.

All kinds of property, both real and personal (including rights under contracts) may be the subject of a legal or equitable mortgage, or a company charge. An equitable
mortgagee will have the right to perfect its title to the secured property as legal owner on the terms of the relevant mortgage. Mortgagees, chargees and secured parties have a power of sale (together with other security rights) over the secured property that is exercisable on default.

Most real property is held under the Torrens System (see Chapter 13, “Real Property and Environmental Law” below) and a mortgage over such property is typically effected under statute by registration against the statutory title to the mortgaged property.

The **Personal Property Securities Act 2009** (Cth) (PPSA) has implemented a legal framework for security over personal property. The PPSA governs security taken over all types of personal property (excluding real property and certain other specific property) given by all types of legal entities. It adopts a functional approach by looking to the substance of a transaction, rather than the form. The central element of the PPSA is that all transactions which in substance secure payment or performance are treated as security interests, regardless of the form of the transaction and irrespective of which party has title to the property. However, certain transactions which do not secure payment or performance of an obligation are also deemed to give rise to a security interest under the PPSA, including for example assignments of receivables and certain leases or other bailments of goods.

A security interest over personal property that is subject to the PPSA may be perfected under the PPSA by registering a financing statement on the single national online register of personal property securities, or by taking possession or, for certain types of personal property, by taking control of the collateral within the meaning of the PPSA.

Failure to perfect a security interest in the manner provided under the PPSA may result in the loss of priority or the security interest becoming unenforceable in the insolvency or bankruptcy of the grantor. It is therefore critical for secured parties to consider the impact of the PPSA on their businesses and to adjust their policies and procedures to ensure that security interests are sufficiently and appropriately protected.
**Priority**

For real property mortgages, priority is determined according to the order of registration on the relevant land title.

The general principle under the PPSA is that for perfected security interests, priority is determined by time of registration of the security interest, unless the security interest is perfected by control or possession, in which case priority is determined by the time of control or possession. There are, however, certain exemptions to this general principle, including for example where a security interest is granted for the financing of the purchase of goods subject to the security interest (in which case, that security interest will generally prevail).

**Stamp duty on security**

Prior to recent changes to the NSW Duties Act effective from 1 July 2016, secured financing in Australia was subject to significant mortgage duty. If a loan was made prior to 1 July 2016 which was secured by a mortgage, charge or other security over property (which includes real estate, shares, inventory, accounts receivable and all other forms of property, including intangibles such as goodwill) situated or taken to be situated in NSW, stamp duty was payable on the security at a rate of 0.4% of the dutiable amount of the loan. The dutiable amount of the loan was calculated as the loan amount multiplied by the proportion which the value of the secured property in NSW bore to the total value of all property subject to any security for the loan (including off-shore and non-NSW property).

Foreign companies doing business in Australia should note that mortgage duty may have been payable even when the loan had no real connection with Australia. For example, a loan made to the foreign parent company outside Australia by a foreign bank may have attracted mortgage duty if shares in an Australian subsidiary incorporated in NSW formed part of the security for the loan.

Mortgage duty was abolished in NSW effective on 1 July 2016. Accordingly, there is no liability for mortgage duty in NSW (or any other jurisdiction in Australia) arising where a secured loan or further advance under an existing secured facility is made on or after 1 July 2016.

Intellectual Property
8. Intellectual Property

General

Federal legislation provides for the registration and protection of intellectual property such as trade marks, patents and industrial designs. Copyright is also protected under Federal law, without requiring registration. The registration of company and business names is available under the Corporations Act 2001 (Cth) (Corporations Act) and under Commonwealth business names legislation. There is separate legislation providing protection for original circuit layouts (that is, the representation of the three-dimensional location of the electronic components of an integrated circuit) and for unique plant varieties. Australia also has a system of geographic indicators for some Australian wines.

The law in each of these areas is complex. Specific advice should be sought if a particular name, mark, product or design is to be manufactured, marketed or used in Australia. However, a brief description of the major features of these laws is set out below.

Expenses incurred in developing or acquiring a unit of “industrial property”, being rights in a patent, copyright or registered design (but not a trade mark), may be allowable deductions for income tax purposes over the life of the unit of property. State taxes (such as stamp duty) can apply on the transfer or assignment of intellectual property.

Trade Marks

Distinctive signs used or intended to be used in relation to particular goods and/or services are readily protectable under the Trade Marks Act 1995 (Cth). “Signs” are broadly defined and include words, numbers, logos, names, colours, shapes, sounds and smells.

While trade mark registration is not mandatory, the benefits are significant. Briefly these are:

- a registered trade mark owner has the exclusive right to use its registered trade mark as a brand name for the goods or services specified in the registration;
- in enforcement (infringement) proceedings, a registered trade mark owner is in a stronger position to stop other people from using an identical or deceptively similar trade mark on the same or similar goods or services as those covered by
a trade mark registration. There is no need for the registered owner to establish a reputation in the trade mark or that use of the offending mark is likely to deceive or confuse the public;

− the rights of the registered owner extend throughout the Commonwealth of Australia, not merely to those regions in which reputation can be established;

− a trade mark registration acts as a deterrent on the public record to others who may be considering adopting the same or a similar mark;

− a trade mark registration is a readily identifiable intellectual property right that can be sold or used as security; and

− registration provides a defence to a third party’s claim of infringement if the mark is used.

Not all signs are registrable as trade marks in Australia. The basic requirements for registration are that the sign:

− is not substantially identical with, or deceptively similar to, a sign which is already being used by a third party or which is the subject of a prior registration or application in respect of similar goods or closely related services; and

− is distinctive or capable of becoming distinctive. There is no need to show that the mark has been used if the mark is sufficiently distinctive.

The registration process in Australia is relatively straightforward and where no objections or oppositions are encountered registration can be achieved in 10 to 12 months from filing.

The registered owner of a trade mark can, and in order to protect the mark should, bring an action for infringement if a person who is not an authorised user uses a sign which is substantially identical, or deceptively similar to, the trade mark in relation to goods or services in respect of which the trade mark is registered, or on similar goods or closely related services. “Well known” registered trade marks are given protection against use, even on unrelated goods and services.

Registered trade marks can be licensed or assigned and are renewable every 10 years. They can also be removed for non-use. If a mark has been registered for more than five years but has not been used during the last three years, either by the owner or an authorised user, the registration can be removed on the application of a third party.
Name protection

Under the Corporations Act, every company carrying on business in Australia is required to register its name with ASIC. Any company or individual carrying on business under a name other than its own is required to register that business name with ASIC. Businesses need to register or renew their name once with the single national register, administered by ASIC, and pay a single fee.

Business names and company names are allocated on a “first-come, first-served” basis. Registering a business or company name does not give you any proprietary rights in that name; only a trade mark registration can provide that kind of protection. The fact that a company has a well-known trading name or trade mark overseas does not, in itself, entitle it to register that name or mark as a company or business name in Australia.

The obligation to register a business name is a legal obligation which is entirely separate to any steps that business owners may take to protect any intellectual property rights in a name or brand, such as registering a trade mark.

An application for a registration of a company or business name may be made to the appropriate authority by any person. That application will not be rejected unless it is determined that:

− in the case of a business name, the name is the same as, or would be confused with, other existing company or business names registered in Australia;

− in the case of a company name, the name is identical to an existing company or registered business name; or

− the name is offensive or otherwise prohibited.

If an overseas company proposes to establish a branch or subsidiary in Australia, an application to secure the particular company or business name should be made at the earliest possible time. Although a business name cannot be registered until a branch or subsidiary has been established in Australia, a company name can be “reserved” for up to two months at a time with extensions of further two month periods at the discretion of ASIC.

A common form of name piracy, which some overseas companies have suffered, is the unauthorised registration of their trading name or trade mark as business names or as a corporate name under the Corporations Act. The use of such a
name can constitute trade mark infringement if the name is identical or similar to an earlier mark registered for similar goods or services. If the earlier mark has a reputation in Australia acquired through use, the use of the name may also amount to passing off or misleading or deceptive conduct under relevant consumer protection legislation. Court orders can be obtained requiring deregistration of the offending business or company name.

Domain names

Internet domain names within the Australian.au domain space are administered by an industry self-regulatory body, .au Domain Administration Ltd (auDA).

The .au domain space is divided into a number of second level domains (2LDs). The most popular 2LD open to the general public is com.au, which is for use by commercial entities.

The current eligibility requirements for registration of a com.au domain are set out in auDA’s Domain Name Eligibility and Allocation Policy.

Registrants must be Australian, meaning that they must be:

− an Australian-registered company or incorporated association;
− trading under a registered business name in any Australian State or Territory;
− a foreign company licensed to trade in Australia;
− an Australian partnership or sole trader; or
− the owner of, or applicant for, an Australian registered trade mark.

Domain names are allocated on a first-come, first-served basis (provided the applicant satisfies the eligibility rules). It is not possible to reserve a domain name.

Domain names must be unique within the com.au sub-domain space, be at least two characters long, contain only alpha numeric characters and hyphens, and not be included on auDA’s Reserved List, which includes names and words protected by statute.

The domain name must:

− exactly match the registrant’s registered company or business name or the words comprising the registrant’s Australian trade mark registration or application;
be an acronym or abbreviation of the registrant’s company or business name or the words comprising the registrant’s Australian trade mark registration or application; or

be otherwise closely and substantially connected to the registrant, for example because the domain name refers to a product or service which the registrant sells or provides.

There is a Dispute Resolution Policy for .au domain names which is an adaptation of ICANN’s Uniform Dispute Resolution Policy and its purpose is to provide a cheaper, more efficient alternative to litigation for the resolution of domain name disputes.

auDA also has a policy on the transfer of .au domain names known as the Transfers (Change of Registrant) Policy. The policy allows a registrant to transfer their domain name licence to another eligible entity. However, a domain name may not be registered for the sole purpose of resale.

Copyright

Owners of certain original works and other copyright subject matter (such as artistic works, sound recordings and computer programs) have various rights under the Copyright Act 1968 (Cth) (Copyright Act). There is no statutory system of registration of copyright in Australia. The owner of a copyright which has been infringed can bring an action to seek an injunction and obtain damages or an account of profits.

Australia is a party to the Trade-Related Aspects of Intellectual Property Agreement and the Berne and Universal Copyright Conventions and, as a result, works and other copyright subject matter created by the citizens of member countries or first published in the relevant member country are entitled to the same protection in Australia as if they had been created and first published in Australia. Australia has also acceded to the World Intellectual Property Organisation (WIPO) Copyright Treaty and the WIPO Performances and Phonograms Treaty.

The term of copyright was extended as a result of amendments to the Copyright Act to give effect to the US-Australia Free Trade Agreement. Copyright now generally lasts for 70 years following the death of the author, but the exact term of copyright protection differs depending on the type of work or other subject matter that is being protected.
Moral rights held by individuals in relation to literary, dramatic, musical or artistic works and cinematographic films are given protection in Australia. These rights include the right of attribution of authorship, the right not to have authorship of a work falsely attributed and the right of integrity in a work. Moral rights continue in force until copyright ceases to subsist in the work, with the exception of the right of integrity in a cinematographic film which ceases on the death of the author. Remedies for infringement of moral rights include an injunction, damages, a declaration that a moral right has been infringed and other orders.

**Patents**

Australia's *Patents Act 1990* (Cth) (Patents Act) confers upon the owners of standard patents the exclusive right to make, use, sell, hire and otherwise exploit a patented invention for a period of 20 years, in most circumstances commencing from the date of filing the patent. Australia, in line with the US and Europe, allows a patentee to apply for an extension to the term of a standard patent that claims a pharmaceutical substance by up to five years in certain circumstances.

Australia is a party to the Paris Convention for the Protection of Industrial Property, one principle of which is the right of priority. Gaining priority means that once an application has been made in a convention country, thereby securing a priority date, it is possible to claim the same priority date for a subsequent Australian application made within 12 months. Australia is also a contracting party to the Patent Co-operation Treaty, which provides for the filing of international applications. The Australian Patent Office acts as an International Searching Authority and an International Preliminary Examining Authority for international applications originating in Australia.

For an invention to be patentable, it must be a "manner of manufacture", novel, involve an "inventive step" (i.e. not be obvious when compared with the prior art base that existed before the "priority date" of the patent), and also must be useful.

There are different standards for assessing inventive step depending on the filing date of the patent.

There is a "grace period" which applies in Australia in relation to public disclosures of an invention made on or after 1 April 2002. Certain disclosures may be disregarded for the purposes of assessing novelty, inventive step and innovative step if a complete patent application is filed (and protection subsequently obtained) within a period of 12 months of the disclosure.
Innovation patents

An innovation patent, which is for a term of eight years, is an alternative form of protection to that given by a standard patent. The purpose of the innovation patent system is to ensure easy and inexpensive short-term protection for lower-level or incremental inventions (innovations). To obtain an innovation patent, the invention must be novel and involve an innovative step, which is a lower threshold than that required for standard patents. The innovation patent system facilitates the grant of patents without substantive examination.

Generally an innovation patent is granted after it passes a formalities check, usually within a month. No opposition proceedings are permitted at this stage. Substantive examination only occurs if required by the Commissioner or specifically requested by the patentee or a third party. Once an innovation patent has been examined and certified it can be opposed. An innovation patent will only be legally enforceable if the innovation patent has been examined and certified by IP Australia.

Registered designs

Design registration is used to protect the visual appearance of manufactured products. Design features of products, such as shape, configuration, pattern or ornamentation may be protected from imitation by registration of those features as “designs” under the Designs Act 2003 (Cth) (Designs Act). This Act confers upon the registered owner of a design the right to use, and authorise others to use, the design. Once the registered design is examined and certified, the owner may sue for infringement if the registered design is used without permission.

To be valid, a design registration must be for a design which is new and distinctive. Prior use in Australia or publication (within or outside Australia) will mean that a design is not new or distinctive.

The term of registration of a design is five years with the right to renew the registration for a further five years.

As the Copyright Act protects artistic works, a design might fall within the definition of “design” in the Designs Act and also be an “artistic work” within the meaning of the Copyright Act. Where an artistic work is industrially applied as a design and articles made using this three dimensional design are put on the market in Australia, copyright protection may not be available. However, if the design is registered it will be protected under the Designs Act.
Under the Trade Marks Act, there is some overlap between trade mark and design legislation. It is now possible to register shapes as trade marks. Traders may potentially register their product as both a design and a trade mark and obtain protection under both regimes.

Under the Paris Convention, an applicant for a design application in a member country has a period of six months within which to file a corresponding design application in Australia, in which case the Australian application has the priority date of the overseas application.

**Confidential information/trade secrets**

Trade secrets are part of the broader concept of confidential information which is protected by the courts. The term “trade secrets” refers broadly to information which is of commercial value to the holder of the information and is known only by the holder or others to whom the holder has disclosed the information subject to an obligation of confidentiality. Customer lists, marketing techniques, software, know-how, product specifications and manufacturing processes can all be trade secrets.

Although the Copyright Act may protect the particular form in which information is embodied, and the Patents Act may protect the subject matter of information (which discloses a patentable invention the subject of a patent registration), there is no Federal or State legislation which protects secret information, as such. It is generally accepted in Australia that as trade secrets are simply information, property rights do not attach to them.

Trade secrets are protected either by express contractual obligations to maintain the secrecy of confidential information or by application of the general principle that anyone to whom confidential information is communicated in circumstances of confidence has an obligation of good faith to maintain the confidentiality of the information.

It is common to impose express obligations of confidentiality in employment, licensing and sale contracts. As protection for trade secrets is lost once the information is no longer secret, a contractual obligation which outlives the secrecy of the information or which otherwise relates to information which is not confidential, may be unenforceable or at least ineligible for relief in the event of a breach.
Injunctions can be obtained to restrain the disclosure of trade secrets. If the secret has already been disclosed, damages are available to compensate for the loss suffered as a result of unauthorised use or disclosure, or alternatively an account of profits made as a result of the use or disclosure.

**Exploitation of intellectual property rights**

Intellectual property rights are the most important assets of many businesses and are bought and sold, licensed and the subject of joint ventures and other collaborations. Central to any intellectual property transaction is a clear understanding of ownership and limits on usage of such property. Issues such as ownership of rights generated by the activities of employees, contractors or collaborators need to be addressed before many transactions proceed and are part and parcel of the due diligence process. Similarly, extensive searching often needs to be undertaken, and enquiries often need to be made, in order to establish clear title to rights.

The ownership position in Australia will not necessarily correspond to that in the United States, the United Kingdom or elsewhere. In Australia, where a copyright work is made by an employee pursuant to the terms of a contract of employment, the copyright will usually be owned by the employer. Contractors or consultants will usually own the intellectual property rights in their own work in the absence of an assignment of those rights. Special rules apply to photographs, portraits or engravings commissioned for a private or domestic purpose.

There is also a need to seek separate Australian advice on the form of assignments and licences including:

− whether a licensee has any specific rights under the relevant Australian legislation, such as the rights of an authorised user under section 26 of the Trade Marks Act (which include the right to bring an action for infringement) or the right of an exclusive licensee to commence infringement proceedings under section 120(1) of the Patents Act;

− whether there are any anti-trust or competition law concerns arising out of the terms of the transaction;

− whether there are any income tax, capital gains tax, stamp duty, GST or transfer pricing issues arising out of the transaction;

− the rights of the parties in relation to or following any termination of a licence; or
whether or not any statutory warranties or conditions are implied or imposed by law in connection with the transaction, and the extent to which liability can be limited for breach of any such warranties or conditions.

Franchising

Franchising in Australia has been regulated since 1998 by the Franchising Code of Conduct (Code), a mandatory industry code of conduct under the *Competition and Consumer Act 2010* (Cth) (CCA). All business arrangements that fall within the scope of a “franchise agreement” must comply with the Code. This term is defined broadly and includes traditional business format franchises as well as certain distribution arrangements and other commercial relationships not ordinarily considered to be “franchises”.

The Code requires, among other things, disclosure of certain information regarding the business and a cooling-off period providing the franchisee with the right to terminate within seven days of entering into the agreement. The Code also prohibits franchise agreements from containing release from liability provisions, provides for transfers and terminations of franchise agreements and requires compliance with prescribed dispute resolution provisions.

Non-compliance with the Code may result in the imposition of injunctions, damages, undertakings, corrective advertising or other such orders as a Court thinks appropriate. In addition, breaches of certain provisions carry civil penalties of up to A$54,000. Parties who are only indirectly involved in a breach of the Code may also be found liable for breach. This includes any party that aids, abets, counsels, induces or is in any way knowingly concerned in or a party to the contravention. Under the Code, both franchisees and the Australian Competition and Consumer Commission (ACCC) may take action against a franchisor for a breach of the Code.

Enforcement of rights

Intellectual property rights are usually enforced by way of a civil action in the Federal Court of Australia, Federal Circuit Court or the Supreme Court of the relevant State or Territory. In addition to final relief granted after a full trial, in certain circumstances it may be possible to obtain:

- an interlocutory injunction to prevent further infringing activities until trial;
- a summary judgement disposing of the proceedings without the need for a trial;
− a delivery up order, forfeiting infringing goods;
− an “Anton Piller” or Search Order for the inspection and preservation of documents and articles pending trial;
− a “Mareva injunction” or Freezing Order to prevent the infringer disposing of assets or absconding from the jurisdiction; or
− a “Norwich Pharmacal” order for disclosure of the identity of infringers.

**Interlocutory injunctions**

A non-Australian rights holder may not need to travel to Australia to obtain an interlocutory injunction (an injunction before trial). Supporting evidence may be put before an Australian Court in the form of an affidavit (sworn statement) for claimants who reside outside the jurisdiction.

Delay or acquiescence by the applicant can operate to deny the grant of an interlocutory injunction.

In order to obtain an interlocutory injunction the applicant must be able to show:

− that there is a serious question to be tried (that is, the case has some prospects of succeeding); and
− that the balance of convenience favours the granting of an injunction. This will include whether the applicant will suffer irreparable injury for which damages would be an inadequate remedy.

The plaintiff will usually only be granted an interlocutory injunction on an undertaking to pay damages, which may be ordered to be paid by the Court in the event that the plaintiff is unsuccessful at trial. On the other hand, if an interlocutory injunction is denied, the defendant may be ordered to keep accounts of its dealings in the relevant goods.

**Summary judgement**

The Federal Court has a procedure whereby an applicant which can show that the defence of the respondent does not provide an answer to the applicant’s claim can obtain a judgement without having to proceed to a full trial. Case law has confirmed that this rule can be applied in intellectual property cases, even where the issues raised are potentially complex ones. The procedure can be applied in relation to part only of the applicant’s claim, if the judgement would have the effect of resolving the controversies between the parties.
Anton Piller orders

A Search Order or “Anton Piller” order is a particularly potent option in that it not only prevents a respondent from destroying evidence, but it assists in tracking the source from which the infringement arises. This order is made without notice to the infringer and allows the applicant’s solicitors to search for and remove any infringing goods or means of producing them, together with any other evidence of infringement such as invoices, orders, correspondence and receipts. A respondent can also be ordered to disclose names and addresses of suppliers, answer questions on oath and give details as to the destination of goods sold.

In order to obtain a Search Order, the applicant must show:

− a strong prima facie case;
− that loss or damage, actual or potential, will be very serious; and
− that the infringer has incriminating documents or things and is likely to destroy that evidence.

An independent solicitor must be present at the execution of the orders.

Costs and settlement

The costs of bringing an infringement action to an interlocutory or final hearing can be high. Costs include court fees, legal fees, costs of expert witnesses and costs of any independent solicitors. Costs may be awarded to a successful party, along with damages or an account of profits, but will usually only amount to approximately half of the actual costs of litigation.

Urgent applications for an interlocutory hearing may be brought within two weeks. It may take one or two years to reach a final hearing, although this period is likely to be reduced if an interlocutory injunction is in place.

Where settlement is reached prior to a final determination (as is usually the case), the infringer can be required to submit to orders or give undertakings to the Court. Serious consequences would flow from subsequent infringing activities, as a breach of the undertakings would constitute contempt of court punishable by imprisonment or sequestration.
Revocation proceedings

Application can be made to revoke a patent, design or trade mark. Such applications can be made by counterclaim in infringement proceedings.

Border seizures

Both copyright and trade mark legislation provide for intellectual property owners to object to the importation into Australia of infringing goods. This is done by way of written notice to the Australian Border Force (the front-line operational agency within the Department of Immigration and Border Protection). The intellectual property owner therefore has a chance to have counterfeit goods seized before they are distributed.

The Copyright Act and Trade Marks Act have restricted application in preventing “grey” or “parallel” imports, that is, genuine manufactured goods not intended for the Australian market. Parallel importation of legitimate sound recordings is permitted, regardless of whether the sound recordings are accompanied by other copyright material. Parallel imports of software (including computer games) have been lawful since April 2003. It is not possible to block parallel imports on the basis of copyright in accessory items. However, parallel imports will only be permitted in certain circumstances, for example the imported work may need to have been published in a country that is party to the Berne Convention or a member of the World Trade Organisation.

Other causes of action

Intellectual property owners may also be able to access other rights, including those:

- at common law, for example an action for “passing off”, where one party takes advantage of the goodwill or reputation built up by another, by misrepresenting that some relationship exists between the parties or their respective goods or services; and

- under the Australian Consumer Law (set out in Schedule 2 of the CCA), which prohibits persons from engaging in misleading or deceptive conduct in the course of trade or commerce.
9. Privacy

Overview of Australian Privacy Laws

Australian privacy law is primarily regulated by the Privacy Act 1988 (Cth) (Privacy Act). The Privacy Act sets out the obligations for handling of personal information by Commonwealth agencies and corporate entities. State based legislation, similar to the Privacy Act, also applies to the handling of personal information by State government entities. Specific additional legislation also applies for:

- surveillance (at both State and Federal levels);
- email and telemarketing (through the Spam Act 2003 (Cth) and Do Not Call Register Act 2006 (Cth)); and
- the management of health records (in Victoria, New South Wales and the ACT).

An entity’s obligations under the Privacy Act are set out in the Australian Privacy Principles (APPs). Penalties of up to A$360,000 for individuals and A$1.8 million for corporations may apply for repeated and serious privacy breaches.

Further amendments are proposed to the Privacy Act to account for mandatory notification of data breaches, which are expected to be passed by 2017.

Extra-territorial application

The Privacy Act has extra-territorial application in certain circumstances, including where:

- the organisation collecting or handling the personal information has an "Australian link" e.g. is incorporated in Australia, or
- the collection or handling of personal information has an "Australian link" i.e. where a foreign organisation carries on business in Australia, and collects or handles an Australian resident’s personal information in Australia.

Note that the Privacy Act does not distinguish between “data controllers” and “data processors” (the EU applies this distinction). The requirements of the Privacy Act apply equally to all organisations who fall within its remit, whether they control the purposes for which personal information is collected or held, or only process it for a third party.
If an Australian subsidiary collects or handles personal information about Australian residents, it will be subject to the Privacy Act even if that personal information is collected or held off-shore.

If an entity operating outside Australia collects or handles personal information about Australian residents, it may also be subject to the Privacy Act:

− On a strict reading of the legislation, the Privacy Act should not apply to a foreign entity operating outside Australia if all the personal information it collects is sent by customers for example, directly to the USA via the internet and cannot be said to be collected or handled in Australia.

− However, guidelines from the Australian privacy regulator (the Office of the Australian Information Commissioner, or “OAIC”) interpret the legislation broadly, suggesting that information is collected ‘in Australia’, if it is collected from an individual who is physically present in Australia or an external Territory, regardless of where the collecting entity is located or incorporated. An example is the collection of personal information from an individual who is physically located in Australia or an external Territory, via a website that is hosted outside Australia. This applies even if the website is owned by a company that is located outside of Australia or that is not incorporated in Australia.

Following the OAIC guidelines reasoning, a foreign entity operating outside Australia could be subject to the Privacy Act even if the information is not collected or handled in Australia.

**Application of the APPs**

The APPs apply (with limited exceptions) to all organisations and government agencies (APP entities) who collect and handle personal information in Australia or relating to Australian individuals.

“Personal information” covers information or an opinion about an identified individual, or an individual who is reasonably identifiable:

− whether the information or opinion is true or not; and

− whether the information or opinion is recorded in a material form or not.

The APPs apply irrespective of whether the personal information collected or handled relates to a current, past or prospective customer of an entity or another individual (although see section below on employee records).
Employee records exemption

“Employee records” are exempt from the requirements of the APPs.

An employee record, in relation to an employee, means a record of personal information relating to the employment of the employee. Examples of personal information relating to the employment of the employee are health information about the employee and personal information about other employee related matters as set out in the Privacy Act.

Personal information relating to an employee which does not fall within the definition of an “employee record” will be subject to Australian privacy laws including the APPs. In particular, the following types of information do not constitute employee records:

− any personal information concerning contractors, company officers or job applicants; and
− the contents of any personal emails (which may, for example, be collected via any surveillance of IT systems or devices used by employees).

Important note: employee records and other information may be subject to other requirements under local employment laws and/or an employee’s contract of employment (e.g. confidentiality obligations).

APP summary

There are 13 APPs in total which form the basis of Australia’s privacy law framework. These are set out below:

<table>
<thead>
<tr>
<th>NUMBER</th>
<th>NAME</th>
<th>SUMMARY OF REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>APP 1</td>
<td>Open and transparent management of personal information</td>
<td>In dealing with personal information, an entity is required to:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>− take reasonable steps to implement practices, procedures and systems that will ensure it complies with the APPs generally; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>− have a clear and up-to-date policy about the management of personal information (a privacy policy) containing information about:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>» the kinds of personal information it collects;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>» how it collects and holds personal information;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>» the purposes for which it collects, holds, uses or discloses personal information;</td>
</tr>

</tr>
<tr>
<td></td>
<td></td>
<td>» how an individual may complain about the breach of an APP and how the organisation will deal with such a complaint; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>» whether the organisation is likely to disclose personal information to overseas recipients and if so, the countries in which such recipients are likely to be located, if it is practicable to specify those countries.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The policy must be made available free of charge and in an appropriate format e.g. online, in mailings, through links in emails etc.</td>
</tr>
<tr>
<td>APP 2</td>
<td>Anonymity and pseudonymity</td>
<td>Individuals must have the option of dealing with an entity anonymously or using a pseudonym unless:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– an entity is required or authorised by law to deal with individuals who have identified themselves; or</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– it is impracticable for an entity to deal with individuals who have not identified themselves.</td>
</tr>
<tr>
<td>APP 3</td>
<td>Collection of solicited personal information</td>
<td>An entity must not collect personal information unless the information is reasonably necessary for its functions or activities.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In addition, as a general rule, an entity must not collect sensitive information about an individual unless the individual consents to the collection.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>“Sensitive information”, which is a sub-set of personal information, includes information relating to race or ethnicity, political opinion, membership of trade associations, religious beliefs, sexual preferences and health.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In all cases, the information must be collected from the individual to which the information relates, unless it is unreasonable or impractical to do so.</td>
</tr>
<tr>
<td>NUMBER</td>

</tr>
<tr>
<td>--------</td>
<td>------</td>
<td>-------------------------</td>
</tr>
<tr>
<td>APP 4</td>
<td>Dealing with unsolicited personal information</td>
<td>Where an entity receives personal information which it did not solicit, an entity must determine whether or not it could have collected the information under APP 3. If not, it must, as soon as practicable but only if it is lawful and reasonable, destroy the information or de-identify it. If an entity keeps the information then it must comply with the APPs in the handling of that information.</td>
</tr>
</tbody>
</table>
| APP 5  | Notification of collection of personal information | An entity must notify individuals from whom it is collecting personal information of the following matters (before collection if possible, or as soon as practicable after). It might be possible to do this by providing them with a copy of an entity's Privacy Policy depending on the circumstances and what information is being collected:  
- an entity's full name and contact details;  
- the fact that an entity collects, or has collected, personal information about the individual from a third party (if applicable) and the circumstances of that collection;  
- the fact that the collection of personal information is required or authorised under law or a court/tribunal order if applicable (including name of law, or details of court/tribunal order, that requires or authorises the collection);  
- the purposes of collecting the personal information;  
- the main consequences (if any) for the individual if all or some of the personal information is not collected by an entity;  
- any other entities to which an entity usually discloses personal information of the kind collected; |
<table>
<thead>
<tr>
<th>NUMBER</th>
<th>NAME</th>
<th>SUMMARY OF REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>– that an entity’s privacy policy contains information about how the individual may access and correct their personal information;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– that the privacy policy contains information about how the individual may complain about a breach of the APPs, and how an entity will deal with such a complaint; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– whether an entity is likely to disclose the personal information to overseas recipients, and if so, the relevant countries, if it is practicable to specify those.</td>
</tr>
<tr>
<td>APP 6</td>
<td>Use and disclosure of personal information</td>
<td>If an entity holds personal information about an individual that was collected for a particular purpose (the “primary purpose”), an entity must not use or disclose it for another purpose (the “secondary purpose”) unless:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– the individual has consented to the use or disclosure; or</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– the use or disclosure of the information is in circumstances where there is a reasonable expectation of use for the secondary purpose or use is required by law or an enforcement body.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If the personal information consists of sensitive information, the secondary purpose must directly relate to the primary purpose.</td>
</tr>
<tr>
<td>APP 7</td>
<td>Direct marketing</td>
<td>An entity must not use or disclose personal non-sensitive information for the purpose of direct marketing unless:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– an entity collected the information from the individual; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– the individual would reasonably expect an entity to use or disclose the information for direct marketing; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– an entity makes it easy for the individual to request not to receive direct marketing communications and the individual has not made such a request to an entity.</td>
</tr>
</tbody>
</table>
An entity can use personal non-sensitive information collected from an individual who would not reasonably expect an entity to use the information for direct marketing, or from someone other than the individual, for direct marketing if:

− the individual consents to the use of the information for that purpose; or

− it is impracticable to obtain consent and further:
  
  » an entity makes provision for the individual to easily request not to receive the direct marketing communication; and
  
  » each direct marketing communication includes a prominent statement that the individual may make a request not to receive the direct marketing communication; and
  
  » the individual has not made such a request.

If an entity wishes to use or disclose sensitive information about an individual for the purpose of direct marketing, it must have express consent.

Note the above does not apply to direct marketing by email, SMS, MMS or other instant messages. The Spam Act 2003 (Cth) sets out the obligations which need to be complied with in relation to electronic commercial messages.

### Cross-border disclosure of personal information

Before disclosing personal information about an individual to an overseas recipient, an entity must take reasonable steps to ensure the overseas recipient does not breach the APPs in relation to the information. Further, subject to limited exceptions, an entity will remain liable for any breaches of the APPs by the overseas recipient regardless of contractual arrangements to the contrary.
<table>
<thead>

</table>
Competition and Unfair Commercial Practices Laws
10. Competition and Unfair Commercial Practices Laws

General

There is legislation at both Federal and State levels that prohibits anti-competitive conduct and provides protection for businesses and consumers from unfair practices in their dealings, in trade and commerce, with corporations and other persons.

The legislation is complex and wide-ranging. An overseas company proposing to manufacture or distribute goods or enter into transactions with other companies or consumers in Australia should first seek specific advice as to how this legislative regime may affect its operations.

The main statute dealing with competition or antitrust law is the *Competition and Consumer Act 2010* (Cth) (CCA). The Australian Consumer Law (ACL), which is Schedule 2 to the Competition and Consumer Act, is the main legislation regulating consumer protection and unfair commercial practices.

Administration and enforcement

The CCA is administered and enforced by the Australian Competition and Consumer Commission (ACCC), an independent statutory authority. The ACCC, as well as ASIC (for financial goods and services) and the State and Territory fair trading authorities, also administer and enforce the ACL. The ACCC’s main goals are to promote competition and fair trading, and to protect consumers in their dealings with business.

The ACCC has extensive powers to investigate potential contraventions of the CCA and ACL, including powers to require persons to furnish information, produce documents and attend for examination. The ACCC also has the power to obtain search warrants to conduct “dawn raids” and, for serious cartel matters, seek warrants for the use of surveillance and interception devices.

If the ACCC believes that there has been a contravention of the CCA or the ACL then it can bring proceedings in the Federal Court of Australia seeking penalties and other remedies against the primary contravener and other persons involved in the contravention. The ACCC also has the option of administratively resolving
potential contraventions, including through the acceptance of court enforceable undertakings and for certain ACL contraventions the issue of infringement notices. The ACCC encourages compliance with the law by educating and informing consumers and businesses about their rights and responsibilities under the CCA and ACL. It also works with other Federal and State agencies seeking to coordinate approaches to enforcement and education.

The ACCC has responsibilities in relation to the granting of certain authorisations and notifications under which immunity can be granted for certain conduct that would otherwise breach the prohibitions on anti-competitive conduct in the CCA, provided the benefit to the public outweighs the anti-competitive detriment.

The Director of Public Prosecutions has responsibility for prosecuting criminal offences under the CCA and ACL.

**Anti-competitive arrangements**

The CCA prohibits contracts, arrangements or understandings that have the purpose, effect or likely effect of substantially lessening competition in a market. The expression “arrangements or understandings” is interpreted broadly by the courts. There is no requirement that an arrangement be in writing or enforceable at law. All that is required is a “meeting of minds” between the parties.

**Cartel conduct**

Since July 2009, cartel conduct has been criminalised in Australia. There are now parallel criminal offences and civil penalty provisions for making or giving effect to a contract, arrangement or understanding that contains a “cartel provision”. A cartel provision is a provision between two or more competitors that has the:

- purpose, effect or likely effect of fixing, controlling or maintaining prices;
- purpose of directly or indirectly preventing, restricting or limiting production, capacity or supply between the parties;
- purpose of allocating customers, suppliers or territories between the parties; and/or
- purpose of rigging bids or tenders.

There are various exceptions, exemptions and defences to the cartel prohibitions, including for joint ventures, notified conduct, collective acquisitions and certain “vertical” arrangements including exclusive dealing.
Immunity policy

The ACCC has an *Immunity Policy for Cartel Conduct* (Immunity Policy). Under this policy, immunity from ACCC prosecution is available to the first member of a cartel to apply for immunity provided that, at the time of application, the ACCC has not received written legal advice that it has sufficient evidence to commence proceedings. Immunity is also subject to compliance with certain other conditions, including that the applicant has not coerced others to participate, that they provide full, frank and truthful disclosure and that they fully and expeditiously cooperate with the ACCC.

For criminal contraventions, Annexure B to the Prosecutions Policy of the Commonwealth deals specifically with immunity from prosecution in serious cartel offences. This is essentially in the same terms as the ACCC’s Immunity Policy.

The ACCC is responsible for granting immunity from civil enforcement proceedings, and the Commonwealth Director of Public Prosecutions (CDPP) is responsible for granting immunity from criminal proceedings (although the ACCC recommends to the CDPP whether immunity should be granted). As a matter of practice, applicants will need to apply for both civil and criminal leniency at the same time.

Exclusionary provisions

Exclusionary provisions (or “collective boycotts”) are contracts, arrangements or understandings between competitors which have the purpose of preventing, restricting or limiting the supply of goods or services to a particular person or group, or have the purpose of preventing, restricting or limiting the acquisition of goods or services from a particular person or group. It is sufficient that at least two of the parties to the contract, arrangement or understanding are competitive with each other in relation to the goods or services that are the subject of the restriction, not necessarily all of them. Further, it is not necessary that the party who has dealings with the target of the boycott be one of the competitors. Exclusionary provisions (other than secondary boycotts) are prohibited outright by the CCA, regardless of their impact on competition.

There are defences to the prohibition on exclusionary provisions for joint ventures and exceptions for certain “vertical” arrangements, notably exclusive dealing.
Secondary boycotts

The CCA prohibits two persons acting in concert from hindering or preventing a third person trading with a fourth person (the Target) where the purpose or likely effect of the conduct is to cause a substantial lessening of competition in any market in which the Target is involved. Trade unions engaging in boycotts are specifically addressed in Part IV of the CCA.

Resale price maintenance

Suppliers of goods or services in Australia are prohibited from specifying a minimum resale price, and may not withhold supply on the basis that the reseller has refused to comply with a specified minimum resale price.

Resale price maintenance is per se unlawful - that is, it is not necessary to establish that it has the purpose or effect of substantially lessening competition. It is, however, permissible for a supplier to specify a maximum price for resale, so long as this does not amount to a de facto actual price at which the reseller must sell. It is also permissible for a supplier to issue a recommended resale price provided that the price is a recommendation only and there is no obligation to comply.

The ACCC can authorise conduct that would otherwise breach this provision of the Act. In order to grant authorisation, the ACCC must be satisfied that the public benefit of the conduct outweighs any competitive deterrent.

Misuse of market power

The CCA prohibits corporations with "a substantial degree of power in a market" from "taking advantage" of that power in that or any other market for the purpose of eliminating or substantially damaging a competitor, preventing market entry, or deterring or preventing a person from engaging in competitive conduct in that or any other market (Prohibited Purposes).

Establishing one of the Prohibited Purposes is a fundamental element of determining whether or not a corporation has misused its market power. The Prohibited Purpose need not be the only motivating purpose to constitute a breach. It is sufficient if it is a substantial or operative purpose behind the conduct, despite the existence of other valid and lawful purposes or reasons. In the absence of subjective evidence, the courts may infer the corporation's purpose from its conduct and from the relevant surrounding circumstances.
There is no specified market share threshold that establishes market power. Market power is generally understood as the ability to act free from the constraints of competition, particularly in relation to price. However, absolute freedom from competitive constraints is not required.

**Predatory pricing**

In addition to the general misuse of market power prohibition, there is also a specific prohibition on predatory pricing by corporations with a substantial share of a market. Under this prohibition, a corporation that has a “substantial share of a market” must not supply, or offer to supply, goods or services for a “sustained period” at a price that is “less than the relevant cost” of supplying the goods or services for the purpose of:

- eliminating or substantially damaging a competitor in a market;
- preventing the entry of a person into a market; or
- deterring or preventing a person from engaging in competitive conduct in a market.

The predatory pricing prohibition does not require evidence of intended recoupment of losses for a contravention to be established. A corporation may contravene the prohibition even if it cannot, and may not ever, be able to recoup losses incurred in supplying the goods or services.

**Price signalling**

The CCA includes two provisions prohibiting the anti-competitive disclosure of pricing and other information:

- a per se prohibition against the private disclosure of pricing information between actual or potential competitors which are not made in the ordinary course of business; and
- a prohibition against the non-private disclosure of pricing or other information if the disclosure is made for the purpose of substantially lessening competition.

These prohibitions apply only to those classes of goods or services prescribed by regulation. As at March 2016, the prohibitions only apply to the banking sector.
Exclusive dealing (other than third line forcing)

Exclusive dealing occurs where a corporation supplies or offers to supply goods or services (including at a particular price or with a discount or rebate) to a reseller on the condition that it accepts some restriction on its ability to deal with those goods or services or on its freedom to supply or acquire goods or services from third parties. Exclusive dealing also occurs where a corporation acquires goods or services (including at a particular price or with a discount or rebate) on the condition that the supplier accepts some restriction as to who else it supplies. Examples of exclusive dealing include:

- a restriction on the reseller acquiring competing products;
- a restriction on the reseller supplying the goods or services to particular customers or in particular places; and
- a restriction on the supplier selling to other resellers.

Refusal to supply or acquire on the grounds that the other party has not agreed to accept such conditions also constitutes exclusive dealing.

Exclusive dealing (other than third line forcing) is prohibited only if it has the purpose, effect or likely effect of substantially lessening competition in a relevant market.

Third line forcing

Third line forcing is a specific type of exclusive dealing under the CCA that is prohibited per se.

Third line forcing occurs when a corporation supplies goods or services (including at a particular price or with a discount or rebate) on the condition that the purchaser acquires other goods or services directly or indirectly from a third party or refuses to supply for the reason that the purchaser has not acquired or agreed to acquire goods or services from a third party.

An exemption from the prohibition applies if the conduct involves related companies. It is also possible to obtain statutory immunity for third line forcing conduct by lodging a notification with the ACCC provided the public benefits of the conduct outweigh any anti-competitive detriments.
Mergers and acquisitions

The CCA prohibits the acquisition of shares or assets if that acquisition would have the effect or likely effect of substantially lessening competition in any market for goods or services in Australia.

Notification of a proposed merger to the ACCC is a voluntary process and as a result there are no penalties for failing to notify a transaction to the ACCC. However, if the parties do not notify a transaction, the ACCC can always initiate its own review both pre- and post-completion and, if it considers appropriate, take court proceedings to intervene in the transaction. The ACCC’s Merger Guidelines indicate that the ACCC will want to examine a merger where:

- the products of the merger parties are either substitutes or complements; and
- the merged firm will have a post-merger market share of greater than 20% in the relevant market/s.

If the ACCC takes action and a transaction is found to be in breach of the CCA, pecuniary penalties may be imposed. The ACCC can apply to the court for injunctions to prevent anti-competitive mergers taking place and for divestiture orders if an anti-competitive merger has completed. Private parties cannot obtain injunctions to prevent an anti-competitive merger from taking place but can seek damages and other remedies for any loss or damage sustained as a result of the merger, as well as divestiture orders.

The CCA requires a non-exhaustive list of merger factors to be taken into account in assessing whether a merger would be likely to substantially lessens competition in a market. These include:

- the actual and potential level of competition in the market;
- the height of barriers to entry to the market;
- the level of concentration in the market;
- the degree of countervailing power in the market;
- the likelihood that the acquisition would result in the acquirer being able to significantly and sustainably increase prices or profit margins;
- the extent to which substitutes are or are likely to be available in the market;
- the characteristics of the market, including growth, innovation and product differentiation;
– the likelihood that the acquisition would result in the removal from the market of a vigorous and effective competitor; and
– the nature and extent of vertical integration in the market.

The CCA also prohibits certain acquisitions which occur outside Australia that have anti-competitive effects within Australia.

There are three types of voluntary notification to the ACCC of a proposed merger - informal clearance, formal clearance and authorisation.

**Informal clearance**
Informal merger clearance is by far the most common option and is encouraged by the ACCC. Under this process, the ACCC can provide a statement to the effect that it “does not propose to intervene” in a proposed merger. The ACCC’s *Merger Review Process Guidelines* provide guidance on ACCC processes for informal merger reviews.

**Formal clearance**
An application can be made to the ACCC for formal clearance and if granted, this provides the merger parties with legal protection from court action. However, while the formal merger clearance process was introduced in 2007, it has never been used.

**Authorisation**
Under the CCA, the Australian Competition Tribunal has the power to authorise a merger if it is satisfied that the merger would result in such a benefit to the public that it should be allowed to take place. The authorisation process is time consuming and public, and is not commonly used in practice. It only tends to be used where there are competition concerns with a proposed merger, such as where the ACCC has opposed an acquisition following an informal merger review.

**Exceptions**
The CCA provides a number of exceptions to certain (but not all) of the prohibitions in the CCA against cartel and other anti-competitive conduct. These include:

– a contract of employment insofar as the contract relates to the remuneration, conditions of employment, hours of work or working conditions of employees;
– restraint of trade clauses for employees or independent contractors;
a provision in a contract for the sale of a business or shares that is solely for the protection of the purchaser in respect of the goodwill of the business; and

certain aspects of intellectual property licences.

Authorisations and notifications

In certain cases, a corporation may apply to the ACCC for an authorisation on proposed conduct which would otherwise breach certain prohibitions against anti-competitive conduct in the CCA. The ACCC may grant authorisation and thereby immunity for the conduct where the benefit to the public outweighs the anti-competitive detriment.

In addition, immunity may be obtained through an ACCC notification process for exclusive dealing conduct, as well as certain forms of collective bargaining conduct.

Immunity is not available for conduct involving the misuse of market power.

Detection and investigation

The ACCC uses a range of detection and investigation tools and methods to enforce the CCA. These include:

requesting information voluntarily from parties who might have relevant information about a possible contravention of the CCA;

statutory notices requiring the production of documents and information, or for persons to attend for examination, under section 155 of the CCA. Failure to comply with a section 155 notice is an offence;

the power to enter premises to search for and seize evidence pursuant to a search warrant issued by a Magistrate; and

surveillance and telecommunications interception powers in relation to serious cartel conduct.

Co-operation policy

In addition to the Immunity Policy, the ACCC also has a co-operation policy for enforcement matters that applies to alleged contraventions of the CCA and ACL. There are incentives provided for co-operation, such as joint submissions to the Court in relation to penalty, pre-litigation settlements or complete or partial immunity from action by the ACCC. Each case is assessed according to its own facts and circumstances and the requirements set out in the policy. These include
providing evidence of a contravention of which the ACCC is otherwise not aware or has insufficient evidence to commence proceedings, fully co-operating with any investigation and making full and frank disclosure.

In determining the appropriate penalty, the ACCC will take into account the value and level of co-operation as well as the nature and seriousness of the conduct. However, notwithstanding any agreement on penalty between the ACCC and the contravening party, it is the role and responsibility of the Federal Court to determine the appropriate penalty that should be ordered and the ACCC and private parties can only make a recommendation as to the appropriate penalty.

The Co-operation Policy does not provide any protection against private actions.

**Liability and penalties**

The ACCC has become increasingly vigilant (and successful) in enforcing the laws against anti-competitive conduct.

A breach of the civil prohibitions against anti-competitive conduct in the CCA may lead to the following maximum penalties per breach:

- for corporations, other than in relation to secondary boycotts, up to A$10 million per breach or three times the value of the benefit received from the anti-competitive conduct or, if the value of the benefit cannot be determined, 10% of annual group turnover in the preceding 12 months;
- in the case of secondary boycotts up to A$750,000; and
- for individuals, up to A$500,000.

Serious cartel conduct can be referred by the ACCC to the Commonwealth Director of Public Prosecutions (CDPP) for criminal prosecution.

The maximum criminal penalties for criminal cartel offences for individuals are imprisonment for a term of 10 years and/or a fine of 2,000 penalty units (currently A$360,000). The maximum criminal penalties for corporations are the same as the penalties for a breach of the civil prohibitions listed above.

A corporation (including its related bodies corporate) is prohibited from indemnifying its directors, officers or employees against any liability to pay a pecuniary penalty and for any legal costs incurred in defending or resisting proceedings in which the individual is found liable to pay a pecuniary penalty.
The ACCC can also seek a range of other remedial orders including injunctions, declarations, compensatory orders and orders disqualifying a person who has contravened or has been involved in a contravention of the CCA from managing corporations.

Private actions (including class actions) may be brought against corporations and individuals who have contravened the CCA seeking damages, other compensation, injunctions and other remedial orders.

**Extraterritorial application**

The prohibitions against anti-competitive conduct in the CCA apply to conduct engaged in outside Australia by a company incorporated or “carrying on business” in Australia, or by an Australian entity or person ordinarily resident within Australia. If the anti-competitive conduct involves exclusive dealing or resale price maintenance, a less strict territorial nexus applies: those prohibitions apply to any person outside Australia provided that the person supplies the goods or services to persons within Australia.

**Access regimes**

Part IIIA of the CCA establishes a legal regime to facilitate third party access to services of certain facilities that are considered critical to competition in related markets.

Part IIIA, known as the National Access Regime, sets out a number of mechanisms by which access can be obtained to essential facilities including:

- declaration and arbitration;
- access undertakings; and
- certification of effective State-access regimes.

The matters that must be established before any service is “declared” are complex, and require consideration of factors which include:

- whether it would be uneconomical for anyone to develop another facility to provide the service;
- whether the facility or service is of national significance having regard to its size and/or its importance to interstate or international trade; and
- whether access would promote a material increase in competition in at least one other market, and would not be contrary to the public interest.
Part IIIA is not limited to any particular set of industries. The types of services that may be covered by Part IIIA are typically provided by facilities such as railway tracks, airport facilities and sewage pipelines.

There is a separate access regime for telecommunications set out in Part XIC of the CCA. This complements the regime for regulating anti-competitive conduct in the telecommunications industry which is set out in Part XIB of the Act. Part XIB gives the ACCC additional powers to require the filing of tariffs by carriers, to impose record-keeping requirements and to give a “competition notice” stating that certain conduct by a carrier contravenes the CCA.

**Australian consumer law**

The main consumer protection laws, as well as prohibitions against unfair commercial practices, are found in the ACL.

In many cases, the ACL provides protections to all individuals and businesses, where the relevant conduct is in trade or commerce. However, some provisions of the ACL provide protection only to a defined class of consumer or consumer transactions. The definition of consumer or consumer transaction varies in the ACL according to the context.

**Prohibitions against misleading conduct**

The ACL contains a broad prohibition against misleading or deceptive conduct in trade or commerce.

Section 18 of the ACL prohibits a person or corporation engaging, in trade or commerce, in misleading or deceptive conduct or conduct that is likely to mislead or deceive. This prohibition is of very wide application and applies to misrepresentations made in the course of private negotiations and contracts (such as in connection with the sale of a business) as well as to misrepresentations made to the public (such as in advertisements). It is not possible to exclude liability under section 18 by contract.

Civil penalties and criminal sanctions do not apply to a breach of section 18 because of its wide scope. However, a breach of the section can lead to other remedies including injunctions, orders for damages and compensatory orders.

The ACL also contains specific prohibitions against certain types of false or misleading conduct which are subject to both civil and criminal penalties, including:
– making false or misleading representations about a range of matters in connection
with the supply of goods or services, including with respect to:
  » price;
  » standard, quality or grade;
  » country of origin;
  » performance characteristics, uses, or approval;
  » testimonials;
  » the requirement to pay for a contractual right that a consumer already has; and
  » warranties, guarantees, rights or remedies;
– engaging in misleading conduct as to the nature of goods or services;
– making false or misleading representations in relation to land or employment.

**Prohibitions against unconscionable conduct**

Under the ACL, a person must not engage in unconscionable conduct in connection
with the supply or acquisition of goods or services. Unconscionable conduct is
generally understood to mean conduct that is contrary to good conscience. It is
something more than mere unfairness or unreasonableness. The courts will consider a
variety of factors when determining whether a person has engaged in unconscionable
conduct. These factors include:

– the relative bargaining strength of the parties;
– whether the customer could understand the documentation used;
– the use of undue influence, pressure or unfair tactics by the supplier;
– the requirements of applicable industry codes;
– the willingness of the supplier to negotiate; and
– the extent to which the parties acted in good faith.

**Consumer guarantees**

The ACL imposes statutory consumer guarantees in relation to the supply of goods and
services to “consumers”. For the purpose of the consumer guarantees, a “consumer”
is someone who acquires goods or services that are priced at less than A$40,000. A
person is also a consumer if they acquire goods or services that are priced at more
than A$40,000, but they are “of a kind ordinarily acquired for personal, domestic or
household use or consumption”.

The consumer guarantees do not apply to goods supplied for the purpose of re-supply or use in manufacture.

In relation to goods, the consumer guarantees include that:

- they are of an acceptable quality. This means that they must be fit for all of the purposes for which goods of that kind are commonly supplied, are acceptable in appearance and finish, are free from defects, are safe and are durable;
- they comply with their description or conform to a sample or demonstration model (where applicable);
- they are reasonably fit for a purpose that a consumer makes known to the supplier or manufacturer, expressly or by implication;
- the supplier has the legal right to sell the goods to the consumer; and
- they are free from any security, charge or encumbrance that was not disclosed to the consumer.

In relation to services, the guarantees include that:

- they are rendered with due care and skill;
- they are reasonably fit for a purpose that a consumer makes known to the supplier, expressly or by implication; and
- they are provided to consumers within a reasonable time if the time is not otherwise fixed or agreed.

The ACL provides for a variety of remedies in the event that consumer guarantees are not met. If a failure to comply with a consumer guarantee is not a "major failure" and can be remedied, the consumer can seek a repair, replacement or refund from the supplier within a reasonable time. A "major failure" is a failure to comply with a consumer guarantee where:

- a reasonable consumer would not have purchased the goods had he or she been aware of the failure;
- the goods are unsafe;
- the goods are substantially unfit for purpose; or
- the goods depart significantly from a specified description, sample or demonstration model.
In these instances, and where a failure cannot be remedied, the consumer is entitled to either recover compensation for any reduction in value or reject the goods.

Where there has been a breach of the consumer guarantees, a consumer has a statutory right to seek compensation for loss or damage suffered from either the supplier or the “manufacturer” of the goods. Manufacturer is defined broadly under the ACL and can include the importer of goods if the actual manufacturer does not have a place of business in Australia.

Any clause that attempts to exclude or modify a consumer guarantee is void under the ACL. The inclusion of void exclusion clauses in contracts is also likely to amount to a false or misleading representation about consumer guarantees under section 29 of the ACL.

**Product safety**

Any person who in trade or commerce, supplies consumer goods or product-related services, is responsible for complying with the product safety requirements set out in the ACL.

For the purposes of the product safety provisions, consumer goods are things that are intended for or likely to be used for personal, domestic or household use or consumption.

Product related services are services for or relating to the installation of consumer goods, maintenance, repair or cleaning of consumer goods, assembly of consumer goods, or delivery of consumer goods.

Under the ACL, the government can:

- issue a safety warning notice in respect of a product;
- impose an interim or permanent ban on a product;
- impose mandatory safety standards; and
- issue a compulsory recall notice that requires a supplier to recall a product.

There are mandatory product safety and/or information standards for a range of products including children’s toys, children’s nightwear, vehicle jacks, bicycle helmets, sunglasses, cosmetic ingredient labelling and tobacco labelling. The
ACL regulates recall (both voluntary and mandatory) of defective products in certain circumstances. Suppliers are required to notify the ACCC within 48 hours of initiating a product recall or becoming aware that a consumer good or product-related service supplied has, or may have, caused the death or serious injury or illness of any person.

A consumer who suffers loss or damage as a result of defective goods may issue proceedings seeking compensation from a manufacturer or can lodge a complaint with the ACCC, which may take action on the consumer’s behalf.

The ACL provides for strict liability for loss or damage arising from defective products. A product is defined as defective if its safety is not such as persons generally are entitled to expect. This statutory liability applies to all manufacturers as well as many importers and distributors of goods supplied in Australia, and cannot be excluded by contract.

A supplier may be found guilty of a criminal offence if they fail to comply with a ban, a mandatory safety standard, a compulsory recall notice or fails to notify the minister within 48 hours of a recall or serious incident. The maximum fine is up to A$220,000 for an individual or A$1.1 million for a body corporate.

**Unfair contract terms**

The ACL also provides for certain protections against unfair contract terms. These protections currently apply to “standard form consumer contracts”. From 12 November 2016, the unfair contract terms protections will be extended to standard form contracts with small businesses. To apply, one of the parties to the contract must be a “small business” (defined as a business that employs less than 20 people) and the upfront price payable under the contract must be no more than A$300,000 or, if the contract is for a term of more than a year, A$1 million.

Under the ACL an unfair contract term is void. A term will be unfair if it:

- causes a significant imbalance of the parties’ rights and obligations under the contract;
- is not reasonably necessary to protect the legitimate interests of the party advantaged by the term; and
- would cause detriment (including financial detriment) to a consumer if it were relied on.
The ACL exempts certain terms from these provisions, including terms that define the subject matter of the contract or set the upfront price payable under the contract.

**Other prohibitions**

The ACL provides for a range of other prohibitions against unfair practices, in addition to those against misleading or unconscionable conduct.

**Component pricing**

The ACL prohibits component pricing, being the advertising of a price in its component parts rather than as a single figure without prominently specifying the single minimum price. The total minimum consideration payable for the goods or services (including any tax, duty, fee, levy or other additional charge) should be specified just as prominently as the most prominent component.

Consumers should be able to identify the total price of a good or service (including any tax, duty, fee, levy or other additional charges) in a prominent way that is at least as prominent as the most prominent component.

**Bait advertising**

The ACL prohibits the advertising of goods or services at a specified price if there are reasonable grounds for believing that the trader will not have a reasonable supply of those goods. This prohibition prevents a trader from advertising products at an attractive price if there are reasonable grounds for it to believe that those products will not be available in reasonable quantities and for a reasonable period at that price.

**Unsolicited supplies**

Under the ACL, a person must not send unsolicited debit cards and credit cards, or invoices in respect of unsolicited goods or services. Similarly, a person cannot assert a right to payment for unauthorised directory entries or advertisements.

**Referral selling**

Referral selling occurs where consumers are induced to acquire goods or services because of promises about rebates, commissions or other benefits in exchange for introducing other consumers to the product. This type of selling is prohibited as any rebate or benefit received will depend on a third party performing an action that may never occur.
**Pyramid selling**

Pyramid selling involves a scheme in which those who join the scheme are induced to do so on the basis that they can subsequently earn payments for inducing others to join the scheme. The ACL prohibits both the promotion of, and participation in, pyramid schemes.

**Consumer transactions**

The ACL also regulates unsolicited consumer agreements, as well as lay-by agreements.

**Penalties and other remedies**

As for contraventions of the CCA, the ACCC has a range of tools available to it to investigate and enforce potential contraventions of the ACL. The ACCC has the power to issue section 155 notices in relation to potential contraventions, as well as substantiation notices requiring a person to provide documents and/or information substantiating or supporting a claim or representation.

If the ACCC believes that there has been a contravention of the ACL, it can commence court proceedings and for contraventions of many provisions, including most of those referred to above, seek penalties of up to:

- A$1.1 million per contravention for corporations; and
- A$220,000 per contravention for individuals.

The ACCC can also seek a range of other remedies including injunctions, declarations, adverse publicity orders, probation orders, disqualification of individuals from managing corporations, redress on behalf of consumers, community service and information disclosure orders.

The ACCC can also elect to resolve a matter administratively. In addition to accepting court enforceable undertakings, it can also issue “on the spot” infringement notices (with penalties of up to A$108,000 for a listed corporation, A$10,800 for any other corporation, and A$2,160 for an individual) for contraventions of certain ACL provisions.

Certain practices (such as making false representations about specific matters) may also constitute criminal offences.

Private parties can bring court proceedings (including class actions) seeking damages, injunctions, and other remedial orders such as corrective advertising.
Miscellaneous legislation in relation to goods

There is also legislation in Australia regulating the packaging, labelling, ingredients, marketing and sale of certain products and general weights and measures regulations of which overseas suppliers need to be aware. The importation and sale of products that are packaged and labelled overseas will often not be legally acceptable in Australia without modification.

Australia is also a party to the Vienna Sales Convention which governs many international sales of goods in which Australian parties are involved. Where the Convention applies, it will prevail over any Australian legislation (including that outlined above), which concerns the rights and obligations of the parties under the contract, subject to contrary agreement by the parties.
Labour laws
11. Labour laws

Overview of Australian employment law

In recent years, the laws governing Australian workplaces have undergone material changes. In March 2006, the then conservative Federal Government significantly amended the Workplace Relations Act 1996 (Cth). More recently, the former Labor Federal Government replaced much of the legislation with the Fair Work Act 2009 (Cth) (Fair Work Act).

The 2006 amendments signalled a shift away from collective bargaining over minimum terms and conditions of employment (for instance, through unions) to individual agreement-making. These amendments became known as "Work Choices". Most significantly, the Work Choices amendments eliminated State industrial relations systems for the vast majority of employees.

The Labor Government opted to work within the Federal system created by Work Choices. However, a number of significant changes were introduced and took effect on 1 January 2010. The Fair Work Act has been subject to a number of amendments since its introduction, most recently in 2015. However, none of those amendments have lead to major changes in the underlying scheme.

Businesses looking to establish a presence in Australia should seek advice at the time of establishment, in order to comply with the current industrial law instruments.

Sources of employment law

In this Guide, we focus on employees who fall within the Federal system referred to above. Employees who are employed by incorporated entities, (whether Australian or foreign entities) that carry on trade or commerce in Australia, are covered by the Federal system. Most State jurisdictions signed an agreement in 2009 to refer their powers to the Commonwealth for the purpose of creating a truly national industrial relations system. A small number of employees who are employed, for example, by contractors or government bodies in certain states, do not fall within the Federal system. For example, in New South Wales (NSW), Queensland (QLD) and South Australia (SA) the national system does not apply to most public sector employees or the local government sector.
Australian employment laws are derived from a number of sources.

**Contracts of employment**

**Modern Awards**
Modern Awards are quasi-statutory instruments which set out minimum terms and conditions of employment for employees in certain industries (e.g. retail, banking finance and insurance, or manufacturing) or occupations (e.g. clerical and administrative staff, commercial travellers, and professional engineers and scientists), over and above statutory minimums.

**Enterprise Agreements**
These are agreements which involve more than one employee and are supported by Federal (and previously State) industrial relations legislation. A majority of employees must agree to a collective/enterprise agreement in order for it to become operative. These instruments may override pre-existing awards.

**Existing Australian Workplace Agreements (AWAs)**
Individual written agreements between an employee and an employer which set out terms and conditions of employment. From 28 March 2008, employers and employees could not create, or vary, an AWA.

**Existing Individual Transitional Employment Agreements (ITEAs)**
There are special transitional agreements for employees that had AWAs in place prior to March 2008.

**State and Federal legislation and regulations**
These instruments deal with a wide variety of subject matter. Some statutes deal specifically with the regulation of employment and industrial relations. Others indirectly affect the employment relationship. Despite Work Choices, Federal-system employers who were, prior to 27 March 2006, covered by a State award or State laws (dealing with defined subject areas), may continue to be bound by parts of these instruments. This is because, in relation to Federal-system employers, Work Choices, and later the Fair Work Act, has preserved certain provisions in these instruments.

**The accumulated case law of the common law courts**
For example, the common law is the primary source for determining the distinction between employment and independent contractor relationships.

The decisions of Federal and State industrial tribunals.
Regulated and non-regulated employees

It is important when considering Australian employment law to distinguish between two classes of employees.

Regulated employees

The first class consists of those employees who are covered by industrial awards and collective workplace or enterprise agreements. These are generally “blue-collar” employees in industries such as the mining, manufacturing or agricultural, or “white-collar” employees working in sales, administration, government, health, media and education, and also skilled tradespeople such as professional engineers, information technology professionals working in the IT industry, electricians and scientists. The terms and employment benefits of these employees have traditionally been set by awards and/or collective workplace/enterprise agreements achieved through the arbitration of disputes by State and Federal industrial relations tribunals and also collective bargaining. Failure to comply with these awards and industrial agreements may lead to prosecution and civil penalties. An employer and employee cannot contract out of the terms and conditions of employment contained in an award or collective workplace agreement by entering into a private agreement (except, by entering into a compliant AWA or ITEA, in the past or an individual flexibility agreement, currently). However, an employer can supplement these minimum benefits by agreeing to provide the employee with additional benefits.

Non-regulated employees

Non-regulated employees are not covered by awards or collective workplace enterprise agreements. Non-regulated employees are usually senior managers, executives and professionals (other than professional engineers, scientists or IT professionals in the IT industry). Other than various minimum benefits and rights, which are discussed below, and transitional instruments adopting prior State laws, the rights and obligations of these employees are governed by privately negotiated employment contracts. The Modern Awards system implemented by the Labor Federal Government (effective 1 January 2010) does not extend the coverage of awards to classes of employees who were previously award free. Additionally, where a Modern Award covers the employment of a particular employee, the employee and employer can enter into a “high income guarantee” arrangement whereby the award will not apply to the individual employee during the valid operation of the guarantee.
As a consequence of the Fair Work Act, a number of minimum standards (the National Employment Standards or NES) were introduced into Federal legislation with effect from 1 January 2010. Although there are some exceptions, these standards form minimum employment conditions for all Federal-system employees, regardless of whether or not they are regulated or non-regulated employees. An employer cannot “contract out” of these standards by entering into a private agreement including an individual employment agreement. The National Employment Standards are outlined in the following table.

<p>| Ordinary hours of work | Employees must not be required to work beyond a maximum of 38 hours per week plus “reasonable” additional hours. If an employee is not covered by a modern award or enterprise agreement, the employer and employee may agree in writing to average these hours over a specified period not longer than six months. If an employee is covered by a modern award or enterprise agreement, then averaging may only occur in accordance with that industrial instrument. The NES do not limit the period over which hours may be averaged under such an instrument. In determining what are reasonable additional hours, a Court will review a number of factors including the nature of the employment, the employee’s personal circumstances and the employer’s operational requirements. |
| Requests for flexible working arrangements | Employees who are parents to, or who have responsibility for the care of a child under school age (or a disabled child under 18), may request a change in their working arrangements (including working on a part-time basis) to assist with the care of a child. From 1 July 2013, the right to request flexible working arrangements was extended to employees who are carers, over 55 years, experiencing domestic violence (or providing care or support to a family or household member experiencing domestic violence) or have a disability. The NES do not limit the type of changes which may be requested. The employer may only refuse a request for a flexible working arrangement on reasonable business grounds. Employees must have worked for the employer for at least 12 months before making such a request, or must be long-term casuals with an expectation of ongoing employment. |</p>
<table>
<thead>
<tr>
<th>Leave Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annual leave</td>
<td>20 days of paid annual leave per year (calculated pro-rata for part-time employees). An additional week is available to shift workers employed in a business in which shifts are continuously rostered 24 hours a day for seven days a week and are regularly rostered to work those shifts and regularly work both Sundays and public holidays. Annual leave accumulates from year to year if not taken by an employee, and accrues based on ordinary hours of work. Employers may require an employee to take a period of paid annual leave, but only if such requirement is reasonable. Certain employees are able to “cash out” annual leave by mutual agreement.</td>
</tr>
<tr>
<td>Personal leave</td>
<td>10 days of paid leave per year, which can be taken as sick or carer’s leave, and can be accumulated. There is an additional two days of unpaid carer’s leave available for unexpected emergencies. Two further days of paid compassionate leave accrue where an employee’s immediate family or household member contracts an illness or sustains an injury that poses a serious threat to life or dies.</td>
</tr>
<tr>
<td>Community service leave</td>
<td>Employers must allow their employees to take unpaid leave for eligible community service activities, such as jury duty or voluntary emergency management.</td>
</tr>
<tr>
<td>Long service leave</td>
<td>Long service leave entitlements under certain pre-reform industrial instruments (e.g. collective workplace agreements) are incorporated into and given effect under the NES. Generally, pre-existing State and Territory long service leave legislation continues to apply. There are different entitlements under the long service leave legislation in each State and Territory.</td>
</tr>
<tr>
<td>Public holidays</td>
<td>Employees are entitled to be absent from work on a day or part-day that is a public holiday in the place where the employee is based for work purposes. An employer must pay a base rate of pay for ordinary hours that would have been worked on that day. There are eight days prescribed as public holidays under the NES.</td>
</tr>
</tbody>
</table>
### Redundancy pay and notice of termination

Employers must pay redundancy benefits to employees who are terminated on the grounds of redundancy in accordance with a scale which varies depending on the employee’s period of service with the employer.

Employers must give employees a minimum period of prior notice in writing before terminating employment. This notice period depends on the employee’s period of service.

### Parental leave

Up to 24 months of unpaid leave upon the birth or adoption of a child. This applies to permanent full and part-time employees, and certain eligible casuals who have worked for an employer for at least 12 months.

Employees are entitled to return to their position following the period of the leave or a position for which they are qualified and capable of performing (even if a lesser salary) if their original position has ceased to exist.

Where an employee seeks to extend their unpaid parental leave beyond an original 12 month period, the employer must not refuse the request unless the employer has given the employee a reasonable opportunity to discuss the request.

---

## Leave

### Annual, personal and parental leave

Annual, personal and parental leave entitlements form part of the National Employment Standards (listed in the above table). Eligible employees are currently also entitled to paid parental and dad and partner pay which is government-funded.

### Long-service leave

Long service leave entitlements are principally dealt with under State legislation. Depending on the relevant jurisdiction, the entitlement to take long service leave accrues after 10 or 15 years of service with an employer and is generally calculated on the basis of one month’s paid leave for every five years of employment.
In some jurisdictions, employees who are entitled to commissions or bonuses may be entitled to long-service leave paid at a rate which includes commissions or bonuses. Long-service leave legislation in some States also includes rules regarding counting service with related bodies corporate (for example, parent entities) in other jurisdictions as service for the purposes of calculating long-service leave. Pro-rated long-service leave is also generally paid out on termination of employment after five years of service depending upon the nature of termination.

**Public holidays**
Employees are usually entitled to be absent from work without loss of pay on the days of the year which are declared public holidays and gazetted by State or Federal parliament.

**Superannuation**
Under the Superannuation Guarantee Scheme, all employers are required to make minimum levels of superannuation contributions on behalf of each of their employees.

Superannuation contributions must be made to a complying fund, and failure to do so will attract a tax or charge. The scheme applies to all employees whether they are full-time, part-time, casual or temporary employees.

Where employers fail to make contributions on behalf of employees they are liable for a superannuation guarantee charge which is currently equal to 9.5% of an employee’s earnings base (broadly, earnings of the employee in respect of ordinary hours of work), up to a specified maximum contribution base (currently A$50,810 per quarter for the 2015/16 income year, and indexed annually). The amount used for an employee’s “earnings base” will be different depending upon the individual circumstances of the employee.

The Federal Government has passed laws that will increase the superannuation guarantee charge rate from 9% to 12% of ordinary time earnings from 1 July 2013 on an incremental basis. From 1 July 2014, the superannuation guarantee charge increased to 9.5%. Under the current regime, the charge will remain at 9.5% until 1 July 2021 at which time it will increase to 10%. Further increases of 0.5% per year will ensue up until 2025.

Superannuation obligations are administered by the Australian Tax Office, and form part of an employer’s quarterly reporting obligations.
Restraints of trade
An employer may, by agreement, bind an employee to a post-employment restraint of trade. A restraint of trade will only be enforceable if the employer can establish that the restraint is reasonably necessary to protect its “legitimate business interests”, is in the public interest, and is not unduly injurious to the employee. These “legitimate business interests” are confined to the employer’s confidential information and client relationships. Therefore, the “reasonableness” of a restraint will depend on the degree to which the relevant employee had access to information and clients during employment and the employee’s ability to exploit this access post-employment to the detriment of the employer. New South Wales has legislation which helps “save” clauses which may otherwise be judged as unreasonable.

Confidentiality
Confidentiality obligations are implied into all employment contracts.

An employer may also require an employee to undertake not to disclose (except where required by law) certain information relating to trade secrets and information that is confidential to the employer and comes into the employee’s knowledge during and because of his or her employment with the employer. These confidentiality obligations generally continue after the employee’s employment ends.

The courts will not protect the know-how and skill of an employee that is acquired as a necessary consequence of the way the employee is employed or trained. An employee is free to use this skill and know-how after the employment relationship has ended.

Termination of employment
Termination of employment is the most litigated area of employment law in Australia. There is no concept of “employment at will” in Australia. Other than in cases of serious and wilful misconduct justifying summary dismissal, Australian employment laws impose minimum notice of termination provisions which apply to all Federal system employees.

An employer who is considering terminating the employment of an employee of medium to low-salary status should check the notice provisions in the contract of employment, reconcile these provisions with the minimum standards in the relevant award and under federal legislation, ensure that a fair procedure has been adopted in accordance with unfair dismissal legislation, and ensure that the reasons for termination are valid and do not breach anti-discrimination laws.
Minimum notice requirements

Under the NES, an employer is required to provide a permanent employee with at least the following minimum periods of notice of termination, or a payment in lieu of notice of at least the amount of remuneration the employee would have received at the employee’s full rate of pay until the end of the minimum period of notice.

<table>
<thead>
<tr>
<th>Employee’s period of continuous service with the Employer</th>
<th>Period of notice</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not more than one year</td>
<td>At least one week</td>
</tr>
<tr>
<td>More than one year, but not more than three years</td>
<td>At least two weeks</td>
</tr>
<tr>
<td>More than three years, but not more than five years</td>
<td>At least three weeks</td>
</tr>
<tr>
<td>More than five years</td>
<td>At least four weeks</td>
</tr>
</tbody>
</table>

An employee is entitled to a further week of notice if the employee is over 45 years old and has completed at least two years of continuous service with the employer at the end of the day on which notice of termination is given.

If no period of notice has been agreed between the employee and employer, a Court can imply an obligation that the employer provide a “reasonable” period of notice in excess of the minimum requirements. Reasonable notice is not defined and requires consideration of the circumstances of each termination, including the employee’s seniority and length of service.

Contractual rights

Generally in Australia, employers and employees enter into written employment contracts. The base instrument for every employment relationship is the employment contract.

It is usual for an employment contract to provide that either party can terminate the employment for any reason by simply giving the other party a specified period of prior notice that the termination is to occur.

If an employer fails to give the appropriate period of notice, then the employee is entitled to sue the employer for breach of the employment contract. Compensation is generally (but not always) limited to the remuneration which the employee would have received if the employee worked out the full notice period, less any amount that the employee has received elsewhere.
Awards and collective workplace agreements usually specify minimum notice periods for the employees they cover. It is also an implied right in every employment contract that one party can terminate the employment without giving notice if the other party seriously breaches the terms of the contract.

An employer has the right to summarily dismiss an employee if the employee is guilty of serious misconduct. Fraud, dishonesty, assault, repeated and wilful disregard of the employer’s directions, and gross negligence are examples of serious misconduct. Unsatisfactory performance and minor breaches of the employer’s policies usually do not amount to serious misconduct.

**Legislative rights**

State and Federal parliaments have enacted legislation which regulates an employer’s right to terminate employment.

**Fair procedure**

Certain employees can challenge the termination of their employment under Federal and State unfair dismissal laws, which generally require that an employer does not terminate an employee’s employment in circumstances where the termination would be “harsh, unjust or unreasonable”.

Under the Fair Work Act, an employee who is engaged by an employer with less than 15 employees is eligible to lodge an unfair dismissal claim after completing 12 months service. An employee who is engaged by an employer with 15 or more employees is eligible to lodge an unfair dismissal claim after completing six months service. The “Small Business Fair Dismissal Code” must be complied with by small-business employers (employers with less than 15 employees).

Certain categories of employees are not protected from “unfair dismissal” under the Fair Work Act and are not eligible to lodge unfair dismissal claims. These categories of employees include (for example):

- employees who are paid more than the “high income threshold” and who are not covered by award-derived conditions;
- employees who have not completed the minimum employment period (which is six months for employees employed by employers with more than 15 employees and 12 months for employees of Small Business Employers with less than 15 employees);
- fixed-term employees, short-term or casual employees; and
employees whose employment has been terminated because of “genuine redundancy”.

Termination on unlawful grounds
The Fair Work Act and State anti-discrimination legislation also specifically prohibit termination of employment for various reasons, including:

- temporary absence from work because of illness or injury;
- trade union membership or non-membership;
- race, colour, sex, sexual preference, transsexuality, age, physical or mental disability, marital status, family responsibilities, pregnancy, religion, political opinion, national extraction or social origin;
- absence from work during maternity or parental leave; and
- the filing of a complaint or participation in proceedings against an employer involving an alleged violation of laws or regulations, or recourse to competent administrative authorities.

These restrictions apply to all employees, irrespective of their income or award coverage.

Termination of employment on any of the above grounds is unlawful and the employee may seek reinstatement and/or compensation. Penalties may also be awarded against the employer.

Redundancy
An employee is entitled to additional severance payments if his or her employment is terminated because of redundancy under the NES.

Under Australian law an employee’s position is considered to be redundant where:

- the employer has made a definite decision that it no longer requires the job the employee has been doing to be done by anyone;
- the decision is not due to the ordinary turnover of labour;
- the decision leads to the termination of the employee’s employment;
- the termination of the employee is not on account of any personal act or default on the part of the employee.

Redundancy benefits are usually calculated by reference to an employee’s length of service, up to a capped amount. Bona fide redundancy payments are subject to favourable tax treatment.
Federal legislation (and some industrial instruments) contain procedural requirements which must be complied with before a termination on the ground of redundancy can take effect.

Further, Federal unfair dismissal laws impose additional criteria relating to “genuine redundancy”. Under the Federal unfair dismissal laws, a dismissal is a case of genuine redundancy if the employer has complied with applicable consultation obligations in a modern award or enterprise agreement. A dismissal is not a case of genuine redundancy if it would have been reasonable in all the circumstances for the person to be redeployed with the employer or an associated entity.

**Record-keeping requirements**

Under the industrial relations legislation in most Australian jurisdictions, employers are required to maintain certain records in relation to their employees, including records detailing remuneration paid, hours worked, leave entitlements, and records relating to other conditions of employment.

**Anti-discrimination law**

At the present time there are numerous Acts of Parliament throughout Australia which deal with anti-discrimination laws. They set out various prohibitions on discrimination and harassment, possible defences and various penalties and remedies which may apply. Anti-discrimination legislation also establishes boards or tribunals to investigate and deal with complaints of discrimination (for example, the Federal Human Rights and Equal Opportunity Commission (HREOC)). Federal system employees have access to remedies under State and Federal anti-discrimination legislation.

Many discrimination laws have direct and indirect application to the employment relationship and in respect of termination of employment, through redundancy or otherwise.

Prohibited grounds for discrimination include:

- age;
- race, colour, descent, national or ethnic origin and immigration;
- sex, sexual characteristics, marital status, family responsibility, pregnancy and breastfeeding;
- sexual preference or activity;
transgender status, gender identity and interest status;
− religion, political opinion, and trade union activity;
− criminal record;
− physical features;
− physical or mental disability, intellectual or psychiatric disability, medical record, HIV/AIDS status; and
− parental status or family or carer responsibilities.

Generally, this legislation draws a distinction between two types of discrimination, direct and indirect discrimination. Direct discrimination occurs when a person with one of the relevant characteristics is treated less favourably than a person without the characteristic would be treated in the same or similar circumstances. Indirect discrimination occurs when an employer attempts to impose an unreasonable condition on the receipt of a benefit or employment opportunity and the impact of this condition is that a disproportionate number of persons of one class are unable to comply with the condition. A person who lodges a complaint does not need to establish that the alleged discriminator intended to discriminate.

Harassment (sexual harassment and other forms of harassment) are specifically dealt with in State and Territory anti-discrimination legislation. Harassment is conduct which a reasonable person would find offensive, intimidating or humiliating.

Under State and Federal anti-discrimination legislation, discrimination or harassment which is committed by an employee is deemed also to have been engaged in by the employer (that is, the employer is vicariously liable for the employee’s conduct), unless certain defences can be established. Under Federal anti-discrimination legislation, to avoid liability, an employer must show that it took all reasonable steps to prevent its employees from performing and engaging in unlawful discrimination.

The defences are similar under most State and Territory legislation. For example, under NSW anti-discrimination legislation, the primary defence is that the employer did not authorise the employee to engage in unlawful discrimination. An employer will be taken to have authorised unlawful conduct if the employer was aware of the conduct and failed to take effective action to prevent or stop the conduct.
Both State and Federal anti-discrimination laws effectively impose duties on an employer to take positive steps to protect its employees from unlawful discrimination and harassment. At a minimum, to comply with anti-discrimination legislation, an employer must prepare, distribute and properly administer an anti-discrimination and harassment policy which provides employees with an avenue to lodge a complaint, and a procedure for the investigation of the complaint.

In a number of jurisdictions, anti-discrimination legislation also imposes a positive duty to make “reasonable adjustments” to a job for employees or job candidates with a disability.

If a complaint is made to an employer or its management and the employer fails to take obvious steps to prevent unlawful conduct, such as speaking to the person(s) concerned and educating staff regarding appropriate workplace behaviour, the employer is likely to be liable for unlawful conduct engaged in by its employees.

**Work health and safety law**

In addition to an employer’s common law duties of care, work health and safety legislation in each State and Territory imposes broad general obligations, including obligations to:

- ensure, so far as reasonably practicable, the health, safety and welfare of all persons performing work for the employer (including employees, labour hire workers and contractors); and

- ensure, so far as reasonably practicable, that persons other than workers are not exposed to risks to their health or safety arising from the employer’s business activities.

At the time of writing, all Australian States and Territories (except Victoria and Western Australia) have introduced uniform work health and safety legislation. Work health and safety legislation imposes strict liability obligations. Strict liability means that persons who have obligations under the legislation are strictly liable for offences if they fail to comply with their obligations.

Work health and safety legislation also imposes personal obligations on the officers (including directors and senior managers) of a company or organisation which carries on business activities, to exercise due diligence to ensure that the company or organisation complies with its work health and safety obligations.
The general obligations under work health and safety legislation are broad and onerous, but employers and organisations must also be aware of and comply with work health and safety obligations which are prescribed by or given effect through:

- occupational health and safety regulations;
- industry specific regulations;
- codes of practice;
- court decisions;
- safety alerts, notices and directions issued by regulatory authorities; and
- Australian Standards.

The focus of the legislation is not accidents but risks. There is no need for an accident or injury to occur in order for an offence to be established. There simply needs to be a risk to health and safety. An obvious example is risks which arise when an employer allows an employee to use an inadequately guarded piece of machinery, irrespective of whether the employee ultimately injures himself or herself.

**Workers compensation**

Legislation in each State requires employers to take out and maintain workers compensation insurance in respect of their employees and certain categories of contractors (who are deemed to be “workers”). Workers compensation legislation provides compensation for workers who suffer illnesses and injuries which arise out of or in the course of their employment.

Workers compensation legislation includes strict liability provisions. This means that a worker who suffers a work related injury or illness is entitled to compensation, and the employer of the worker is strictly liable to pay compensation. It does not matter whether the worker or the employer is at fault.

Employers who fail to take out and maintain appropriate workers compensation insurance polices are liable for offences.
Anti-bullying

Since 1 January 2014, a worker who is subject to the Fair Work Act applies (which does not include a person who is not employed by constitutional corporations) as the right to lodge a “workplace bullying” complaint with the Fair Work Commission if the worker reasonably believes he or she has been bullied at work.

Bullying is defined as repeated unreasonable behaviour by an individual or group of individuals towards a worker which creates a risk to health and safety.

While the Fair Work Commission has the power to conciliate bullying claims and make orders, the Commission cannot award compensation to an applicant worker.

Reasonable management action carried out by an employer in a reasonable manner is excluded from the workplace bullying provisions in the Fair Work Act.

The Commission’s powers to make anti-bullying orders are limited to where a worker has been bullied “at work” and there is a risk that the worker will continue to be bullied at work. It is unlikely that the Commission can make orders if a worker is no longer employed, as there will not be a risk that the worker will continue to be bullied “at work”.

Trade unions

State and Federal industrial relations legislation regulates the internal operations of trade unions and provides for a system of registration of unions. This legislation tends to be quite intrusive in the administration of trade union affairs, including the use of union funds and election of office holders. Each trade union also has its own detailed set of rules which, among other things, specifies the eligibility requirements for employees to become members. These rules are regulated by statute.
Industrial disputes and negotiation of collective agreements

Industrial disputes are also heavily regulated by Federal legislation. The Federal legislation in particular sets out a framework for taking protected industrial action in the course of workplace bargaining, and recourse for employers in circumstances where industrial action is not protected. Under the Fair Work Act, a secret ballot must be taken and an application must be made to Fair Work Australia to conduct such a ballot. Fair Work Australia is able to refuse the application if the applicant has not genuinely tried to reach agreement or is engaging in pattern bargaining. To approve the action, 50% of eligible voters must vote and more than 50% of the votes cast must approve of the action. Industrial action cannot be taken before the nominal expiry date of a relevant collective agreement.

Under the Fair Work Act, parties who are negotiating an enterprise agreement must bargain in good faith. This involves participating in meetings at reasonable times, providing relevant information, responding to proposals in a timely fashion, giving genuine consideration to the needs of other parties, and refraining from capricious or unfair conduct.
Visa and immigration requirements
12. Visa and immigration requirements

General

All foreign nationals who travel to Australia require a valid visa for entry. There are a variety of visas available to suit the particular circumstances of the entrant.

Each visa has specific criteria which must be fulfilled by the visa applicant before it can be granted by the Department of Immigration and Border Protection (DIBP). Depending on the visa type, applications can be made in Australia with the DIBP or made overseas online or with an Australian Mission.

It is the responsibility of all employers to ensure that any potential employee holds, or is eligible to hold, a valid visa with appropriate work rights. Failure to do so may result in civil, criminal and/or administrative sanctions.

Temporary residence visas

Tourist visas

Tourist visas are appropriate for foreign nationals who wish to enter Australia for holiday or recreation purposes or for undertaking a maximum of three months’ study.

Tourist visas are typically granted for a stay of between three and 12 months. Depending on the visa type and the applicant’s nationality, tourist visa applications can be lodged online or in person at the local DIBP office.

Employment is strictly prohibited on this visa and some visa holders may be precluded from applying for a subsequent visa while in Australia.

Temporary business visas (short stay)

The Business Electronic Travel Authority (Business ETA) is an electronic visa designed to facilitate travel by foreign nationals of countries who, on the basis of statistical data, have shown to be genuine business visitors and are unlikely to overstay or contravene their visas. These countries include, Austria, Belgium, Canada, France, Germany, Ireland, Japan, Malaysia, Singapore, Sweden, the United Kingdom and the United States. The Business ETA is designed for business visitors who wish to undertake business activities such as attending conferences, seminars, business meetings, negotiating contracts or training sessions.
The Business ETA allows multiple trips to Australia and is valid for use for a period of 12 months. Visa holders may enter Australia and stay for a maximum of three months on each occasion (with no limit on the number of entries that may be made). Work of any kind on this visa is prohibited.

The Subclass 651 eVisitor Visa (651 visa) is also an electronic visa with the same effect and operation as the Business ETA. The holder of this visa may enter Australia for a maximum of three months on each occasion during the 12 month life of the visa. This visa allows for business activities only, employment of any kind is prohibited. This visa is available to most European countries, including Austria, Belgium, France, Germany, Ireland, Italy, Luxembourg, Netherlands, Sweden, Switzerland and the United Kingdom.

The Subclass 600 visitor visa is for business travel to Australia for those passport holders who are ineligible for a Business ETA or Subclass 651 eVisitor Visa. Validity and duration is at the discretion of DIBP or the issuing Australian mission in the applicant’s country of residence. Typically, the visa holder will be granted multiple entries and the length of stay will depend on the applicant’s business requirements in Australia. Work of any kind is once again not permitted.

**Temporary work visa (short stay)**

The Subclass 400 visa is a short stay work visa which will allow the employee to work in Australia for typically 12 weeks. The visa does not require employer sponsorship, however, supporting documents from the employer will be required to verify the employee’s claims. The work to be undertaken must be skilled and short-term in nature. The visa is valid for six months, usually with multiple entries. A maximum stay of 12 weeks is normally permitted, though this is negotiable depending on individual circumstances. Up to six months stay and work authorisation may be obtained if there is a clear employment need.

Applications must be lodged outside Australia and the employee must be outside Australia on visa grant. Certain passport holders may lodge online, for example, citizens of Canada, France, Germany, HKSAR, Ireland, Japan, South Korea, Malaysia, Singapore, United Kingdom and United States.

**Long stay work visa**

The Temporary Work (Skilled) visa (subclass 457) is a popular visa used by Australian and overseas companies who wish to employ foreign nationals in Australia. A subclass 457 visa is valid for up to four years and can be renewed an unlimited number of times.
The 457 visa application process is undertaken in three stages:

1. The visa applicant’s employer (sponsor) must apply to the DIBP for permission to sponsor foreign nationals. This sponsor may be an Australian business or an overseas business seeking to establish operations in Australia. In assessing whether a business is a suitable sponsor, the DIBP will consider a number of factors including whether the business is lawfully operating, its financial viability and the training and professional development opportunities it provides to local Australian staff. Companies which are approved by the DIBP to sponsor 457 visa holders are usually also their employer, however, the employer and sponsor may be different entities as long as they are “associated” so there may be a parent or sister company relationship.

2. The position which will be filled by the 457 visa holder must meet both the relevant market requirements in relation to salary and the minimum skills threshold. That is:
   - the applicant’s annual earnings must be equivalent to or greater than what is being offered by the Australian labour market for the particular position and location;
   - the position must fall within one of the following four “skilled” groups of occupations:
     - managers
     - professionals
     - associate professionals, or
     - skilled tradespeople.

3. The visa applicant is assessed as being suitably skilled and qualified for the position and meets the requisite character, English language and health requirements.

Companies which are approved to sponsor 457 visa holders are subject to certain sponsorship obligations. The four main sponsorship obligations are:

− to notify the DIBP within 28 days of the sponsored employee ceasing employment;
− to keep and provide certain records to DIBP in relation to sponsored employees;
− for Australian sponsors, to ensure that they continue to meet the training thresholds towards their Australian staff; and
− to ensure that the cost of a sponsored employee’s return travel is met.
The DIBP undertakes regular monitoring of all companies it approves as business sponsors in order to confirm that they are meeting their immigration obligations. Sanctions for failing to meet these obligations include administrative action and/or fines.

**Student visas**

Student visas are available to foreign nationals who wish to enter Australia in order to undertake an approved course of study. A student-visa holder is permitted to engage in up to 40 hours of employment per fortnight while their course is in session and unlimited employment during session breaks. A student-visa holder must continue to meet attendance and other specific course requirements to retain their visa.

**Training and research visas**

Training and research visas are available to foreign nationals who wish to undertake structured workplace-based training in Australia which is relevant to their qualifications or experience. The purpose of this training must be to enhance and develop the applicant’s skills and knowledge which they can then utilise on their return to their country of residence. Training and research visas can be granted for up to two years and permit both full and part-time employment.

Before an application for a training and research visa can be granted, the Australian company providing the training must be granted approval by the DIBP to sponsor the trainee. The company’s current training and employment record will be assessed and it is essential that the employment opportunities for local staff are not adversely affected by the grant of the training and research visa.

**Permanent residence visas**

Permanent residence visas are available through a number of schemes including employment, independent skilled migration, business investment and trade, and the applicant’s relationship with an Australian citizen or permanent resident. Most permanent residence visas provide full work and residence rights.

Applicants for employment related migration usually fall within the Employer Nomination Scheme, discussed below.

Changes to the skilled migration scheme over the last few years have resulted in a majority of applications in this category being placed in an indefinite processing queue unless the occupation selected is in demand. As a result, the points-based system of independent skilled migration (which does not require the sponsorship
of an Australian employer) has decreased in attractiveness as a viable visa option for many prospective applicants. In turn, this has lead to increased demand for the Employer Nomination Scheme.

**Employer Nomination Scheme**

The Employer Nomination Scheme allows Australian businesses to sponsor skilled foreign national employees for permanent residence.

The nominating company is required to demonstrate that it is lawfully operating and provides training and professional development opportunities to local Australian staff. It must offer the applicant either a permanent full-time position or a contract of at least two years duration (which does not exclude the possibility of renewal).

The visa applicant’s position must be deemed by DIBP to be skilled and it must fall under one of four occupational categories:

1. Managers
2. Professionals
3. Associate professional, or
4. Skilled tradespeople.

A foreign national is eligible for this visa if they meet one of the following pathways:

**PATHWAY 1** They have worked for their sponsoring employer while holding a subclass 457 visa for at least two years prior to application.

**PATHWAY 2** They have undertaken a skills assessment with their industry body, have met the Australian standards for their nominated occupation, and have demonstrated that they have at least three years of work experience in that occupation. Exemptions are offered to high income earners.

A permanent residence visa applicant must have suitable English language ability. Applicants under Pathway 1 must achieve an International English Language Testing System (IELTS) score of five in each of the four test components of reading, writing, speaking and comprehension. Applicants under Pathway 2 must achieve an IELTS score of six in each of the four test components. Exemptions apply to applicants holding a passport from UK, Ireland, Canada, USA or New Zealand.

Visa applicants must also be under the age of 50 unless exempt.

Health and character checks are also required for the grant of this visa.
Importing and exporting
13. Importing and exporting

Tariff protection

Australia is a member of the World Trade Organisation (WTO) which shapes many aspects of Australia’s trade laws. Within the general framework of the WTO, the Australian Government is seeking to expose Australian industry to increased competition from imports. At the same time, the WTO is being used as a forum for voicing Australian complaints on restrictive trade policies of other countries.

The WTO prohibits discrimination between Member States insofar as rates of duty are concerned, although preferences which were in existence at the time the WTO was formulated are permitted to continue. Australia maintains some preferential policies, particularly in relation to products that are manufactured in nominated developing countries.

Classification of goods and rates of duties

The applicable rates of duty for imported goods are specified in schedules to the **Customs Tariff Act 1995** (Cth). There can be variations in the rates of duty between different tariff items and it is important to determine the correct classification of goods.

Like many other countries, Australia classifies goods applying the Harmonized Commodity Description and Coding System, commonly referred to as the Harmonized System.

Tariff concession system

The main purpose of tariff barriers is to foster the development and expansion of domestic industries, rather than to raise revenue. It follows that where there is no domestic industry, the need to impose trade barriers in the form of customs duties disappears. Australia’s Tariff Concession System permits duty-free entry of imports in cases where there is no competitive domestic industry. Importers of goods can apply for a Tariff Concession Order (TCO) under this system for concessional rates of duty to be applied. Once a TCO has been granted for goods, it will apply to all importers of the goods.

In order to obtain a TCO, it is necessary to establish that, on the day the application was lodged, no substitutable goods were produced in Australia in the ordinary course of business. Substitutable goods are Australian-produced goods that are
put to a use that corresponds with a use to which the imported goods can be put. Should this criterion be satisfied, it will be possible to obtain a TCO and to import otherwise dutiable goods into Australia free of duty.

Certain goods are precluded from eligibility for TCOs, including foodstuffs, clothing and passenger motor vehicles.

**Customs valuation**

The Australian valuation system is a self-assessment system under which it is the responsibility of the importer to correctly value imports. Mistakes in valuation may attract penalties.

The Australian legislation largely conforms with the terms of the WTO Agreement on customs valuation. Imported goods are valued under one of nine different methods of valuation. These valuation methods cannot be selected at will and must be adopted in the sequence set out in the legislation. The first and most common is the transaction-value method, being the price actually invoiced by the supplier to the importer, subject to various adjustments. Alternative methods will be used where the transaction-value method is inappropriate, for example where goods are exported to Australia on consignment or where price is not determined on an arm’s-length basis.

**Anti-dumping**

Dumping occurs when an exporter sells goods to Australia at a price that is below the “normal value” of the goods. The normal value will usually be the domestic price of the goods in the country of export. The margin of dumping is usually the amount by which that normal value exceeds the “export price” of the goods. When this occurs, dumping duties can be imposed on those exports, provided it is also shown that the dumped goods cause or threaten material injury to Australian manufacturers of the same goods. If any dumping duties are imposed, they are payable on importation by the importer.

The Anti-Dumping Commission (Commission) was established in July 2013 to administer Australia’s anti-dumping system in a more effective way. Since the Commission’s establishment, there has been a large increase in anti-dumping related investigations.

The maximum amount of duty which can be imposed is the amount of the “dumping margin”, being the difference between the normal value and the export
price. Duty of less than the “dumping margin” may be imposed if the Commission considers that the imposition of a lesser duty would be sufficient to remove the injury being caused to the Australian industry. This is determined by reference to the “non-injurious price”, being the minimum price necessary that the exported goods could be sold in Australia without causing injury to the Australian industry. Accordingly, in some cases, it may be possible to avoid the imposition of dumping duties by the exporter undertaking to the Commission to export only at a non-injurious price level.

The legislation also contemplates the imposition of a “countervailable subsidy” if financial assistance (or income or price support) has been paid by a foreign government that benefits an exporter, either directly or indirectly and which is specific to an enterprise or industry or group of enterprises or industries.

If there are reasonable grounds for the publication of a dumping and/or countervailing notice, the Commission will initiate an investigation. The Commission has up to 155 days to investigate and report to the Minister (unless the timeframe is extended by the Minister). The Minister generally has 30 days to decide whether or not to accept the Commission’s recommendations and final report. Following the Minister’s decision, measures may be imposed.

Certain decisions of the Minister relating to dumping and countervailing investigations and inquiries may be reviewed by the Anti-Dumping Review Panel (Review Panel). Upon conducting a review, the Review Panel will provide a report containing recommendations to the Minister.

Decisions of the Minister after considering a report of the Review Panel will only be appealable to the Federal Court.

**Controls and requirements for particular types of imports**

In addition to complying with usual customs clearance procedures, there may be other regulatory obligations imposed on an importer wishing to bring an item into Australia for Australian use. Some examples are below.

Importers will need a permit to import certain commodities into Australia such as particular plant and animal and food products, weapons and other sensitive items.

Importers must apply trade descriptions to imported goods in accordance with the prescribed requirements. There is also specific consumer law regulation of country of origin representations.
Specific labelling requirements apply to certain items, such as customer telecommunications equipment and particular radio communications equipment. The label displays that the equipment complies with the relevant standards.

**Export controls**

A permit is required to export from Australia controlled goods and technology. The list of controlled items (the Defence Strategic Goods List) reflects the list set by member countries to the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual Use Goods and Technologies.

In November 2012, Australia passed legislation for a permit system for intangible transfers from within Australia to outside Australia of controlled subject-matter (e.g. by email or allowing remote access). These laws fully commenced in April 2016.

Exports of some goods and other transactions connected with certain nations or designated entities or individuals may be subject to United Nations Security Council Sanctions or Australia’s autonomous sanctions regime. Sanctions extend to imports, services and other activities.

There are also export permit and licensing requirements for other sensitive subject-matter such as hazardous waste.

**Industry development requirements**

Overseas firms proposing to supply certain goods, information or services to Federal, State/Territory or Local governments should be aware of the following programs and government procurement requirements which have been implemented to encourage the development of internationally competitive activities in Australia, and which place obligations on overseas suppliers to undertake certain activities.

**Local job and industry preference plans**

Some State Governments will apply local job preference policies to their procurements. For example, the policy may allow a preferential evaluation weighting to be applied to a tender that contains a certain level of small and medium enterprises (SMEs) participation.
Commonwealth procurement rules

Commonwealth Government procurement is primarily conducted under the Commonwealth Procurement Rules which are issued under regulations. The rules create a framework for Commonwealth Government officers to follow when conducting procurement. The key principle behind the rules is to provide for value for money, based on a comparative analysis of the costs and benefits and the promotion of competition.

Under the rules, all potential suppliers to government must, subject to the rules, be treated equitably based on their commercial, legal, technical and financial abilities. They must not be discriminated against due to their size, degree of foreign affiliation or ownership, location or the origin of their supplies.

There is also a requirement that officials should not apply procurement practices that unfairly discriminate against SMEs so that they have an appropriate opportunity to compete for business. SMEs are Australian or New Zealand entities with fewer than 200 full-time equivalent employees. The Government’s policy is that agencies should source at least 10% of procurement by value from SMEs.

Defence supplies – Australian Industry Capability

The Australian Industry Capability (AIC) program has replaced the Australian Industry Involvement (AII) Program. Unlike the AII Program, the AIC Program does not support offsets.

Defence procurement policy requires AIC Plans for all contracts valued at A$20 million or more, or where a specific industry requirement is sought. The AIC Plan is to describe the cost-effective use of Australian industry in a contract, as well as any work that the contractor is required to perform in-country that delivers strategically important industry capabilities aligned to Australian Defence Force capability.

Free trade agreements

Australia is party to a number of free trade agreements, including the following.

ANZCERTA and Government Procurement Agreement

The Australia–New Zealand Closer Economic Relations Trade Agreement (ANZCERTA) is a comprehensive bilateral free trade agreement. It covers substantially all trans-Tasman trade in goods, including agricultural products, and was the first to include free trade in services.
Australia and New Zealand have also agreed the Government Procurement Agreement (GPA). The GPA is intended to enable Australian and New Zealand suppliers to compete for government work on an equal and transparent basis and so that Australian and New Zealand suppliers are treated as a single market of “local” suppliers.

**Australia-United States Free Trade Agreement**

The AUSFTA bans offsets and other local preferential arrangements for local content, technology transfer or export performance. Under the AUSFTA, the parties have agreed a principle of non-discrimination in government procurement (subject to some exceptions). Under this principle, the covered government agencies for each government are required to afford the suppliers, goods and services of the other country the same treatment that applies to domestic suppliers. There are some exceptions. Australia has reserved the right to maintain its Australian industry involvement program (or its successor) for defence procurement and to continue with procurement policies which assist SMEs. A similar non-discrimination principle is contained in several of Australia’s other FTAs. However, the AUSFTA was particularly significant, as when it entered into force, it resulted in several updates to Australian government procurement policies.

**Thailand-Australia Free Trade Agreement**

The Thailand-Australia Free Trade Agreement (TAFTA) entered into force on 1 January 2005. Most tariffs have now been eliminated, with a phasing to zero or elimination of the remaining tariffs by 2025.

**Singapore-Australia Free Trade Agreement**

The Singapore-Australia Free Trade Agreement (SAFTA) entered into force on 28 July 2008. SAFTA improves market access to services including education, the environment, telecommunications and professional services.

**ASEAN-Australia-New Zealand Free Trade Agreement**

The ASEAN-Australia-New Zealand Free Trade Agreement (AANZFTA) was concluded on 28 August 2008. Members of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar (Burma), Philippines, Singapore, Thailand and Vietnam.
AANZFTA provides for the progressive reduction or elimination of tariffs over specified periods and the scheduling of market-access commitments for services by each of the parties. The timetables for the reductions are different for each signatory. AANZFTA also provides for regional rules of origin.

**Australia-Chile Free Trade Agreement**

The Australia-Chile Free Trade Agreement (ACFTA) entered into force on 6 March 2009. ACFTA resulted in the immediate elimination of tariffs on 97% of goods traded between Australia and Chile. Tariffs on all existing merchandise traded between Australia and Chile will be eliminated by 2015.

**Malaysia-Australia Free Trade Agreement**

The Malaysia-Australia Free Trade Agreement (MAFTA) was signed on 22 May 2012. MAFTA entered into force on 1 January 2013.

Under MAFTA, Malaysia will eliminate tariffs on 97.6% of goods imported from Australia from day one, rising to 99% in 2017. Australia eliminated all tariffs on goods from Malaysia on day one.

**Australia-US Defense Trade Cooperation Treaty**

The Treaty creates a framework for trade in eligible defence articles between approved entities in Australia and the United States, known as the Approved Community, without the need to apply for export licences.

**Korea-Australia Free Trade Agreement**

The Korea-Australia Free Trade Agreement (KAFTA) entered into force on 12 December 2014.

Under KAFTA, 84% of Australia’s merchandise exports to Korea, by value, enter duty free, rising to 99.8% when the KAFTA is fully implemented.

For Korean investment into Australia, KAFTA raised the screening threshold at which private Korean investment in non-sensitive sectors is considered by the Australian Foreign Investment Review Board (FIRB).
Japan-Australia Economic Partnership Agreement

For exports from Australia, JAEPA provides reduction and removal of tariffs and duty free quotas across a number of agricultural and dairy products. Additionally, 99.7% of Australia’s exports of resource, energy and manufacturing products will enter Japan duty-free.

For imports to Australia, JAEPA provides cheaper import prices on a range of goods, including cars, white goods and electronics.

JAEPA also provides market access benefits to several services areas including educational, telecommunications and professional services.

For Japanese investment into Australia, JAEPA raised the screening threshold at which private Japanese investment in non-sensitive sectors is considered by FIRB.

China-Australia Free Trade Agreement

ChAFTA will provide for removal of a number of tariffs on Australian exports to China of food and agricultural, resources and energy, pharmaceutical and other manufactured products. ChAFTA will also facilitate market access across a range of service sectors.

For Chinese investment into Australia, ChAFTA will promote further growth of Chinese investment into Australia, by raising the screening threshold at which investments in non-sensitive sectors by private sector entities from China are considered by FIRB.

Trans Pacific Partnership Agreement (TPP)

Australia signed the TPP in February 2016 which, if implemented, will see the elimination of 98 per cent of tariffs among the 12 member countries (Australia, Brunei, Canada, Chile, Japan, Malaysia, Mexico, Peru, New Zealand, Singapore, the United States and Vietnam).
Negotiations for further free trade agreements

Australia is negotiating a number of other free trade agreements, namely those set out below.

Australia-Gulf Council Free Trade Agreement (AGCCFTA) negotiations with the Gulf Cooperation Council commenced in July 2007 (the GCC comprises Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates).

Australia and India launched negotiations to conclude a Comprehensive Economic Cooperation Agreement in May 2011. The agreement would include coverage of investment and trade in goods and services.

The Pacific Agreement on Closer Economic Relations (PACER) Plus negotiations offer an opportunity to help Pacific Islands Forum countries benefit from enhanced regional trade and economic integration. Pacific Islands Forum Leaders launched negotiations on PACER Plus at their fortieth meeting in August 2009. Participants in the PACER Plus negotiations in addition to Australia are Cook Islands, Federated States of Micronesia, Kiribati, Nauru, New Zealand, Niue, Palau, Papua New Guinea, Republic of Marshall Islands, Samoa, Solomon Islands, Tonga, Tuvalu and Vanuatu.

The Regional Comprehensive Economic Partnership (RCEP) negotiations were launched by leaders from ASEAN and ASEAN’s FTA partners in Cambodia in November 2012. RCEP is an ASEAN-centred proposal for a regional free trade area, which would initially include the ten ASEAN member states and those countries which have existing FTAs with ASEAN (Australia, China, India, Japan, Republic of Korea and New Zealand). The RCEP will build on and expand AANZFTA.

Australia with the United States and the European Union, is leading negotiations on a services-only free trade agreement known as the Trade in Services Agreement (TiSA). Formal TiSA negotiations began in early 2013.
Government incentive schemes for exporting

Governments at both the Federal and State/Territory levels aim to foster economic growth and improve Australia’s balance of payments position through assistance to selected business enterprises. This may be provided by direct grants or loans, concessions available under taxation legislation, through administrative, research and educational assistance, through restrictions on competition and other measures.

Export Market Development Grants

Through the Export Market Development Grants (EMDG) scheme, the Australian Trade Commission provides an incentive to small and medium Australian exporters of goods, services, industrial property rights and know-how that are substantially of Australian origin.

Under the scheme, taxable cash grants are available to subsidise certain expenditures incurred primarily for the purpose of creating or seeking opportunities, or creating or increasing demand, for export sales of eligible goods, services, industrial property rights or know-how.

Classes of eligible expenditure include overseas market research, certain overseas transport costs, establishment and maintenance of overseas sales representatives, advertisements (such as brochures) for overseas distribution, overseas promotions such as trade fairs and exhibitions, costs involved in training overseas grants in Australia, and costs related to quotations and tenders for overseas export business.

Export insurance and finance

The Australian Trade Commission, through the Export Finance and Insurance Corporation, provides insurance against commercial and political risks and assistance with arranging financing for exports and related overseas transactions. Commercial and political risks covered include bankruptcy of the buyer, indemnification against non-payment of goods by the buyer which have been accepted after the due date for payment, repudiation by the buyer under an enforceable contract and political risk insurance.
Manufacturing in Bond

The Government announced the introduction of the Manufacturing in Bond program (MiB) in December 1997 in order to allow the manufacturing of goods in a Customs-licensed warehouse using imported components on which duty has not been paid. A firm with MiB approval will be able to import dutiable goods into a licensed warehouse free of duty and sales tax. If the goods are later re-exported, either in their original or manufactured form, no duty or sales tax liability is incurred.
Real Property and Environmental Law

Introduction to estates in land

An estate in (or title to) land describes the type and quality of interest which may be held by a person in respect of that land.

In general, the most common estates in land are freehold estate and leasehold estate. These are discussed below, as is the further development of freehold (and in some cases, leasehold) estates in “strata title”. In addition, recent case law in Australia has enshrined the existence of “native title”, which describes certain rights held by indigenous Australians in respect of traditional land and water.

Freehold estate

Freehold estate is the most unrestricted interest in land that is available. A freehold estate is the most widely held interest in land, granting the freehold owner an interest in land for an indeterminate period of time.

There are two primary forms of freehold estate, “fee simple” and “life estate”.

Fee simple

The most common form of freehold estate is an “estate in fee simple”. Ownership of a freehold estate in fee simple is the most unrestricted form of ownership that exists in Australia and comes as close as possible to absolute ownership; that is, the grant of an estate of land in perpetuity, enabling the owner to enjoy possession without interference from others. An owner of an estate in fee simple is free to deal with that land as they choose, subject to complying with all relevant legislation as to ownership and use. Where the owner is an individual (rather than a body corporate), their fee simple estate will be transferred to an heir if the owner dies without having prepared a will (that is, dies intestate).

Life estate

This form of freehold ownership entitles the owner to use and possess land for his or her life. Ownership of the land reverts back to the person granting the right (or his or her descendants, if applicable) at the death of the person to whom it is given. The grant of this type of freehold estate is rare in Australia.
Leasehold estate

Leasehold estate is an interest in land which entitles the holder (known as a tenant or lessee) to exclusive occupation and use of the land for a limited period of time. At the end of the term of the leasehold estate, the right to occupy and use the leased estate or premises reverts to the owner of the freehold estate.

The leasehold estate is granted by virtue of a lease agreement entered into between the owner of the underlying freehold title and the tenant. Subject to complying with the terms of the lease, the tenant enjoys exclusive use and occupation of the leased land for the term of the lease.

The lease confers an interest in land on the tenant, not merely a contractual right. This entitles the tenant to rights granted to those with interests in land; perhaps most importantly, the right to specific performance as a remedy for default, not merely damages.

The majority of leasehold estates in Australia are of partial interests in a building, such as the right to occupy certain premises in a retail centre, commercial office building or on an industrial estate. These are discussed further in the section “Leases and Licences to Occupy”, below.

Federal, State and Local Governments, and other public authorities or bodies created by statute, also lease parcels of land in their ownership to third parties. Often, the land subject to this type of leased estate is considered to be special or strategic in some way, such that the authorities consider it prudent to ensure that the land can revert back to them at the end of the term of the lease. An example in this category is land which surrounds strategic defence positions, Australian icons or the country’s airports, harbours and ports.

Strata Title

In Australia, a category of legal estate in land has evolved to effectively manage community living issues. Generally known as “strata title”, “unit title” or “lot”, it is commonly found in apartments, condominiums, home units, townhouses and other group housing arrangements. It is also used to regulate ownership of partial estates in some commercial buildings and industrial estates.

Each State has its own legislation regulating some type of strata title system. Each State takes a slightly different approach, however, generally upon strata subdivision of a building or parcel of land (called a “strata scheme”), a freehold strata title conferred under the Torrens Title System can be freely transferred
in the same manner as freehold estate in fee simple. Each owner in a strata scheme is a member of an owners’ corporation, which has powers, authorities, duties and functions imposed upon it in relation to the control, management and administration of common property. A strata scheme also adopts a list of by-laws (through adopting the statutory list of by-laws which can be adapted to suit the strata scheme) which govern how each owner may use his or her property.

**Strata estate in leasehold**

In addition to these categories, New South Wales also permits strata schemes to be created on certain leasehold land under the *Strata Schemes (Leasehold Development) Act 1986* (NSW). Some different considerations apply in considering whether leasehold land is suitable for conversion to strata estates in leasehold.

**Native Title**

A further type of title in Australia is Native Title. Native Title is the term used to describe certain rights held by indigenous Australians in respect of traditional land and water. First recognised by Australia’s High Court in the 1992 decision of *Mabo v State of Queensland No 2*, it was held that the Meriam People (of whom the claimant was a member) held native title to certain land that survived European settlement, subject to the sovereignty of the Crown.

This case prompted the Australian Government to pass new Commonwealth legislation, the *Native Title Act 1993* (Cth), which took effect from 1 January 1994. Each State subsequently enacted their own legislation in various forms, governing the validity of land dealings affecting native title and establishing a process for native title claims.

Though still a developing area of law, the following are some recognised principles which apply in relation to native title claims:

- Native title can only exist in relation to land or water where the claimant group has and maintains a traditional connection with the land, and where the Government has not granted any inconsistent rights.

- Native title therefore cannot exist in relation to freehold land or in certain land leased from the Government for commercial premises or in respect of which exclusive possession has been granted. In these cases, the Government is deemed to have granted rights which are inconsistent with, and effectively extinguish, a native title claim.
Native title interests are most likely to affect investments in vacant land or mining interests, especially where the investment relies on a government grant or sale.

A register of native title interests is kept. Searches may be obtained from relevant courts and the National Native Title Tribunal to establish whether a parcel of land is subject to a native title claim or interest. If a native title claim exists or has been registered over land, an investor will have to follow procedural requirements under the native title legislation and negotiate agreements with the claimants or native title holders, such as access sharing arrangements or payment of compensation.

Native title generally is not an issue of concern where an investor is purchasing urban real estate interests. These interests are almost invariably comprised of freehold land, and native title cannot exist in relation to freehold land.

**Torrens Title: Title by registration**

Most land in Australia is subject to a system of conveyancing called the Torrens System. The fundamental premise of the Torrens Title System is a prioritisation of interests in a parcel of land by chronology of registration, not execution. In other words, it is a system of title by registration. Upon registration, the registered proprietor holds its interest subject to prior registered interests, but free from any interest which is not so registered.

**State guaranteed title: Administration**

Land for which title is recorded in the Torrens Title System is known as Torrens Land. Once registered, the registered proprietor’s interest in Torrens Land generally cannot be overturned or challenged. In Australia, this concept is known as indefeasibility of title. There are some limited statutory exceptions, such as fraud, misdescription of boundaries and short-term leases (or leasehold interests generally in Victoria). However, in principle, Torrens Title is guaranteed by the State.

Each State has its own central registry kept by a government authority (Titles Office). While there are differences in the administration of each Titles Office, they share the same fundamental principles of the Torrens Title System, primarily that title or ownership is determined by the act of registration at the Titles Office. As such, under the Torrens Title System, the holder of an unregistered interest has an equitable interest only in the land, and will lose priority to subsequently registered interests.
To enjoy the protection of indefeasibility of title, transfers of land, easements, mortgages, covenants and similar interests must be registered at the relevant Titles Office. On the sale of Torrens Land, a prescribed form of transfer of land, signed by the seller and by or on behalf of the buyer, will be registered at the relevant Titles Office. Certain leases are also required to be registered in some States. These interests are recorded on the certificate of title to the relevant property.

**Interests in land recorded in the Torrens Title system**

In Australia, there are several other recognised interests in land which should be registered on the title to the applicable land and incidentally, recorded in the Torrens Title System.

**Mortgages**

As is common worldwide, a mortgage is typically created in favour of a party (often a financial institution, but also any third-party lender) to secure payment of a loan or other financial arrangement.

When land is purchased with funds obtained from an institutional lender, the lender usually will attend completion and take responsibility for registering the transfer of the land as well as the mortgage granted to them by the buyer, and then (in those jurisdictions which still issue paper titles) will hold the duplicate certificate of title to the land for safe-keeping. This provides the lender with comfort that its consent must always be granted to the registration of any other interest in that parcel of land.

**Easements**

Easements generally create a right to use land or particular parts of it, rather than a right to occupy that land. There are many different forms of easement, which generally grant rights to third parties (often an adjoining land owner, a local authority or utilities provider). Commonly registered to procure the delivery of services (electricity, water and sewerage) to or across one piece of land to another, easements can also grant other rights, such as a right of way enabling third parties (with or without vehicles, depending on the terms) to cross a parcel of land.
**Covenants**

Similar to easements, covenants generally require an owner to use, or prevent that owner from using, all or part of their land in a particular way. For instance, a restrictive covenant may prevent an owner from building over a particular part of its land, so that services laid under that land may continue to be freely accessed by the authority who laid them. Similarly, a restrictive covenant may be recorded on title which restricts the type of dwelling or building materials that can be used on that parcel of land. Such a covenant is commonly found when a parcel of land is subdivided into several residential or industrial lots as part of a new development.

Likewise, a positive covenant may require an owner to do certain things, such as to ensure that a shared driveway is maintained, or that underground tanks are regularly checked and maintained.

**Leases**

While a lease is the grant of an interest in land, each State takes a different approach as to whether and when a lease is required to be registered at the Titles Office. Further details are set out in the section “Leases and Licences to Occupy”, below.

**Non-Torrens land: Commonwealth, Crown and Old System land**

The vast majority of land in Australia is Torrens Land. It would be rare to find land in a central business district of any city which is not recorded in the Torrens Title System. However, some areas of land have not yet been converted to Torrens land, the main categories of which are the following:

- **COMMONWEALTH LAND** Land owned by the Commonwealth of Australia (that is Federal, rather than State ownership). Depending on the use of the Commonwealth land, it may be leased by the Commonwealth to third parties.
- **CROWN LAND** Land owned by a particular State or Territory. Depending on the use of the Crown land, it may be leased by the Crown to third parties.
- **OLD SYSTEM LAND** Land which has been the subject of a Crown Grant by the State and for which title is evidenced by deed following the practice of old English land law prior to 1886. The deeds to Old System land are also recorded at the Titles Offices in the General Registry of Deeds. However, title under this deeds system is
not guaranteed by the State and therefore does not have the protection of being indefeasible.

With few exceptions, the majority of remaining Old System land is rural land or land which has been rarely transferred or dealt with and therefore has not undergone the conversion procedure to Torrens land. The conversion process, through a procedure of applications and public notices, involves determining the boundaries of the parcel of land and investigating the Old System Title’s documentation to ensure that the current owner has an unchallenged right to own the land.

**Leases and licences to occupy**

In Australia, arrangements between landlords and tenants are primarily governed by lease and licence documentation. These documents, especially those used by institutional landlords, contain detailed provisions which regulate the relationship between the landlord and the tenant.

There is also an overlay of rights and obligations which are created by statute, as well as by the common law.

**RETAIL LEASES** Most States have enacted retail lease legislation, to enshrine certain statutory protections upon retail tenants who are considered to have little or no bargaining power against institutional landlords.

**COMMON LAW** Common law implies certain covenants into leases, whether or not they are expressly stated in the lease. Commonly, leases are drafted to incorporate these implied covenants, however the covenants are also enshrined in property or conveyancing legislation in most States.

**CONSUMER PROTECTION** Consumer protection legislation, including protection against misleading conduct or misrepresentations.

**WORKPLACE HEALTH AND SAFETY** Both landlords and tenants are subject to workplace health and safety legislation governing the provision of a safe place of work. Primarily this affects the landlord through its capacity as owner of the building premises, and the tenant through its capacity as employer, or person in “control” of the workplace.
Leases

Unlike a simple contractual arrangement, leases in Australia bestow upon the tenant a legal interest in land, as well as granting contractual rights against the landlord. The grant of a lease gives the tenant the exclusive right to occupy and to use the leased area, which (except to the extent agreed in the lease) overrides the landlord’s rights as owner.

Being an interest in land, the tenant’s redress against a landlord’s default includes the right to seek specific performance as well as damages.

There are two primary categories of leasehold estate.

**FIXED TERM** The most common form of leasehold for commercial leases, a fixed-term lease is for a defined period of time, after which it lapses. For a fixed-term lease to be enforceable, the start date and end date of the lease must be known (or at least able to be determined) before it commences.

As with any leasehold estate, the premises or property that is the subject of the leasehold estate should be clearly defined or able to be clearly defined, and there should also be sufficient certainty about the terms of the lease.

**PERIODIC** A tenancy known as a periodic tenancy is created when a lease is granted on a weekly, monthly or yearly basis. Generally, such a lease can be ended by either the owner (landlord) or the occupant (tenant) giving the agreed period of notice.

Many fixed-term leases are converted to periodic tenancies once they reach their end date, in circumstances where the occupant continues to remain in the premises with the owner’s consent. In most commercial leases, the term of a periodic tenancy created in these circumstances will be month to month.

In addition to fixed-term and periodic tenancies, there are two further categories of leasehold interest:

- tenancy at will, which is for an indefinite period of time and may be terminated by either party at any time; and

- tenancy at sufferance, which arises by implication of law and is most commonly created where a tenant remains in possession after the expiry of a lease without the landlord’s consent or dissent (for example if the lease does not contain any provision for holding over).

In both cases, acceptance of rent by the owner will convert the tenancy to a periodic tenancy.
**Commercial leases**

Commercial leases are commonly net leases, that is, the tenant pays an agreed rent (subject to increase on agreed terms) as well as a contribution to the landlord’s operating expenses for the building. The proportion of the tenant’s contribution to operating expenses generally is calculated by reference to the proportion (expressed as a percentage) the lettable area of the tenant’s premises bears to the total lettable area of the building.

Sometimes, the rent agreed with a tenant comprises a notional amount for operating expenses, based on the operating expenses that were payable by the landlord in a given base year. In these cases, the tenant’s contribution to a proportion of operating expenses is limited to any increases in actual operating expenses payable in a lease year above those which were paid in the base year.

The term of a commercial lease for an office premises is usually between five and 10 years, with or without rights to extend. For industrial premises, the term may be longer especially if the industrial premises were purpose-built.

For major retail leases, such as those to anchor supermarket or department store tenants, lease terms significantly exceed 10 years and generally include a series of rights to extend, sometimes to a total of 40 years.

**Retail leases**

The States treat retail leases to smaller tenants differently to commercial leases, based on an assumption that retail landlords and retail tenants have very unequal bargaining power. Each State and Territory has enacted retail lease legislation.

The retail lease legislation differs between States, including as to what falls within the category of a “retail lease” in that jurisdiction. One of the primary criticisms made by both national landlords and national tenants of the retail lease legislation in force in Australia is its lack of harmonisation. To date, the States have not been able to collectively address these issues, leaving landlords and tenants in the position of having to comply with different regimes throughout Australia’s various States and Territories.

All States and Territories share the common objective of legislating to ensure that retail tenants are entitled to certain minimum conditions which override any provision to the contrary in a lease. Some States are similar in their treatment of large retail tenancies (1000 sqm or greater), rendering them outside the classification of a “retail lease” and therefore unable to rely on the legislative protection granted to smaller tenancies.
Registration

In certain circumstances it is necessary (or at least prudent) to register leases on the title to the property, to ensure that the tenant who has been granted an interest in the land via the lease also enjoys the protection of indefeasibility of title.

The criteria for registration varies between the States. As a guide to best practice:

- New South Wales, Queensland, Northern Territory, Tasmania and Australian Capital Territory – when the duration of the lease (including any options for renewal) exceeds three years the lease should be registered. (Noting that NSW legislation actually requires the landlord (owner) to execute a lease in a form suitable for registration where the term (including options) exceeds three years);
- South Australia – when the duration of the lease (including any options for renewal) exceeds one year the lease should be registered;
- Western Australia – when the duration of the lease (including any options for renewal) exceeds five years the lease should be registered; and
- Victoria – it is not necessary to register leases for any term to a tenant in actual possession given the breadth of the exception to indefeasibility.

Licences

Occupancy or other use rights are sometimes granted by licence, rather than lease. A licence is a contractual arrangement between the licensor (the grantor) and the licensee (the person with the benefit of the grant). Unlike a lease, it does not bestow an interest in land, meaning that remedies for breaches of the licence are limited to damages.

Institutional land owners generally prefer that certain rights are granted to its building occupants by way of separate licence, rather than in their premises lease, for instance, car park use rights, storage space use rights, and access to and joint use of non-leased areas for telecommunications equipment.

Often, a licence is the most appropriate form of occupancy right because the particular licensed areas are not exclusively occupied or used by the tenant, and therefore cannot be the subject of a lease which grants an interest in land bestowing exclusive occupation rights to the tenant. As such, for multi-tenanted commercial office buildings, it is quite common for the owner to grant a lease and one or more licences to its occupants.
Because they do not bestow interests in land, licences are not registrable under the Torrens Title system.

**Duties**

Previously, a significant cost imposed on a tenant when entering into a lease was lease duty. Lease duty was calculated on the estimated rent payable for the term of the lease, and on any statutory outgoings to which the tenant was liable through its contribution to building operating expenses. The particular rates of lease duty varied significantly between States. However, all States and Territories have now abolished lease duty on commercial leases with some exceptions. For example:

- in the Australian Capital Territory the grant of a lease with a term greater than 30 years including any renewal options are liable to duty at conveyance rates; and
- in all jurisdictions, duty will be charged on the grant of a lease for which any consideration other than rent reserved is paid or agreed to be paid, either in respect of the lease or the acquisition of certain rights or interests pertaining to the underlying land (for example where an up front “premium” is paid for the grant of the lease).

**Green Building credentials**

The Commonwealth Government has launched a Commercial Building Disclosure (CBD) program to focus on improving the energy efficiency of Australia’s large office buildings.

From 1 November 2011, under the Commonwealth Government’s *Building Energy Efficiency Disclosure Act 2010* (Cth) a constitutional corporation who wishes to sell, lease or sublease office space of 2,000 square metres or more net lettable area is required to disclose an up-to-date Building Energy Efficiency Certificate (BEEC). A BEEC must include:

- a NABERS Energy star rating for the building; and
- an assessment of tenancy lighting in the area of the building that is being sold or leased.

In June 2016, the Commonwealth Government announced a move to lower the mandatory disclosure threshold on commercial office buildings from 2,000 square metres to 1,000 square metres, effective from 1 July 2017. This means that a constitutional corporation who wishes to sell, lease or sublease office space of 1,000 square metres or more after 1 July 2017 will need to obtain a BEEC.
BEECs are valid for 12 months and must be publicly accessible on the online Building Energy Efficiency Register. Certain exceptions and exemptions apply.

The National Australian Built Environment Rating System (NABERS) is administered by the NSW Government, but available nationwide. The focus of NABERS is on the operation of existing buildings, and can be used for the whole building or specific tenancies. It has separate tools to assess energy use (called “NABERS Energy”, the most commonly used NABERS rating tool), water use, waste and indoor environment quality. While initially developed for office buildings, NABERS has also developed rating tools for residential houses, hotels and retail buildings. NABERS is also developing tools for schools, hospitals and transport.

The NABERS Energy rating benchmarks the actual operational energy use of existing commercial office buildings, measuring the energy use per m² of net lettable area. Each building is awarded from one star (for poor performance) to six stars (for exceptional performance) depending on the energy efficiency and greenhouse performance of the rated space. Data must be collected for a period of 12 months before an assessment can be made.

The Green Star Rating system is a system developed by the Green Building Council of Australia. It is also widely used in Australia and is typically used to assess the sustainability of the building design (as opposed to actual operational energy use) for a new building. It considers nine criteria, including energy, emissions, transport, water, materials and indoor environment quality.

The Property Council of Australia (Australia’s national organisation of building owners and managers) will only award a new office building “Grade A” or “Premium” status if the building obtains certain ratings under both Green Star and NABERS Office Energy. The “Grade A” or “Premium Grade” status is important for encouraging tenants concerned about their own energy consumption to lease space.

In addition, Federal and some State governments have set minimum rating standards for buildings owned or leased by government agencies. A summary of these requirements for office buildings is set out in the table below.

Note: In addition to the above Energy Ratings, there are also ratings for water, waste and environment, with different take-up levels across the states.

**Smoking prohibition**

Smoking in public places, including office buildings, has been banned by Parliament.
Environment and land-use planning

Traditionally, land use planning and environmental matters have been the jurisdiction of State and Local governments (except where directly regulated by international treaty arrangements ratified by Australia). In recent years, the Federal Government has been increasingly involved in environmental matters – especially in the area of climate change and renewable energy – although the Federal Government is in the process of devolving the regulation of some of its planning powers to the States.

Planning

State governments and local councils primarily control the development and use of land throughout Australia, through a combination of legislation and planning policies and instruments. The regulatory framework differs from State to State, and from council to council.

Councils generally regulate, assess and approve the majority of developments within their local government boundaries, with the following two exceptions:

- Projects of regional or State significance or major developments and infrastructure projects can fall within the jurisdiction of the particular State government. In most States, certain projects, categories of projects or development sites are designated as State significant projects by various planning instruments or by declaration of the relevant Minister for Planning. Projects that fall within these categories will be assessed by the relevant Planning Department within the State government and be approved by the relevant Minister for Planning or a special panel or commission established to assess and approve such State significant projects. Different assessment and approval requirements will apply to those projects assessed at the State level, compared to smaller developments assessed and approved at the local level.

- Projects that may have an impact on matters of national environmental significance, such as world heritage items, may require referral to the Commonwealth Department of the Environment as part of the State or regional-based assessment process.
At a State level, environmental planning policies establish broad guidelines and requirements for projects within certain categories of development or within certain areas of the State which are considered to be of state or regional significance. These state environmental planning policies may:

− suspend the operation of local planning laws for those particular projects;
− provide guidelines for councils in conducting assessments of those projects, or provide for referral of projects to the particular State government; or
− confer council’s functions as an approval authority to regional bodies for approval or for the imposition of conditions in addition to those conditions imposed by the Local Council.

At a local level, local environmental plans designate zones for all land under a council’s jurisdiction (for example residential, commercial, industrial and the like, with further divisions within each category), and then prescribe the types of development that will be permitted or prohibited within each zone. Where development is permitted, the local environmental plans also determine the type of approval required. Generally, very little development is permitted without some type of consent. Some councils have also implemented development control plans which contain further guidelines for development in particular zones.

State significant projects and other projects which are likely to have a significant environmental impact may require an Environmental Impact Statement (EIS). An EIS is a detailed technical document, often requiring input from a variety of experts. Depending on the nature of the project, these may include engineers, quantity surveyors, planners, ecologists, geologists, traffic management experts and the like. The preparation of an EIS often involves consultations with the relevant local council, relevant State government departments, stakeholders and the local community.

Carrying out any development without first obtaining the required consents is a criminal offence, and can result in the imposition of substantial penalties against not only the companies involved but also their individual directors.
Use and consents

Development consent: construction certificate
As well as obtaining consent to the proposed development, consent must also be obtained before any building works may commence. Again, the requirements vary from State to State and from council to council, but common to all is the requirement for detailed construction (and in some cases, landscaping) plans and specifications to be submitted to council (or a private certifier in some cases) for consideration. Once approved, the council (or private certifier) will issue consent documents – usually one giving general development approval, and the second permitting the commencement of construction in accordance with the approved plans. These will contain the conditions that must be met when carrying out the works.

These consents are also required for works undertaken in existing buildings including office towers, such as works to partition separate tenancies, to refurbish services to the building, or to refurbish parts of the building in general. Generally, the property manager for a particular building will manage this process for an institutional landlord, as the process can be quite time consuming and often the property manager’s relationship with particular officers at the council will assist in getting the proposals considered within a reasonable timeframe.

Occupancy certificate
Once obtained, building works must be completed in accordance with the consent documents and the conditions imposed by them. When this has been achieved, the council (or private certifier, in some cases) will issue an occupation certificate which enables the building or areas of new works to be occupied and used.

Essential services certificates
Annual certification of essential services is also a requirement in all States. Annual essential services certificates are designed as a means of ensuring that the building is safe, particularly in relation to fire safety issues. Again, the property manager for a particular building will generally ensure that the annual certifications are kept current.
Licences and permits

Depending on the nature of the use of the property, other annual licences may have to be obtained. For example, if a business uses hazardous materials or stores large quantities of fuel for use in back-up generators and the like, it must obtain and comply with a licence in relation to the storage, use and transportation of those materials.

Often, such licences or permits relate to the business operated by a tenant from the building, not the building itself. Accordingly, a building owner generally will, as a condition of the grant of a tenant’s lease, oblige the tenant to obtain and comply with all licences required for its use and occupation of the premises.

Workplace health and safety

In Australia, owners, managers and lessors of commercial properties have specific and strict liability obligations to ensure workplace health and safety (WHS).

Each Australian State is responsible for its own legislation in relation to workplace health and safety. In 2011 and 2012, most of the States and Territories undertook a process of national harmonisation of their state based legislation based on a model WHS Act developed nationally. However, Victoria and Western Australia have not enacted harmonised legislation.

The WHS legislation currently in place across the various States and Territories is generally comprised of:

- a general duty to ensure that a premises used as a workplace does not place a person’s health and safety at risk; and

- specific obligations to identify and eliminate (or control) WHS risks which may be present at a premises, such as the presence of asbestos or conditions making a manufacturing or industrial plant dangerous.

Throughout Australia, compliance with WHS legislation is taken very seriously, and significant penalties (for example, fines and imprisonment) can be imposed for breaching WHS legislation, especially where serious injury or death has occurred. Critically, it is not only the company which may be liable, but also its directors and managers.

In determining liability, the Courts will seek to apportion blame to those who had
control over events which caused the WHS risk. Therefore, it can be impossible for owners of commercial properties to contract out of these obligations (such as through a lease or a property management contract) when the WHS risk arises as a result of the building’s own design and plant.

Accordingly, it is increasingly common for owners of commercial premises to implement additional measures that seek to identify and eliminate (or control) the WHS risk at their premises. Typically, this is achieved by preparing a WHS Plan, which includes a requirement that regular risk assessments are completed on those areas of the building which remain under the owner’s control.

**Environmental law**

Environmental issues know no boundaries. Whether operating in the utilities, resources, manufacturing or waste management sectors or providing a portfolio of commercial properties for lease, most commercial uses of land in Australia are subject to the operation of a growing body of environmental law, violation of which may attract criminal and civil penalties.

**State legislation and agencies**

Through State-based legislation and environmental protection agencies (EPAs), each State regulates and manages systems for pollution control, contamination, hazardous materials, waste disposal and biodiversity protection.

While the States take different approaches in some areas regarding environmental matters, environmental laws share many common elements:

**POLLUTION CONTROL**
All States regulate the discharge of pollutants into the air, land and water. EPAs and other regulatory agencies generally require polluting industries and activities to obtain licenses, which establish limits on permitted discharge quantities for specific pollutants.

**HAZARDOUS MATERIALS**
Most States regulate the storage, use and transportation of hazardous materials and waste. Generally, any enterprise which generates, transports or treats waste requires a permit, as do operators of waste landfills.
State environment laws are actively enforced and the penalties imposed on offenders are influenced by the circumstances in which a violation occurred, including the intention of the offender and the severity of the harm caused to the environment. These penalties may be significant, especially where the harm is found to have been intentionally caused. Such penalties can exceed A$5 million in worst cases, and include imprisonment for individuals. Company directors and managers can be held directly liable for pollution offences committed by their corporation.

**Contaminated land**

Each State in Australia has its own regime regulating the notification, clean-up and remediation of contaminated land. The regimes differ from State to State, but generally, each jurisdiction uses a definition of contamination similar to “a condition of land or water where any chemical substance or waste has been added as a direct or indirect result of human activity at above background level and represents, or potentially represents, an adverse health or environmental impact.”

Usually the person who caused the contamination bears the primary responsibility for cleaning up contaminated land and groundwater. However, if the polluter cannot be found or has become insolvent, then the authorities may require the owner or occupier of the land to clean up the contamination. In some States, there is a greater risk to owners and occupiers of land, with some authorities having the power to require the owner or occupier to clean up the contamination, regardless of whether they caused the contamination.

As noted above, most States enable criminal prosecution for any contravention of environmental laws that result in serious environmental harm, including any pollution event that results in contamination. It is not an offence simply to own contaminated land, but it is an offence to fail to comply with a clean-up or remediation order issued by the relevant authority.

In a number of States, owners have an obligation to inform the relevant authority if they are aware of significant contamination on their land. Significant penalties can apply for failing to report known contamination, or even for failing to report contamination that an owner ought to have investigated and become aware.
Due to the potential liability for clean-up that may arise if the polluter cannot be found, it is important that purchasers of land, particularly land that is known to have been occupied by a hazardous industry, carry out environmental due diligence to determine whether the land they are acquiring is contaminated and assess the potential clean-up costs.

**Climate change and emissions trading**

The Federal Government ratified the Kyoto Protocol in December 2007 and its second commitment period in 2015, thereby drawing Australia into the existing Kyoto Protocol framework of mandatory emission reduction targets until 2020 and flexible mechanisms (including international emissions trading and carbon offset generation) with which to meet those targets.

The Federal Government has committed to a medium-term target to reduce emissions by 5% below 2000 levels by 2020 (equivalent to 13% below 2005 levels) under the second commitment period of the Kyoto Protocol.

The Federal Government also agreed in December 2015 to the terms of a new Paris Agreement to replace the Kyoto Protocol from 2020. That new climate change agreement will only open for ratification in 2016. As part of the process to agreeing to the Paris Agreement, the Federal Government committed to a long-term target to reduce Australia’s emissions by 26-28% below 2005 levels by 2030. This target may be revised prior to Australia ratifying the Paris Agreement.

Australia has national greenhouse and energy reporting legislation that requires controlling corporations of a corporate group which emits greenhouse gases in excess of 50 kilotonnes of carbon dioxide equivalent, or produce or consume 200 terajoules of energy or more are required to register and report annually to the Clean Energy Regulator.

Australia has previously introduced a national-level carbon price, the Carbon Pricing Mechanism (CPM), which commenced in 2012 but was abolished in 2014.

Following the repeal of the CPM, the Federal Government introduced the Emissions Reduction Fund which is a voluntary scheme whereby eligible carbon abatement projects are able to generate Australian carbon credit units (ACCUs) for purchase by the Clean Energy Regulator through periodic reverse auctions.
To ensure these emissions reductions are not displaced significantly by a rise in emissions elsewhere in the economy, the Emissions Reduction Fund includes a safeguard mechanism. The safeguard mechanism requires companies with operational control over facilities with direct (scope 1) emissions that exceed 100,000 tonnes of carbon dioxide equivalent per year (responsible emitters) to keep their emissions at or below a baseline set by the Clean Energy Regulator. Facilities covered by the safeguard mechanism may purchase and surrender ACCUs to offset any emissions over their set baseline. The safeguard mechanism commenced on 1 July 2016.

**Renewable energy**

Australia has a target for the uptake of renewable energy, which is to achieve 33,000 gigawatt hours of additional renewable electricity generation by 2020. This is to be achieved through the Federal Renewable Energy Target (RET).

The legislation implementing the RET requires that in each year electricity generators source a specified percentage of their electricity from renewable sources. The percentage increases each year.

Retailers discharge their obligation by surrendering a number of Renewable Energy Certificate (RECs) equal to the number of megawatt hours equivalent to their percentage. RECs are generated in respect of eligible renewable energy production, including wind, solar, biomass, bagasse and geothermal sources. RECs are tradeable and are typically sold by electricity generators as part of electricity offtake arrangements.

At a State level, governments have also introduced schemes to try and incentivise the development and implementation of renewable energy projects. This includes:

**VICTORIA**

In August 2015, the Victorian Government announced an initiative to source renewable energy certificates from new large scale projects in Victoria. The purpose of this tender is to try and increase the commercial viability of such large scale projects. In June 2016, the Victorian Government committed to a reverse auction scheme designed to allow Victoria to achieve renewable energy targets of 25% by 2020 and 40% by 2025. The scheme will see project developers compete to be the lowest cost provider, with the successful bids being awarded long term contracts to support their projects.
ACT

ACT has a reverse auction scheme for large scale wind and solar renewable projects. The scheme works by project developers bidding their projects into an auction, noting the MWh amount and a feed-in price that they would need to receive for the energy they generate in order to be viable. The ACT Government selects projects which are cost effective and have benefits to ACT. Selected projects sell energy into the national electricity market through a feed-in-tariff.

Queensland - has committed to the Solar120 program, whereby the Queensland Government will support up to 120 MW of projects by providing long term revenue contracts for solar projects that have successfully bid for ARENA (Australian Renewable Energy Agency) funds.

South Australia and New South Wales have also tendered for renewable energy projects to provide energy to public infrastructure, such as public transport.
Real Estate Investment Trusts
15. Real Estate Investment Trusts

General

A Real Estate Investment Trust (REIT) is a unit trust that provides investors with the opportunity to buy an interest in a professionally managed and diversified portfolio of income-producing commercial real estate under a tax transparent structure. REITs are often listed on a securities exchange, but also can be unlisted. Australia currently has the most highly securitised property market in the world with two thirds of the institutional-grade property being held in the form of a REIT. Australian REITs invest in a variety of commercial real estate sectors, including retail shopping centres, office buildings, industrial estates, hotels, warehouses and car parks.

Listed REITs are now one of the largest sectors on the ASX and constitute approximately 12% of the world’s listed real estate assets.

Australian REITs have made significant investments in foreign real estate in recent years, prompting debt and foreign exchange management to become increasingly sophisticated. Offshore investment has occurred principally in the US, UK, Japan, New Zealand, Singapore, Hong Kong and Europe.

REITs are structured as unit trusts with corporate trustees. Such trusts fall within the definition of a managed investment scheme under the Corporations Act 2001 (Cth) (Corporations Act) and are accordingly regulated by the Australian Securities and Investment Commission (ASIC).

Stamp duty is payable on the establishment of a REIT, on the acquisition of real property by the REIT and may also be payable on changes in ownership of interests in the REIT. Rates of duty vary between the eight Australian States and Territories. Stamp duty is discussed in further detail in Chapter 6, “Taxation” of this guide.

For the avoidance of doubt, the content of this Chapter 14 deals with registered schemes, except where otherwise indicated.
Registration of managed investment schemes

The Corporations Act requires that a REIT operated as a scheme must be registered with the ASIC if:

– it has more than 20 members; or
– it is promoted by a person who is in the business of promoting schemes; or
– it is offered to a retail client (colloquially referred to as a “mum or dad investor”).

Registration significantly increases a REIT’s establishment and ongoing compliance costs due to the statutory obligations imposed on operators of a registered scheme. For example, a regulated form of offer document - a product disclosure statement (PDS) - is required for any offer of units in the scheme to retail clients.

The trustee of a registered scheme is known as the responsible entity (RE). The Corporations Act regulates the activities of the RE and provides that the RE performs those functions conferred by the Corporations Act and the scheme’s constitution (the deed of trust, some of the contents of which are prescribed by the Corporations Act and ASIC policy).

The RE of a registered scheme must be a public company which holds an Australian financial services licence (AFSL) authorising it to operate the scheme. Refer to Chapter 15 of this Guide for a discussion of Australia’s financial services licensing regime.

The RE will usually appoint a related corporate entity to manage the assets of the REIT (the fund manager). The fund manager selects the investment properties and is generally responsible for all maintenance, administration, leasing and improvement of the underlying real estate investments.

The payment of fees relating to the operation of the scheme (including performance fees) is permitted under the Corporations Act, provided the fees paid comply with the terms of the constitution and are fully disclosed in any disclosure documents. Fees may be paid to the RE and/or to the fund manager out of the assets of the scheme. The payment of volume-based shelf-space fees to platform providers is prohibited under subdivision A of Division 5 of Chapter 7 of the Corporations Act.
Investment strategies

Investment strategies are generally described in the REIT’s offering documentation or constitution.

There are no minimum capital requirements for REITs and generally, there is no barrier to a REIT in investing in vacant land, property under development or major refurbishment, or mortgages. However, the trustee of the REIT should not carry on any development business or any other trading business from which it derives profits if it wishes to maintain its “flow-through” tax status and does not wish to be taxed as a company. Therefore, any development activity should be for the purpose of the REIT deriving rent from the developed property.

Subject to the terms of the offer document and the REIT’s trust deed, an Australian REIT may invest in property-related products such as mortgage-backed securities, securities of property companies or interests in other REITs.

The RE is permitted to acquire an interest in the REIT, provided that doing so would not disadvantage other members and that the interest is acquired for an amount that is not less than the amount payable by any other person. For a listed REIT, member approval is required to allow an issue of REIT securities to a related party, such as the RE, or a party whose relationship to the RE, in the opinion of the ASX, is such that member approval is required. Member approval is also required where the REIT wishes to acquire substantial assets from a related party (see the section, “Related-Party Transactions” in this chapter, below).

Rules applicable to assets

The RE must ensure that:

- the REIT property is clearly identified as such, and held separately from the RE’s own property and the property of any other scheme;
- the REIT property is valued at appropriate times in accordance with the REIT offer documentation and constitution; and
- all payments out of the REIT property are made in accordance with the REIT’s constitution and the provisions of the Corporations Act.

The RE is authorised to appoint agents to do anything which the RE is authorised to do in connection with the REIT. Commonly, the assets of a REIT will be held by a third-party custodian appointed by the RE. However, the RE will remain ultimately liable to investors for the proper administration of the REIT.
Disclosure requirements

Generally, offers of interests in a scheme require the preparation of a disclosure document. For example, the offer of an interest in a registered scheme under the Corporations Act requires the preparation and issuance of a PDS. A PDS must contain all information that investors would reasonably require in order to make a decision to invest, as well as other information prescribed by the Corporations Act. ASIC Regulatory Guides 45, 46 and 240 set out additional benchmarks and disclosure principles for mortgage schemes, unlisted property schemes and hedge funds that are open to retail investment.

By contrast, an offer of interests in an unregistered scheme will usually involve the preparation of a disclosure document referred to as an Information Memorandum (IM). An IM is a largely unregulated form of disclosure provided to “wholesale clients”, being high-net worth or institutional investors who are considered capable of making certain enquiries independently.

Governance of REITs

In addition to meeting the legislative requirements of the Corporations Act, REITs listed on a securities exchange must also comply with the rules of the relevant exchange.

For example, an ASX listed REIT must comply with the best practice recommendations set by the ASX Corporate Governance Council and must include a statement of corporate governance practice in each annual report.

Significant corporate governance issues

Duties of the responsible entity

The RE holds the REIT property as trustee on trust for its members, and therefore all the common law duties of a trustee apply to the RE. In addition, the Corporations Act imposes similar duties on the RE itself as well as duties on the officers of the RE. The overriding principle of these duties is to act honestly, efficiently, fairly and in the best interests of the REIT’s members.

Related-party transactions

The Corporations Act extends the provisions which deal with related-party transactions involving public companies to registered managed investment schemes, which include REITs.
A financial benefit cannot be given to an RE unless member approval has first been obtained (other than in certain specified exceptions). The RE is, however, allowed to pay itself fees and exercise rights to an indemnity in accordance with the scheme’s constitution.

The ASX listing rules require that the RE of a listed REIT must obtain member approval if it intends to acquire or dispose of a substantial asset (which is defined under ASX Rule 10.2 as being an asset the value of which is 5% or more of the equity interest of the REIT) from a related party and also require specific member approval of any issue of equity securities to a related party (with some specific exceptions).

**Members meetings**

The RE may call a meeting of the scheme’s members as it sees fit. The RE must call and hold a meeting of members to consider and vote on a proposed special resolution or proposed extraordinary resolution when requested to do so by members with at least 5% of the votes that may be cast on the resolution or at least 100 members who are entitled to vote on the resolution.

**Removal of the responsible entity**

The RE may retire voluntarily but must call a meeting of members to enable the members to choose a new company to be the RE of the scheme. The members of a scheme may remove the RE of a listed scheme by special resolution (where more than 75% of the votes are cast by scheme members entitled to vote) or in the case of an unlisted scheme, by an extraordinary resolution (more than 50% of the votes cast by scheme members entitled to vote).

**Compliance**

A registered scheme must have a compliance plan which identifies compliance risks and establishes an internal protocol to ensure that each risk is properly monitored and managed. The compliance plan ensures compliance with the Corporations Act and the scheme’s constitution.

The RE must also establish a compliance committee, unless at least half of the directors of the RE are independent external directors. The compliance committee must have at least three members, the majority of whom are external members. The compliance committee monitors compliance by the RE with each scheme’s compliance plan and oversees the implementation of the plan.
Governance of the responsible entity

In addition to the responsibilities imposed by virtue of its appointment as an RE, an RE, as a company, is obligated to comply with those requirements discussed in Chapter 3, "Forms of Business Organisation" and Chapter 4, "Companies and Securities Regulation", of this Guide.

REIT regime and foreign entities

An interest in a REIT is an interest in Australian land for the purposes of Australia’s policy on foreign investment. Accordingly, the discussion above in Chapter 2, “Foreign Investment – Government Policy” is also applicable to REITs.

Stapled securities

A REIT may be part of a stapled group, in which case an investor is exposed to a funds management and/or property management or development company as well as the real estate portfolio. The company undertakes the active business activities of the stapled group and the REIT holds the passive property investments to derive the rental income.

The conditions of the “stapling” are usually provided in a stapling deed to which the REIT and the company are both parties. Specific provisions are included in the constitutions of both the REIT and the company, respectively.

Taxation of foreign members of trusts

Assuming that a trust is not taxed as a company, the general position is that non-resident members will be subject to Australian taxation on their entitlement to the net income to the extent that the income has an Australian source.

The rate of tax applicable to non-resident members will depend on the nature of the relevant income or gain. For example, based on the Commissioner of Taxation’s current practice in relation to Australian source income which consists of dividends, interest or royalties, the income will be subject to Australian withholding tax at the applicable withholding tax rate. Interest income is generally subject to Australian withholding tax at the rate of 10% (although lower rates may be applicable under certain Australian double-taxation agreements).

Special rules apply in respect of the taxation of Australian source income and gains other than dividends, interest and royalties. These rules include provisions requiring tax to be paid by the responsible entity. The rate of tax applicable to the RE is generally the rate of tax applicable to the member (that is the marginal
tax rates for individual members). An RE of a managed investment trust (MIT) may be required to withhold tax at the corporate rate (currently 30%) on certain distributions to non-residents (not including distributions of interest, dividends and royalties and non-Australian source income). This is discussed in further detail in Chapter 6, “Taxation” of this guide.

The Government has recently introduced a new tax regime for trusts that are Attributed Managed Investment Trusts or AMITs, which are broadly MITs under the existing definition in the tax law (with some minor changes). The principal additional requirement to be an AMIT is that the interests of members in the trust are clearly defined at all times when the trust is in existence during the income year. Existing MITs will need to exercise a choice to adopt the AMIT regime. MITs that do not qualify for the new regime will continue to be taxed under the existing trust tax provisions discussed above.

Under the AMIT regime, there will be no change to the current MIT withholding tax rates. The MIT withholding tax regime will also be available to MITs whether they are AMITs or not.

Under the new AMIT regime, trust components (which include both taxable income and some non-taxable income) may be allocated or attributed to members of the trust on a fair and reasonable basis, rather than based on present entitlement to a share of the trust income as per the current tax law. In addition, the regime also introduces new rules such as, a formal system to allow errors in calculating taxable income to be rectified by making adjustments in the year they are discovered; the ability to make an irrevocable election to treat income and assets attributable to a class of units as a separate AMIT; cost base adjustment rules to increase as well as decrease the cost base of units for CGT purposes; and the treatment of the trust as a “fixed trust”, which has important consequences for the trust loss and franking provisions. The new regime has a 1 July 2016 start date, however there is an ability for trustees to elect into the AMIT rules retrospectively from 1 July 2015.
16. Financial Services Regulation

Chapter 7 of the Corporations Act 2001 (Cth) (Corporations Act) governs the licensing, product disclosure and general conduct in relation to the provision of financial services and the operation of financial markets in Australia. ASIC is the regulatory authority that has primary responsibility for administering and enforcing Chapter 7 of the Corporations Act.

The Corporations Act provides for a uniform licensing regime for all persons who provide financial services. It also provides a separate licensing regime for financial markets and clearing and settlement facilities.

Financial services licensing regime: Overview

The Corporations Act requires that a company that carries on a business that provides financial services in Australia must, unless an exemption applies, obtain an Australian financial services licence (AFS Licence). Each AFS Licence contains specific authorisation conditions that set out the financial services that the AFS Licensee is authorised to provide, the classes of financial products for which they may be provided, and the type of clients (wholesale client and/or retail clients) to whom they may be provided.

An AFS Licensee must make certain disclosures to clients when providing financial services. The level of disclosure required depends upon:

− the type of financial service provided; and
− whether the client is classified as a “wholesale client” or “retail client”.

Generally speaking, if foreign companies want to provide financial services in Australia, they will require an AFS Licence, unless they have the benefit of an exemption (see “Obtaining an AFS Licence” in this chapter, below).

Financial services

A person provides a “financial service” if they engage in any of the following activities:

− providing “financial product advice”, which is defined as a recommendation, statement of opinion or report that is intended to influence (or could reasonably be regarded as having intended to influence) a person in making a decision in relation to a particular financial product or class of financial products (or an interest in that product or class of products);
dealing in financial products, which is:

» applying for or acquires a financial product;
» issuing a financial product;
» in relation to securities or interests in managed investment schemes, underwriting the securities or interests;
» varying a financial product;
» disposing of a financial product; or
» arranging for any of the above, unless the person deals in the product on their own behalf or as an agent, in which case the principal will be deemed to be dealing in the financial product;

making a market in financial products, which occurs (subject to certain exceptions) when:

» a person regularly states the price at which they propose to acquire or dispose of financial products on their own behalf; and
» other persons have the reasonable expectation that they will be able to regularly effect transactions at the stated prices;

operating a registered managed investment scheme (see “Registration of Managed Investment Schemes” in Chapter 14, above); or

providing custodial or depository services, which occurs when a provider holds a financial product in trust for, or on behalf of, a client or its nominee.

Financial products
A “financial product” is a facility through which a person:

– makes a financial investment – such as subscribing for, or purchasing, shares, derivatives, interests in managed investment schemes, government bonds or other securities;

– manages financial risk – for example by taking out insurance or hedging a liability by acquiring a futures contract, entering into a currency swap arrangement or entering into a foreign exchange contract that is settled some time in the future; or

– makes non-cash payments – including payment by cheques (including travellers cheques), direct debit and deposit accounts and certain other payment facilities such as smart cards.
The following are specifically excluded from the definition of financial products:

− re-insurance and credit contracts (other than margin lending facilities);
− foreign exchange contracts that are settled immediately;
− an interest in an “unregistered” managed investment scheme that has 20 or less members, is not promoted by a person or an associate of a person who is in the business of promoting managed investment schemes and is not deemed to be closely related to another scheme with the result being that the schemes in aggregate have 20 or more members;
− credit cards, credit facilities (other than margin lending facilities) and letters of credit; and
− bank cheques and bank guarantees.

The Corporations Act also provides that if a financial product is a component of a broader facility that has other components, the AFS licensing regime only applies to the facility to the extent that it consists of the financial product.

**Obtaining an AFS Licence**

To obtain an AFS Licence, applicants must show ASIC that they:

− are competent to carry on the kinds of financial services business for which they are applying;
− have sufficient financial and organisational resources and expertise to carry on the business; and
− can meet certain other requirements imposed by law.

AFS Licence applications are made on a standard ASIC form and must be accompanied by the following Core Proofs:

**A5 PROOF**

Business Description – which must include an overview of the proposed financial services business and contain a chart showing the organisational structure of the business.

**B1 PROOF**

Organisational Expertise – which must contain descriptions of the qualifications and experience of the people who will be making the day-to-day business decisions of each aspect of the financial services business, who are known as responsible managers. The
B1 Proof must also include information concerning the procedures that the business will put in place to:

− ensure compliance with its AFS Licence conditions and other legal requirements;
− manage the outsourcing of key services such as legal, accounting and audit services;
− monitor, supervise and train its employees; and
− manage the risks associated with its financial services business.

PEOPLE PROOFS
Containing personal information about the proposed responsible managers to help ASIC assess organisational competence and whether the responsible managers are of good character.

B5 PROOF
Financial Statements and Financial Resources – which identifies the financial requirements which apply to the proposed financial services business and demonstrates to ASIC that the applicant can comply with the relevant financial requirements.

Once granted, each AFS Licence will specify the financial services the AFS Licensee is authorised to provide the classes of financial products for which the AFS Licensee is authorised to provide the services and the type of clients (wholesale clients and/or retail clients) to whom the services may be provided. For example, a standard stockbroker’s AFS Licence might authorise the broker to provide financial product advice, deal in a financial product and apply for, acquire or dispose of a financial product on behalf of another person for the following financial products:

− deposit and payment products
− derivatives
− foreign exchange contracts
− debentures, stocks or bonds issued, or proposed to be issued, by a government
− interests in managed investment schemes
− securities
− superannuation
− margin lending facilities
to retail clients and wholesale clients.
Ongoing AFS Licence obligations

The Corporations Act provides a number of ongoing obligations for AFS Licensees, which require them, at all times, to:

− do all things necessary to ensure that the financial services covered by the AFS Licence are provided efficiently, honestly and fairly;
− have in place adequate arrangements for the management of conflicts of interest;
− comply with the conditions on the AFS Licence;
− comply with, and take reasonable steps to ensure that its representatives comply with financial services laws;
− have available adequate resources (including financial, technological and human resources) to provide the financial services covered by the AFS Licence and to carry out supervisory arrangements;
− maintain the competence to provide the financial services;
− ensure that its representatives are adequately trained and are competent to provide the financial services;
− if the financial services are provided to persons as retail clients, to have in place a compliant dispute-resolution system;
− have adequate risk-management systems; and
− if the AFS Licensee is a foreign entity that is not a foreign company, always have an agent resident in Australia which is authorised to accept service of process and notices and notify ASIC of any change in contact details as required.

Exemptions from the need to obtain an AFS Licence

Generally speaking, financial services businesses must be licensed if they want to carry on business in Australia. However in many instances, businesses can avoid the need to obtain an AFS Licence by engaging an AFS Licensee to provide financial services as an agent on their behalf (this may have taxation implications and specific advice should be sought if you intend to rely on this exemption). Also, the Corporations Act specifies a number of circumstances where an offshore financial services provider does not require an AFS Licence even though it may be operating in Australia. These include (among others):

− Financial services provided to an Australian citizen or resident, where the offshore provider does not engage in conduct intended to or likely to induce people in Australia to use the service, and the service is provided offshore;
Financial services relating to products traded on a licensed market in Australia (in which the offshore provider participates), where the client is outside Australia (or the offshore provider reasonably believes this is so);

Financial services provided to AFS Licensees acting on their own behalf;

Financial product advice or dealing services provided by an offshore provider who is regulated by an overseas regulatory authority specified in writing by ASIC who is considered “sufficiently” comparable to ASIC (for example, the Securities Exchange Commission in the US, the Financial Services Authority in the UK, the Monetary Authority of Singapore, the Securities and Futures Commission in Hong Kong and the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin) of Germany);

Financial product advice or dealing services provided by an offshore provider where:

» the service relates to a financial product acquired in circumstances where the client initiated the contact with the offshore provider or when the client was not in Australia or supplements, or is of the same kind as and is substitution for such a financial product; and

» the offshore provider does not actively solicit persons in Australia in relation to the financial products;

Financial services provided to professional investors by an offshore provider from offshore and which consist of any or all of the following:

» dealing in derivatives or foreign exchange contracts;

» providing advice on derivatives or foreign exchange contracts; and

» making a market in derivatives or foreign exchange contracts.

There are certain other circumstances where ASIC will provide specific relief from certain provisions of the Corporations Act to allow offshore financial service providers to carry on business in Australia, including where the financial services are being provided through an authorised representative or intermediary.

Disclosure requirements for AFS Licence holders

AFS Licensees must provide prescribed disclosures when providing financial services to retail clients. This disclosure regime is based on three documents:

– the Financial Services Guide (FSG);

– the Statement of Advice (SOA); and

– the Product Disclosure Statement (PDS).
An AFS Licensee must provide an FSG to retail clients when it provides financial services to them. The FSG must include specified disclosures. In addition the FSG must contain sufficient information so that the client can determine whether to acquire the financial service from the Licensee.

An AFS Licensee must provide an SOA to retail clients when it provides personal advice to them. Personal advice is advice that considers the specific objectives, financial situation and needs of the client. The SOA must include specified disclosures and contain sufficient information so that the client can determine whether or not to act on the advice. It must disclose any interest in the service or product on which the AFS Licensee is advising (that might reasonably be expected to be capable of influencing the advice).

An AFS Licensee must provide a PDS (which is similar to a prospectus) for financial products (other than securities where a prospectus is required), if it issues, recommends or sells financial products to retail clients. The PDS must include specified disclosures and any other information that might reasonably be expected to have a material influence on the decision of a reasonable person, as a retail client, whether to acquire the financial product.

The disclosure regime outlined above relates only to the provision of financial services to retail clients. The regime relating to wholesale clients (including sophisticated investors) is much less rigorous.

**Retail and wholesale clients (including sophisticated investors)**

Financial services are provided to clients as “retail clients” unless they are provided to them as “wholesale clients”.

Financial services are provided to clients as “wholesale clients” if one or more of the following apply:

- the value of the financial product or service exceeds an amount specified by regulations made under the Corporations Act (which is currently A$500,000 and must include non-superannuation-sourced money);
- the financial product or service is provided for use in connection with a business that is not a small business (a small business is one that employs less than 20 staff, or in the case of a manufacturing business, less than 100 staff);
the client provides the AFS Licensee with a certificate that states that the client either has:

» net assets of an amount specified by regulations made under the Corporations Act (which is currently A$2.5 million or greater); or

» gross income over the last two financial years of an amount specified by regulations made under the Corporations Act (which is currently A$250,000 or greater per annum). If none of these pre-requisites apply, the financial product or service will be provided to the client as a retail client;

– the client is a “professional investor”; or

– the client is a “sophisticated investor”.

A client will be a “professional investor” for this purpose if one or more of the following apply:

– the person is an AFSL Licensee;

– the person is a body regulated by the Australian Prudential Regulation Authority (APRA), other than a trustee of any of the following within the meaning of the Superannuation Industry (Supervision) Act 1993 (Cth):
  » a superannuation fund;
  » an approved deposit fund;
  » a pooled superannuation trust; or
  » a public sector superannuation scheme;

– the person is a body registered under the Financial Corporations Act 1974 (Cth);

– the person is the trustee of:
  » a superannuation fund;
  » an approved deposit fund;
  » a pooled superannuation trust; or
  » a public sector superannuation scheme;

within the meaning of the Superannuation Industry (Supervision) Act 1993 (Cth) and the fund, trust or scheme has net assets of at least A$10 million;

– the person controls at least A$10 million (including any amount held by an associate or under a trust that the person manages);

– the person is a listed entity, or a related body corporate of a listed entity;

– the person is an exempt public authority;
the person is a body corporate, or an unincorporated body, that:

- carries on a business of investment in financial products, interests in land or other investments; and
- for those purposes, invests funds received (directly or indirectly) following an offer or invitation to the public, within the meaning of section 82, the terms of which provided for the funds subscribed to be invested for those purposes; or

the person is a foreign entity that, if established or incorporated in Australia, would be covered by one of the preceding paragraphs.

A client will be a “sophisticated investor” for this purpose if the AFS Licensee that is providing the financial product or service is satisfied that client has sufficient experience in investing in financial products and/or using financial services that allows the client to assess the:

- merits of the product or service;
- value of the product or service;
- risks associated with holding the product;
- client’s own information needs; and
- adequacy of the information given by the AFS Licensee.

The AFS Licensee must provide the sophisticated investor with a written statement setting out why it is satisfied of these matters, and the financial product must not be provided for use in connection with a business. Finally, the sophisticated investor must provide the AFS Licensee with written acknowledgement that the licensee:

- has not given the client a PDS or any other document that would be required if the client was a retail client (such as an FSG or SOA); and
- does not have any other obligations to the client as a retail client.

The definitions of wholesale client, retail client and sophisticated investor do not apply when the financial product being provided is an insurance or superannuation product, in which case the products are generally provided to persons as retail clients.

Dividend withholding tax only applies to the unfranked portion of a dividend. The franked portion of a dividend is exempt from withholding tax. Dividends which constitute conduit foreign income are not subject to dividend withholding tax.

Australia signed a revised tax treaty with Germany which, following its entry into force, will replace the existing Australia-Germany Tax Treaty signed in 1972. Under the revised treaty, the rates will be 0-15% for dividends, 0-10% for interest and 5% for royalties.
Appendix 2 — Personal rates of tax

Resident individuals
The tax rates for resident individuals are being progressively reduced as follows.

2016-17 INCOME YEARS

<table>
<thead>
<tr>
<th>Taxable income</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>A$0 – A$18,200</td>
<td>0%</td>
</tr>
<tr>
<td>A$18,201 – A$37,000</td>
<td>19%</td>
</tr>
<tr>
<td>A$37,001 – A$80,000</td>
<td>32.5%</td>
</tr>
<tr>
<td>A$80,001 – A$180,000</td>
<td>37%</td>
</tr>
<tr>
<td>A$180,001 and over</td>
<td>45%</td>
</tr>
</tbody>
</table>

The above rates do not include the:

- Medicare levy of 2% (resident individuals are generally liable to pay a Medicare levy on their taxable income); and
- Temporary Budget Repair Levy; this levy is payable at a rate of 2% for taxable incomes over A$180,000.

For low-income taxpayers a reduced levy or no levy may be payable. Individuals who do not have private medical insurance may be liable for an additional Medicare levy surcharge.

Non-resident individuals
The tax rates for non-resident individuals are being progressively varied as follows.

2016-17 INCOME YEARS

<table>
<thead>
<tr>
<th>Taxable income</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>A$0 - A$80,000</td>
<td>32.5%</td>
</tr>
<tr>
<td>A$80,001 - A$180,000</td>
<td>37%</td>
</tr>
<tr>
<td>A$180,001 and over</td>
<td>45%</td>
</tr>
</tbody>
</table>

The above rates do not include the Temporary Budget Repair Levy; this levy is payable at a rate of 2% for taxable incomes over $180,000.
Appendix 3 — Information exchange countries

- Anguilla
- Antigua and Barbuda
- Argentina
- Aruba
- Belgium
- Belize
- Bermuda
- British Virgin Islands
- Canada
- Cayman Islands
- China
- Cook Islands
- Czech Republic
- Denmark
- Fiji
- Finland
- France
- Germany
- Gibraltar
- Guernsey
- Hungary
- India
- Indonesia
- Ireland
- Isle of Man
- Italy
- Japan
- Jersey
- Kiribati
- Macau
- Malaysia
- Malta
- Mauritius
- Mexico
- Myanmar
- Netherlands
- Netherlands Antilles
- New Zealand
- Norway
- Papua New Guinea
- Poland
- Principality of Monaco
- Republic of Korea
- Romania
- Russia
- Saint Kitts and Nevis
- Saint Vincent and the Grenadines
- Slovakia
- South Africa
- Spain
- Sri Lanka
- Sweden
- Taipei
- Thailand
- The Commonwealth of the Bahamas
- The Republic of San Marino
- The Republic of Singapore
- Turks and Caicos Islands
- United Kingdom
- United States of America
- Vietnam

The countries listed in the table above are specified as information exchange countries. A reference to a country in the table is a reference to the country to the extent to which it is described in the relevant Double Tax Agreement (or other international agreement) Australia has with the country.

Australia has also concluded exchange of information agreements with Andorra, Bahrain, Brunei, Costa Rica, Dominica, Grenada, Guatemala, Liberia, Liechtenstein, Marshall Islands, Montserrat, Saint Lucia, Samoa, Turkey, Uruguay and Vanuatu. These agreements are progressively becoming operative, once the agreeing country is listed as an “information exchange country” in regulation 44E of the Taxation Administration Regulations 1976 (Cth).
This Guide has been prepared for clients and professional associates of Baker & McKenzie. Whilst every effort has been made to ensure accuracy, no responsibility can be accepted for errors and omissions, however caused. The information contained in this publication should not be relied on as legal advice and should not be regarded as a substitute for detailed advice in individual cases. No responsibility for any loss occasioned to any person acting or refraining from action as a result of material in this Guide is accepted by individual authors or Baker & McKenzie. If advice concerning individual problems or other expert assistance is required, the services of a competent professional adviser should be sought.

Baker & McKenzie International is a Swiss Verein with member law firms around the world. In accordance with the common terminology used in professional service organisations, reference to a “partner” means a person who is a partner, or equivalent, in such a law firm. Similarly, reference to an “office” means an office of any such law firm.
